COMPANIES EPW Research Foundation

**HINDALCO** 

#### **Modernisation Plan**

A CAPTIVE power plant coupled with its own bauxite mines make Hindalco, a Kumaramangalam Birla group company and the country's largest integrated producer of aluminium, one of the most efficient and low cost aluminium producers in the world. The company generates approximately 97 per cent of its power requirements at a coal fired plant located near its manufacturing unit, while excess emergency electricity requirements are sourced from the local state electricity board. Hindalco owns leases for 10 bauxite mines and its subsidiary. Minerals and Metals, holds the mining rights for two mines. The company sources approximately 80 per cent of its ore requirements from these sources. Being an integrated manufacturer, Hindalco's operations cover all major areas of aluminium manufacturing from bauxite mining to manufacture of value added products and since its manufacturing facilities are located close to each other, minimum transportation of raw material and finished goods is involved.

The company closed the financial year ended March with a sales turnover of Rs 1,252 erore, up by 31 per cent from Rs 956 erore in the previous year. Provision for depreciation and tax rose by 6 per cent and 74 per cent respectively, in spite of which the net profit rose by 37 per cent from Rs 292 erore to Rs 401 erore. The boost to net profit came from other income, which rose from Rs 119 erore to Rs 173 erore, a rise of 45 per cent. Dividend payment has been stepped up from 55 per cent to 60 per cent. This has been supplemented by a bonus issue of two equity shares for every one held.

Hindalco's export revenue from fabricated products rose 77 per cent to Rs 39 crore, while ingot exports fetched Rs 67 crore, a rise of 45 per cent. Due to decline in LME prices, Hindalco focused more on the domestic front as price realisations were higher and stable at around Rs 65,000 a tonne. The ongoing modernisation and enhancement of semi-fabrication capacities will enable the company to lay increasing stress on export of value added products in the coming year.

While enhanced smelting capacity saw metal production at 1,75,398 mt in 1995-96 which was 7 per cent higher than the production of 1,64,280 mt in the previous year, a fire in the cold rolling mill saw production decline to 31,373 mt against 38,202 mt in the previous year.

Power generation during the year under review was the highest at 2,986 mm units, an increase of 3 per cent over the output of 2,899 mn units in 1994-95. The company

is also hereasing its captive power capacity by twainits of 67.6 megaunits each.

A mor modernisation plan on the anvil involve an expenditure of Rs 1,750 crore spreadiver a period of three years. In the process the capacity of the smelting plant would e increased to 2.42 lakh tonne per annumipa) and alumina to 4.5 lakh tpa. A 5,000 to a aluminium foil plant is being set up at Swassa. Simultaneously, the capacity of dowstream value added products is also being acreased. Power generation capacity at the tenusagar plant is being enhanced to 575 inv, with another 25 mw coming in from o-generation.

The company has obtained government appropriate for technical collaborations from Kaise Aluminium and Technical Services which is expected to improve smelter cost efficiency.

Dated by the growing emphasis on the autonobile sector, the company plans to set up a aluminium wheel rim plant and a diccasplant for forgings

To finance its expansion plans the company came out with a second GDR issue totalling \$ 00 mn during the year under review when was oversubscribed.

The company was awarded the ISO 9000 foits operations in totality. Two companies, namely, Renukeshwar Investments and Faance and Renuka Investments and Finance became subsidiaries of Hindalco during the year under review.

CENTURY ENKA

## **High Excise Duty**

Polyester filament yarn (PFY), a substitute for natural fibre which, when blended with natural fibre gives almost the same comfort at a cheaper price. Century Enka, a B K Birla group company manufacturing nylon filament yarn (NFY), PFY, polymer resins, engineering plastics and tyre cord fabrics, is one of the oldest and established players in the industry. The company operates on the batch processing system and manufactures polyester yarn from the chips stage, resulting in higher costs compared to other companies in the industry.

Century Enka has moved away from the dismal performance recorded last year and for the year ended March registered a sales turnover of Rs 439 crore, up by 61 per cent from Rs 247 crore recorded in the previous year. Other income moved up from Rs 10 crore to Rs 14 crore, a rise of 39 per cent. Provision for depreciation was down by 10 per cent. A whopping rise in the tax provision did little harm to the bottomline and the company closed the year with a net profit of Rs 28 crore, a major improvement from Rs 8 crore in the previous year. Dividend

payment has been stepped up from 22 per cent in the previous year to 27 per cent

Led by a boom in the automobile industry which translated into a strong demand growth for the company's nylon tyre cord fabrics, the tyre division performed to satisfaction. Sales of polyester industrial yarn increased. A plan for the expansion of nylon tyre cord/fabric capacity and modernisation and renovation of existing facilities are high on the priority list of the company. Capacity expansion of the PFY facility at Mahad is under way at a cost of Rs 150 crore. The plan for capacity expansion of PFY has been dictated by the uncertainty about the availability of cotton at reasonable prices.

Domestic polyester manufacturers are fast increasing their capacity anticipating a substitution of cotton fabrics with synthetics. Fresh addition to capacity of about 5,76,500 tonnes is in the pipeline which by the end of the century is expected to shoot up to 8,30,000 tonnes. Increased production and consumption of polyesters will meet the twin objective of substituting consumption of cotton with synthetics and substitute 1.05 million bales of cotton every year which can be channelised for exports. With textiles constituting 20 per cent of total exports this seems to be an agractive proposition. The budget for 1996-97 has lowered the import duty on purified terephthalate acid (PTA) and di-methyl terephthalate (DMT), inputs for the manufacture of PFY. It has lowered import duty on polyesters by 13 per cent which will result in imports becoming cheap but this has been sought to be counterbalanced by reducing the excise duty on PFY by 10 per cent.

Century Enka has promoted Rajashri Polyfil (RPL) to manufacture partially oriented yarn which can be further processed to make texturised yarn (POY). The company has 19 per cent equity participation in Centek Chemicals which it has promoted along with Century Textiles and Industries and Akzo N V of the Netherlands Centek Chemicals has set up a plant to manufacture polymerisation initiators which are used for manufacture of polyvinyl chloride, low density polyethylene, polystyrene, acrylic polymers, etc. The major users of these products are petrochemical industries and optical lens manufacturers. The plant was commissioned in July 1992, in Mahad, Maharashtra, at a capital outlay of Rs 12 crore and has performed satisfactorily

**DEEPAK FERTILISERS** 

## **Losses Wiped Out**

Manufacturing methanol and ammonium nitrate phosphate (ANP), Pune-based Deepak Fertilisers and Petrochemicals

Corporation closed the year ended March with a sales turnover of Rs 274 crore, an increase of 33 per cent from Rs 207 crore recorded in the previous year. Other income was down by 7 per cent. Interest costs were down by 3 per cent. Provision for depreciation moved up by 3 per cent. Like in the previous year, a zero tax provision helped the company record a net profit of Rs 33 crore, up by 20 per cent from Rs 28 crore in the previous year. The directors have not recommended any dividend.

After wiping out the losses incurred in the previous two years the company's efforts during the year under review were focused on improved market penetration for its ANP fertiliser and popularising the use of ANP as a balanced fertiliser. High capacity utilisation was achieved at the ammonia plant, a major portion of which continued to be captively consumed. On the other hand, plagued by problems in the synthesis section which led to a premature replacement of catalyst in the earlier part of the year and by inadequate domestic demand in the latter part, production at the methanol plant was less than satisfactory.

Deepak Fertilisers, hitherto manufacturing complex fertilisers, plans to add phosphatic nutrient to its product range by producing single super phosphate (SSP). Sources claim that the company is to set up a 1.32 lakh tonne SSP plant at a cost of Rs 20 crore near Nashik.

The company has tied up with a Spanish company to manufacture resins used in the petrochemical industry at an estimated cost of Rs 80 crore. Resins have multiple applications and are used basically in laminations and are used to replace wood in certain low density boards. The plant with a capacity of 30,000 tpa of resins will be fitted with suitable technology consuming less energy. The resin plant will come up at Taloja and will be commissioned in 18 months.

The company's ANP division continued to reel under the impact of the government's fertiliser policy of subsidising nitrogen nutrient through urea, whereas 50 per cent nitrogen nutrient in the company's ANP fertiliser does not receive any price support. Adding to the woes of the company is the recent upswing in global prices of phosphoric acid, a key input for ANP. If this scenario persists, ANP producers in India may find their margins getting further squeezed. Moreover they may not be able to jack up selling prices of ANP since farmers may switch back to urea. The policy of subsidising nitrogenous fertilisers discriminated against the use of other nutrients such as phosphatic and potassic fertilisers thereby leading to an imbalance in the application of nutrients. The government in its latest budget has sought to rectify the situation by giving a price concession of Rs 1,000 per tonne for phosphatic and potassic fertilisers but has left the subsidy on nitrogenous fertilisers untouched.

# Nuclear/CTBT Debate: Japan and India

**Achin Vanaik** 

In no country in the world is popular seniment against nuclear weapons and weaponisation as deep and videspread as it is in Japan. Unfortunately, nowhere else, certainly no in India, amongst that part of the public who think about such matter is there a comparable sensitivity and awareness on nuclear weapons related issues. The debate on the CTBT in India has been very one-sided and extraordinarily ill-informed.

I MADE my first ever visit to Japan on July 30 this year when I was invited for a fortnight by Gensuikin to visit Hiroshima and Nagasaki to participate in the commemoration of the 51st anniversary of the bombings. Gensuikin is the short form in Japanese of the Japan Congress against A and H Bombs, which is financially supported by Japanese trade unions. This year they held an International Conference in Hiroshima where they invited anti-nuclear peace activists and anti-nuclear energy activists from a number of countries - the US, France, Russia, Germany, South Korea and India - to discuss the general state of disarmament and arms control initiatives (including the Comprehensive Test Ban Treaty (CTBT) and the recent verdict of the International Court of Justice) as well as issues of nuclear energy and safety of plants, especially in regard to the situation in Germany, France, Korea, Russia (Chernobyl) and Japan itself.

Apart from this Conference there were mass rallies, peace marches numbering thousands, and open workshops on a range of issues. Several hundreds were present a each workshop. These took place both in Hiroshima and Nagasaki. It was, of course, both an immense learning experience as well as a very moving one for me. In no country in the world is popular sentiment against nuclear weapons and weaponisation as deep and widespread as it is in Japan. It is so powerful that those few in Japan who would like the country to go nuclear sometime soon in the future for the kind of 'national security' reasons that have become standard arguments in India, for example, simply cannot get their way

This is certainly not because the US provides a so-called security umbrella for Japan. Few people in Japan (especially in the light of America having dropped the bombs on Hiroshima and Nagasakı and never yet having apologised for it) are prepared to take this umbrella seriously.

Fel believe America would have in the pat or will in the future commit nuclear sieide in order to protect Japan from say. th former USSR or today's Russia Being th only country to have truly experienced the horror of a nuclear attack, average rablic sentiment is so hostile to the idea d legitimising nuclear weapons in any way to possessing them because the people elieve such a course makes Japan more not ess vulnerable, that it promotes not reduces nuclear hostilities and tensions. This average sentiment is in fact a deeper wisdom, than that which is possessed by arcane nuclear elites in other countries who by justifying nuclear weapons in the name of nuclear security have created the mess we are in worldwide.

In Japan those most vociferously opposed to nuclear arming are the left while it is the far right which most wants Japan to go towards arming itself in this way now or in the future. It is the strongest anti-American and anti-imperialist political forces in Japan. those most strongly against the US-Japan Security Pact who are also the most strongly opposed to nuclear weapons. This is in striking contrast to the situation here in India where many anti-imperialists and leftists have no hesitation in joining the right and centre in either demanding nuclearisation or at least the keeping of the option open. If India has a border dispute with China, Japan has its dispute with Russia over the Kurile Islands. But this never gives rise to the illusion that going nuclear will in any way help resolve the

In 1993, the Russian government released parts of an officially authorised study on Japan. Further sections were released in 1995 and 1996. This report said that if Japan at any point now decided to go nuclear then it could produce bombs in anything between 20 days and two months. The study also stated that the single most important barrier to Japan behaving in

this way was the "extremely impressive" public opinion against any such action. Furthermore, after all their careful investigation, the report stated that there was no evidence that there was even any movement in this direction within the Japanese government.

#### ONE-SIDED DEBATE IN INDIA

Unfortunately, in no other country, certainly not in India, amongst that part of the public who think about such matters is there any similar sort of sensitivity or awareness on nuclear weapons related matters. In India there has been a vigorous but very one-sided debate on the CTBT which has been extraordinarily illinformed. The biggest casualty of this debate has been the 'middle ground' of those who don't want India to sign the CTBT but also don't want India to either foreclose the option or to go ahead to test or exercise the option. This middle ground has been squeezed as never before and the pressure on India to test or exercise the option has grown to heights never before experienced. This is not because there has been any change in the external security environment regarding Pakistan or China but is solely due to the fact that a highly distorted debate in which those holding the middle ground failed to carve out a distinct space for themselves has enabled the hawks to run off with the agenda. A distorted debate has given rise to distorted priorities today.

A small section of us argued for India fighting to make a good draft of the CTBT even better and then signing it. This meant strengthening the preambular commitments to disarmament but not insisting as India did that there had to be a structural or procedural link between time bound disarmament and the CTBT. We also pointed out time and again, that there were powerful domestic lobbies in all the nuclear weapons states (NWSs) against the CTBT precisely because it was a genuine and powerful restraint measure on vertical proliferation, i.e., on obstructing qualitative weapons development. We also appealed in effect to the middle ground (and we did so repeatedly) that if you advocate India not signing the CTBT in the name of national security, do not try to hide the fact that the CTBT is a powerful restraint measure on the NWSs. In other words, pose the issue honestly as a choice between a presumed good (your particular interpretation of what serves national interest) and an actual, universal good which is the genuine efficacy of the CTBT. We also

argued that matters were too complex to be reduced to simplistic notions of the CTBT simply or primarily being a Machiavellian manoeuvre by the US to further its nuclear monopolistic ends. Today, the fact that the Republican Party has come out against the CTBT should alert anyone with even half-a-brain that the party opposes the CTBT not because it is against America maintaining its nuclear dominance but because it sees it as an obstacle to such a pursuit, as a concession to the arms controllers and moderators in their country precisely because the CTBT acts as a serious restraint on the US's nuclear weapons making capacities!

The same Indian elite which is prepared to swallow the IMF/WB structural adjustment programme which is inspired by a specifically Anglo-American rightwing understanding of economics called neoliberalism tries to parade its false anti-American credentials through a distorted presentation of the CTBT issue. The end result of the failure of those of the middle ground to oppose the hawks as well as ourselves means that today they have no defence against the triumphalism and jingoism surrounding India's opposition to the CTBT. It is this chauvinism and distortion of the real issues at stake that has created the climate where more people than ever are now saying that if the CTBT is as iniquitous as claimed then what is the point in India just refusing to sign it and doing nothing else Should it not now defy it by testing or going openly nuclear?

#### SENSITIVITY AND AWARENESS IN JAPAN

At the International Conference in Japan, every attending peace organisation representative argued that the existing draft of the CTBT for all its limitations was a powerful step forward in the right direction and that it would be a tragedy if it failed to go through. All these organisations have been opponents of nuclear weapons and energy policies of their respective countries. In Japan, there is a far more intelligent and informed discussion among experts about the CTBT than there has ever been among the anti-CTBT advocates in India. The Japanese peace movement has many, many more scientists, physicists, engineers, and technical experts of various kinds including those with a specialist understanding of nuclear physics, engineering and energy production. Two among many such prominent figures are Hito Umebayashi (University of Kobe) and Jinzaburo Takagi (Citizen's Nuclear Information Centre). Time and again the same point was made - computer simulation and sub-critical testing cannot enable new generation weapons to emerge without explosive testing. Moreover Fran Teplitz, the representative of Peace etion, the largest anti-nuclear NGO in e US pointed out that it was domestic rotest from many quarters including the peace groups that made the US government "indefinitely postpone" subcriticatests which were to have been held a June and September this year, and the with a CTBT in place they could confider a press in the future for complete abandouncnt of such subcritical testing.

Even more impressive was the extraordinarily high level of avereness among ordinary people about the imperance of the CTBT. Everywhere it was son as a vital step forward, necessary but not sufficient in itself, to move toward nuclear tree world. Perhaps one liking example can get across how pervasit this sentiment and how widespread the jublic awareness of the issues at stake whe. I won't talk about the badges so many were wearing, the banners, the marches the performances by children, the myriadways in which Japan does not allow itself to forget the ugliness of nuclear weapors, or the alacrity with which every step to ease tensions or move towards arms control and disarmament is followed. An ordinary Japanese pub that we happened to valk into one evening in Hiroshima called the Shanghai Renaissance had coasters for placing drinks) spread over all its talles which carried the motif of the CTBT and had reproduced on them published extracts concerning tests by the Americans, Freich and other countries! I kept one of these coasters as a souvenir.

At every public rally including the peace ceremonies in Hiroshima and Nagasati on August 6 and 9 (the dates when the bombs were dropped) the mayors of both cities appealed for the conclusion of a CTBT to the total assent of all Japanese up and down the country. In such a contex and setting, the audacious and utterly cynica claim by the anti-CTBT lobby in India that India's stand was not only necessary for pursuing its own understanding of national security but was also a courageous one in keeping with the interests of moving the world towards arms restraint and disarmament, could not but be seen as nauseatingly hypocritical.

One of the hollower claims made by those in the Indian bomb lobby in the last six months is that the public debate carried out for the most part in the English language print media on the CTBT has been a very open and fair one in which all sides have been able to freely have their say. The pro-CTBTers or anti-nuclearists, so the claim goes, have nothing to complain about when it comes to airing their views. Both

the media and general environment of public debate has been very fair to them.

Only those of us who have been in the virtual forefront of opposing India's nuclear weapons posture for over 15 years up to and including the CTBT issue know the problems and difficulties, the formal and informal pressures, that have been brought to bear upon us for the stands that we have taken. About our only consolation has been that India is different from most third world societies in being a weak bourgeois democracy, and this has certainly given us a space we could never hope to enjoy in most other third world countries.

Those who have some kind of a public profile as anti-nuclear campaigners have never amounted to more than what can be counted on two hands. Two of us, myself and my colleague, Praful Bidwai (who shares this Nuclear Notebook column with me) have been among this small group A brief account of what we have experienced over these years might help in getting across a rather different picture than the one of 'fairness' and 'generosity of democratic temperament' that is purveyed by those who know nothing of the pressures that have had to be faced by anti-nuclearists in this country. It is only to highlight the existence of such general pressures and constraints and not for any other reason that this brief and incomplete personal account is being given - constraints operating in one way or the other on all those who are prepared to challenge in public discourse the two sacred cows of the Indian establishment.

These two sacred cows are, one, the nuclear weapons posture and one, thinking of the Indian government and of the strategic community which in its overwhelming hulk is composed of ambiguists or hawks, and, two, the nuclear energy establishment of the Indian government. Secularism has long since stopped having such untouchable status. Launching the most vicious attacks on secularism no longer raises media and government hackles in the way that criticism of the two sacred cows mentioned above does. Even the left-directed print media is not always an exception.

#### MEDIA AND NUCLEAR QUESTION

For 12 years (1978-1991) I was on the editorial staff of *The Times of India*. Bidwai was with the same paper, also on the editorial staff, for roughly the same length of time, most of his tenure overlapping with mine. For all that period of time, both of us were acknowledged as having expertise on nuclear weapons related matters. We would regularly write editorials on global disarmament, superpower arms talks, etc.

We frequently wrote signed articles on the centre page about the need for global disarmament, on the superpower face-off, on the general problems of deterrence thinking. But not once did either of us write any editorial or signed article criticising directly the Indian government's stand or the mainstream wisdom on nuclear weapons. That was taboo.

Article after article by other in-house writers on the editorial staff and by outsiders, e g, members of the Institute of Defence Studies and Analyses, appeared on the editorial page defending the Indian government's position or even advocating going openly nuclear. Only rarely did The Times feature outsider articles with an antinuclearist point of view. But never was there a single article by either of us despite the fact that we were itching to attack the arguments of our opponents who had a free run of the pages in this regard. The main arena for such debate - the English language dailies - was thus effectively closed to us for over a decade. As members of the staff of The Times we obviously could not write for other newspapers, and we couldn't write in The Times itself. Our abstinence was not self-chosen. It was required of us by the then editor of The Times, Girilal Jain.

Girilal Jain was an editor of a very different kind from those of today. He was a strong editor who knew what he wanted, intellectually more relaxed and self-confident as well as more able than most of the existing breed. Because of his intellectual self-confidence and interest in the general play of ideas he had no difficulty entertaining our very leftist points of view on most issues despite our clear opposition to many of his Hindu nationalist or other rightwing views.

But on the nuclear weapons issue as it pertained to India there was never any such latitude. Since it was the editor's prerogative to decide what should appear, not only in the editorials, but on the editorial page, we had no option but to accept the restriction with as much grace as possible. The point is not that we consider this editorial prerogative to be wrong or misguided but that the objective effect was the reduction of the space available to an already small group with the desire and the ability to present a countervailing view on this question in the national print media.

It was only when I left employment in *The Times* that it became possible for me to intervene in the English dailies and magazines with my point of view on the nuclear question for India. Bidwai could do so only after Jam's reign. Earlier we had to confine ourselves to occasional writings in smaller circulation magazines which were reseen as rivals to *The Times* group. This was a condition of our employment. Stray ritings on this subject in sister publications like *The Illustrated Weekly* were suffect to prior clearance from the editor of *The Times of India*, a proviso which ared as a form of self-constraint.

But own in our career as freelance journalist there was always a problem. Fully awre of the unpopularity of our perspective with the editors of virtually every English anguage daily there has always been a ortain self-censorship in operation. For instance, I have been acutely aware that I hd to be very careful both about the tone I sed and the frequency with which I coust write on this issue. It would be naive the expect equal standards with those pushing the more conventional line. This was not merely because there were many more such writers favouring the government stand.

In ry whole five-year career as a freelance columns I have only ever had two articles turned down for publication. On both occaions this was done by the same national daily and of course both articles had to do with the nuclear weapons issue. One was a direct and aggressive but perfectly legimate response to a very well known Indan nuclear strategist who had mentioned meby name in a previous article for that pajer. I was however, politely informed when the article was returned to me that the paticular debate had been closed for the time being.

The other article was on the CTBT (on witch I, along with Bidwai and some other atti-nuclearists, can legitimately claim a reasonable level of expertise) which was returned without even being read. Earlier the paper in question had published occasional pieces by me on the nuclear issue and even many months earlier, on the TBT. This time apparently (but I have no way of confirming this) it was simply not to be entertained because it clashed with the views of their own in-house journalist on the issue. The major point, of course, is not that a paper does not have the prerogative to decide whether or not to publish specific articles, or that I wish to contest this prerogative. I do not But it would be naive not to recognise that there are different standards operating in very significant sections of the Indian print media in regard to this 'sacred cow' between those who are broadly on the side of the Indian government and those who are strongly against it.

#### DIFFERENT STANDARDS

The operation of such different standards became particularly evident when the debate over the CTBT sprang up over the last two years in the English and national dailies. Language that would have been (rightly) considered intolerable if it had ever been used by us in print was clearly and repeatedly acceptable when used by our political and intellectual opponents to describe those who believe India should sign the CTBT. 'Uncle Toms' and references to those who love 'American hegemony' or were its stooges or handymen, or words to the same effect, were commonplace. There was no direct reference to us but since accuracy and not immodesty presses me to point out that Bidwai and myself have obviously been in the forefront of whatever opposition there has been to the Indian stand on the CTBT we might both be forgiven for assuming that some writers using such language at least some of the time had us in mind.

In many ways such language was amusing. Both of us have been and remain committed socialists and activists of a strong leftist variety while the overwhelming majority of those using such descriptions are certainly not leftists nor for the most part socialists nor political activists. They do not even come close to approximating the record of consistent oppositionists to American or Western imperialism (among whom we count ourselves) but are mostly your average conventional member of the realpolitik school of strategic thinking for whom the taking of principled positions is intrinsically less important than rationalising shifting Indian adjustments to changing power balances - pro-American if need be on various issues, anti-American or the pretence of it if suitable elsewhere. But when so much mud is thrown then some of it in the eyes of some people (sometimes many people) will obviously stick.

That even acknowledged leftists can get carried away by their perceptions of the CTBT issue was brought to the fore by an astonishing attack on Bidwai by the editor of a fortnightly English language magazine for which Bidwai is himself a regular columnist. The editor carried a box item in the column pages where Bidwai was arguing his case on the CTBT, which not only formally dissociated the editor from the view carried in the column but unprecedentedly went on to assert to the reader that the columnist's views on the CTBT were "misconceived".

Usually in situations where the editor wishes to draw attention to the difference between a stated position and the editorial line or to attack the former, it is done in a separate editorial. To do that is at least to argue the case out and let the reader decide for himself or heiself. At most there might appear on the relevant pages a box stating that the views presented herein are those

of the writer alone and the editor does not agree with them. But to use the word "misconceived" and thus throw the authority and weight of the editor and the magazine to bias the reader in this way against the said column represents nothing but the most astonishing arrogance. It is a violation of all journalistic and editorial norms and ethics. It is doubtful if in the said magazine there has been in the past such an editorial disclaimer in this particular or equivalent form for any other issue. If so, it is equally wrong. It is to condemn without deigning to give editorial counterarguments to the precise case being made in that particular column.

Three subsequent letters to the magazine which criticised the editor for this form of disclaimer met with a determined refusal to acknowledge any mistake and only a repeated assertion without substantive argument that the editor was right to do what he did because Bidwai's views were misconceived. This time an unbalanced response and a misuse of journalistic power and responsibility towards a critique of the 'sacred cow' came from a prominent member of the Indian left. To my own amazement, news of this reached peace groups abroad. Out of the blue in Japan, one peace activist in America asked me whether it was true that something like this had happened. He thought it was in one of the national dailies and I informed him it had happened in a fortnightly.

#### RUMOUR MILL AT WORK

Finally, and quite unsurprisingly though perhaps most obscenely and damagingly, there has been the rumour mill. In Delhi it has been hard at work. We can make no direct accusations as to the various sources and sanctions for such rumours against us. That is in the nature of the process of slander by rumour. We can only speculate in informed ways. In this context, to put it most carefully and politely, the hypothesis that such rumours partly originate and have sanction from very high official positions and sources, is unproven and probably unprovable, but should not for that reason be dismissed out of hand as an intelligent and pertinent speculative conjecture.

These rumours enjoy wide currency in journalistic circles in Delhi as well as in other circuits. We hear of them directly as well as through friends and relatives. We have not only been dubbed as paid American agents for our stand on the CTBT but are said to have made a packet of money, and that our lifestyles as a result have been vastly altered.

Our book, Testing Times: The Global Stake in a Nuclear Test Ban was brought out by the Dag Hammarskjold Foundation,

a Swedish Foundation with a long istory of involvement with peace is and problems of the South. It structural connection with the infitutions of the American nuclear ate or establishment. It has covered at costs of production, distribution and avertising (press conferences in Geneva and Delhi, etc.) of the book while neither of us have asked for or received one paisa for our writing endeavours. Of course we would be naive to think that such rungurs will disappear with such a disclaimer. The book (incidentally, no member of the Indian strategic community has ever bothered, despite the prolonged wo-year dehate, to do the hard work required to produce any book of comparabe scope and depth to present their own persective) is only a peg and an unimportat one for these rumours. The fundamental purpose of such rumours and theirspreading is to try and discredit the vews of people like ourselves but withou reference to our arguments or to the legitimate contestation of them according to all normal protocols of logic and rational discussion. It is to attempt to discrelit our views through aspersions on our character and honesty.

For many among the anti-CTBT rowd in Delhi (and elsewhere in India) it reems

impossible to accept that there can be peop who for no ulterior motives (moneta or otherwise) are prepared to argupublicly and insistently that India is wron not to sign the CTBT; who also argue the while there are the hypocrisies and deceif of other countries (particularly of the NW; and of their mainstream strategic expert to contend with, there are also the hypocrisity of our own country and of its mainstread discourse to contend with.

Such people are mistaken. Just mistaken are those who have too ros eyed a view of the democratic and tolera character of the arena of public discour on this issue in India. But to both I can gi an assurance that the commitment presenting an anti-nuclearist view at understanding on nuclear weapons relate issues in the public print media of Ind remains unshaken and unfazed, indeunfazable. Lest I have given a fal impression by writing down this revie of the constraints and pressures some us have faced, let me also say that matter how irritating, offensive and unfi these practices have been, it is a smi and easily bearable price to pay f adopting what I and others believe is principled and strategically wise stand take if we are to have any hope of movitowards a truly nuclear weapons-free wor

# RECONFIGURATION OF INDIAN POLITICS: STATE ASSEMBLY ELECTIONS, 1993-95

## The Citizen and Politica Finance

A G Noorani

The Supreme Court's judgment on the petition of H D Shourie on the maintenance of audited accounts by politica parties is a powerful blow for the cause of free and fair elections. The udgment has been rightly lauded, but its nuances need to be better unerstood.

THE citizen is entitled to be governed only by those who truly represent him, who derive their mandate from free and fair elections. This implies necessarily that he is entitled to the guarantee that the elections will be free and fair. Any form of corruption or intimidation vitiates the poll. So does the unfettered play of political finance.

The Supreme Court's judgment on the petition of HD Shourie, director of Common Cause, is a powerful blow for this noble cause. It has been rightly lauded. But its nuances need to be understood. In issue are three statutory provisions. Section 293A of the Companies Act, 1956 prohibits altogether a government company or one of less than three financial years' standing from making any financial contribution "directly or indirectly" to any political party or "for any political purpose to any person". Any other company may, however, make such a contribution not exceeding 5 per cent of its average net profits during the three immediately preceding financial years and if its directors authorise the making of the contribution.

Section 13A of the Income Tax Act, 1961 came into force only on April 1, 1979. It exempts income of a political party from tax only if three conditions are met-namely, it keeps and maintains books of accounts properly enough, keeps also a full record of each contribution of over Rs 10,000 with the name and address of the contributor and audits its accounts. Except the CPI, the CPI(M), the DMK and the AIADMK, no other political party filed returns of its income as required by the law. The BJP began filing returns only on December 28, 1995.

The third provision to be noted is Section 77 of the Representation of the People Act. 1951 on election expenses. On October 3, 1974 the Supreme Court delivered judgment in Kanwarlal Gupta vs Amarnath Chawla in which it ruled that expenditure incurred by a political party, not for "general party propaganda" but directly for furthering the prospects of a particular candidate must be included in the returns of the candidate's election expenses and is, therefore, subject to the limit provided by the law for election expenses. Within a few days thereafter, an ordinance was promulgated which was reenacted as Act 58 of 1974. Explanation 1 was inserted in Section 77 to provide that any expenditure incurred in connection with

the electron of a candidate by a political party or evernly any other body or persons or by any indidual other than the candidate shall not fall within the purview of Section 77.

The upreme Count's recent ruling did not constitute judicial activism so much as sheer enforcement of the law, particularly Section 13A othe Income Tax Act. The Court found "total naction on the part of the government" to enorce it. Justice Kuldip Singh, who delived the judgment on behalf of himself and astice Faizan Uddin, observed:

The political parties have—in patent violation of aw-neither maintained audited accounts ne paid tax since 1979 80. Sub-section (4B) of Section 139 of the Income Tax Act mkes it obligatory for the chief executive oficer of every political party to furnish a rturn of income for each year in accordance with the provisions of the Income Tax Act. section 142(1) provides for inquiry before ssessment. It is not disputed that notices inder Section 142(1) were issued by the ncome tax authorities to the defaulting political parties but despite that the returns of income have not been filed by the said parties. Failure to furnish a return of income has been made a criminal offence punishable under Section 276-CC of the Income Tax Act. It leaves no leeway. The mandatory provisions of the law have to be enforced. It is common knowledge that there is ostentatious use of money by political parties in the elections to further the prospects of candidates set up by them. Display of huge cut-outs, etc. of political leaders on roadsides. crossings, street corners, etc., and setting up of arches, gates, hoardings, etc, at prominent places and printing of posters and pamphlets are some of the ways in which money-power is displayed by the parties...

He added:

We have no hesitation in holding that the political parties who have not been filing returns of income for several years have violated the statutory provisions of Income Tax Act. The income tax authorities have been wholly remiss in the performance of their statutory duties under law. It was mandatory for the income tax authorities to have put in motion the statutory machinery against the defaulting political parties. The reasons for not doing so—as disclosed in the counter-affidavits—are wholly extraneous and unjustified. The political parties are not above law and are bound to follow the same.

A political party which is not maintaining audited and authentic accounts and is not

filing the return of income before the income tax authorities cannot justifiably plead that it has incurred or authorised any expenditure in connection with the election of a party candidate. The expenditure "incurred or authorised in connection with the election of a candidate by a political party" can only be the expenditure which has a transparent source. Explanation 1 to Section 77 of the Income Tax Act does not give protection to the expenditure which comes from an unknown or black source. Such expenditure, therefore, does not quality for the exemption which Explanation 1 provides.

Thus did the Court connect Section 13A of the Income Tax Act with the proviso to Section 77 of the R P Act. Rightly so because both are designed to ensure transparency. But what is the *sequitur?* That the expenditure by the party is *included* in the returns of the candidate? The court did *not* draw such an inference, not even if the party did not keep accounts.

What the Court said was that

A candidate in the election who wants to take the benefit of Explanation 1 to Section 77 of the R P Act-in any proceedings before the court-must prove that the said expenditure was in fact incurred by the political party and not by him. Any expenditure in connection with the election of a candidate which according to him has been incurred by his political party shall be presumed to have been authorised by the candidate or his election agent. But the presumption is rebuttable. The candidate shall have to show that the said expenditure was in fact incurred by a political party and not by him. The candidate shall have to rebut the presumption by the evidentiary standard as applicable to rebuttable presumptions under the law of evidence.

An entry in the books of account of a political party maintained in accordance with the Income Tax Act will suffice.

Construing Article 324 of the Constitution, which vests in the Election Commission the 'superintendence, direction and control' of elections, the court ruled that this would "include the scrutiny of all expenses incurred by a political party, a candidate or any other association or body of persons or by any individual in the course of the election. The expression 'conduct of election' is wide enough to include in its sweep, the power to issue directions-in the process of the conduct of an election-to the effect that the political parties shall submit to the Election Commission, for its scrutiny, the details of the expenditure incurred or authorised by the parties in connection with the election of their respective candidates." Thus, even while the polls are on the EC has the right to intervene. But, the judgment strengthens the EC and election law only up to a point. Explanation 1 to Section 77 of the R P Act still remains on the statute book. The Court's interpretation dilutes it but does not and cannot wipe it out.

would like to highlight the immense growth potential of the tobacco and cigarettes industry, its economic dimensions and related opportunities.

The reduction in surcharge in corporate tax and intended changes in the Companies Act are moves in the right direction. This growth orient ed Budget ments praise for judiciously balancing economic growth with social priorities.

The Honbic Finance Minister, however has chosen to impose what has been termed a "modest" increase in specific duties on cigarettes. The hike ranges between 5% and 7.5% for most categories. However in the case of small plain (micro) cigarettes, duties have been raised by 25%. This will slow down growth of this segment, which was otherwise enabling rapid expansion of the tobacco industry's tax base.

The Gigarette industry is extremely sensitive to excise taxation, which is the single largest element in the price of eigarettes (helt taxes on eigarettes compared to other tobacco products have enseed a decade long simp in eigarette volumes in India. It was only last year that the industry surpassed volumes achieved in 1981-85. The huge potential of the tobacco industry in India remains largely untapped to appreciate the dimensions of the opportunity to improve foreign exchange earnings. Government revenues, farm incomes and their multiplier impact on the rural economy, it is necessary to examine global trends.

#### THE GLOBAL TOBACCO MARKET

There is a widely held perception that globilly tobacto is a declining industry. This is not so. The Food and Agricultural Organisation has forecast an annual growth rate in global tobacco production and consumption at around 1.9%.

Global cigarette consumption has grown by 22% since 1980 and was estimated at 5,422 billion sticks in 1995. Cigarettes constitute the principal form of tobacco usage in virtually every market of the world and account for 85% of global tobacco consumption by volume and 93% by value Tobacco is a major source of revenue to Governments in both the developed and emerging markets and cigarettes contribute the loops share of such recenues.

Consumer sperituring on tobacco products varies considerably among countries and regions Annual per capita spend exceeds US\$200 in North America and Western Europe, whereas in the developing South Asia, including

India, it is less than US\$5. The key trends impacting the tobacco market are a move towards low delivery products incorporating light tobaccos and a confined shift from traditional forms of confimption to cigarettes.

#### THE INDIAN TOBACCO FARKET

India is the 3rd largest paducer of tobacco in the world. A total of \$50 million kgs of tobacco was produced in 196 Only 80 million kgs were used for domeste cigarette production and 55 million kgs expoled as cigarette tobaccos.

Developments in the Indiar tobacco industry have not been in line withinternational trends. The share of cigaretis in the total tobacco consumption in Indials about 20%, compared with 85% hobally. Internationally, there has been a shift frum traditional forms of tobacco. Chewing Bobacco, Snuff, Pipe, Cigar/ Cheroot – to cigarettů, which is recognised to be the modern and more acceptable form of tobacco usage. Qite the opposite, however, has happened in Inda The share of cigarettes has declined to 20% from 23% in 1971, while overall tobacce consumption has grown. In fact, industry viluines of cigarettes declined by 12.5% between 1984-85 and 1994/95 before staging a recovery in 1995/96

Whilst the annual per capita consumption of all tobacco products in India stands a=0.83 kg, about 45% of the world average of 1.85 kg, the per capita consumption in clearette form is barely 1/10th of world levels (

There are approximately 200 million tobacco consumers in India, of which only 25 million smoke cigarettes, whereas 275 million in China smoke cigarettes out of 330 million tobacco consumers.

The United States tobacco industry is perhaps the best example of how this industry should be structured to contribute significantly to the economy. The United States is the second largest producer and consumer of tobacco products in the world. The country has one of the lowest rates of excise duty and still collects over \$10 billion in revenue. It is estimated that on a purchasing power parity basis, cigarette excise intensity per capita in the US is less than 5% that of India. The relatively lower rates of tax have helped the industry invest in brands and quality upgradation enabling the United States to be the largest exporter of cigarettes in the world with a growing share. The quality of tobacco grown there is the best in the world and even though the price of American tobacco is high, exports constitute over 30% of production Exports of tobacco and cigarettes are reported to be the 6th largest contributor to the US balance of payments and rank 2nd in the country's exports to Japan In comparison, even though India is the 3rd largest producer of tobacco in the

world, its economic potential is largely untapped.

#### a) Adding Value to the Rural Economy

Tobacco is grown in India by small and marginal farmers, mainly in non-irrigated soils, on land holdings of less than 25 hectares. About 400,000 small and marginal farmers grow eigarette tobaccos and over 600,000 grow non-cigarette tobaccos. No crop other than cigarette tobacco gives the farmer as attractive a return consistently in similar agro-climatic conditions. Cigarette tobaccos offer returns more than two times those of non-cigarette tobaccos and comprise mostly the flue-cured variety, which are sold through government-conducted aution platforms with a minimum guaranteed price (MGP) to the farmers. As a result, the better the quality of tobacco the farmer produces, the higher his return, with a minimum return guaranteed by the MGP,

The Indian tobacco market is oriented heavily towards traditional forms of consumption. Our tobacco farmers produce larger quantities of non-cigarette tobaccos (which are not exportable), and orgarette tobaccos of low grades, since the bulk of Indian orgarette consumption is not in the upper and premium segments. Measures therefore need to be adopted to

- facilitate transition from non-cigarette forms of consumption to cigarettes in line with consumer aspirations and international trends, so that farmers increase their incomes by producing more cigarette tobaccos.
- upgrade consumption to the higher end, to enable farmers to produce premium quality tobaccos, which can also be exported.

Severe taxation of cigarettes is an indirect tax on tobacco farmers. In 1951/52 farmers growing cigarette tobaccos contributed Rs 4 03 per kg towards excise duty and farmers growing other tobaccos Rs 1 12 per kg. While the burden on other tobacco farmers increased marginally to approximately Rs 11 per kg by 1994/95, the indirect tax on cigarette tobacco farmers increased steeply by 95 times to Rs 385 per kg during the same period. The huge tax increase on cigarettes has inhibited cigarette form of consumption, thereby artificially restricting potential earnings of tobacco farmers and thus suboptimising tobacco's contribution to the rural economy.

#### b) Enhancing Foreign Exchange Earnings

Global demand is restricted to cigarette type tobaccos of specified quality. India's tobacco exports at Rs 421 crores are minuscule, given the size of our tobacco market. Less than 20% of India's entire tobacco production is exported.

In comparison, Brazil with a tobacco market smaller than ours, exports 60% of its production, and is the world's No.1 tobacco exporter with annual-exports averaging more than 3 times that of India's

As stated earlier, the principal reason for our export potential remaining largely untapped is the low quality of tobacco produced.

India is capable of producing the premium grades of Burley semi-flavourful and flavourful tobaccos. While current annual production of Burley for instance is the region of 8 million kgs., is achievable by the turn of the century with the right inputs

#### c) Enhancing Government Revenue

#### i) Excise:

Revenue collection from the tobacco industry by global standards, is modest. The reason lies in the small taxable base of cigarettes. Almost 90% of Government revenues accrue from cigarettes, leaving 88% of tobacco consumers effectively outside the tax net. Any proposal to increase revenues from the tobacco industry must facilitate growth of the revenue contributing sector. The non-cigarette segment of the tobacco industry which accounts for over 80% of consumption, is unorganised and fragmented, thereby making revenue collection from this segment impractical to administer. An increase in the share of cigarettes within the tobacco basket must, therefore, be the key objective of any effort to raise revenue

India's population has a very wide band of income de tribution. High rates of taxation on organettes have artificially kept organettes beyond the reach of a large number of tobac co-consumers aspiring for organetic form of tobacco consumption. The route to optimising excise revenue collection is an excise duty structure that enables marketing of cigarettes for each income segment of tobacco consumers.

In 1987, the Government of India rationalised and modified the excise duty structure for cigarettes. Ad valorem duties were replaced by specific duties based on cigarette length. The objective was to introduce a more lational system of excise levy and to reduce lingation associated with advalorem duties. The Government created 5 excise slabs based on length and type of cigarettes, with rates increasing from plain cigarettes at the low end to international size filter cigarettes at the top end. The change has been highly successful on all counts and the Government must be congratulated on this innovative step of aggregating the advantages associated with both ad valorem and specific duties.

This structure still however left cigarettes beyond the reach of a large number of aspiring tobacco consumers. Recognising this, in 1989 the Government introduced a new excise slab for micros at the low end. The rates of duty, however, remained too high to have had the desired effect. The Government in 1994, therefore, boldly experimented with a sharp reduction in the excise duty on micro cigarettes reducing it from Rs 120 per 1,000 to Rs 60 per 1,000. The industry responded by passing on the entire reduction

to considers. As a result, a dormant segment office cigarette industry was infused with grath. In 1995/96, this segment contributed its 90 crores to the National Excheque up from just Rs 7 i erores in 1993/94

The orise structure needs to be reviewed aeriodically to ensure that the excise slat correspond to income distribution ptierns of tobacco consumers. The structing should provide easy steps for upgradate of consumption to ensure built-in høyancy as per capita incomes increase. Such a structure would eliminate the ged to review excise rates frequently. The rates at the upper end need to be lovered to favour production of cigarettes whin the shores of India and render mecompetitive the smuggling of cigaretts, which denies the National Excheque an estimated Rs 200 crores in revenu annually.

In 19<sup>5</sup> view, the structure is largely in place **'be general** table of excise duty rates bwever, are too high and should ideally be brought down in a phased manner Moreover, the introduction of one c two more slabs would facilitate upgralation of consumption in an orderly manter.

A '48 punitive and rational excise duty structure would enlarge the tax base and increase revenue manifold over the next 5 to 0 years.

#### ii) Local Taxes:

Lane revenue collected from cigarettes is divised between the Centre and the States in a sitio determined by the Central Government. Over the veins, this ratio has progressively increased in favour of the States. As a result, the States share has grown considerably, faster, than overall excise collections.

State Governments have for many years leaved local taxes on eigeneties in spite of the 156 agreement. The States argue that they are only restricted from levying Sales Tax on agarettes by the agreement and are tree to impose other state and local taxes. Such a stand deleats the entire purpose of the store sharing system, which was created to risuite free flow of cigarettes throughout the country.

As our economy globalises, manufacturers in India should be able to leverage the synergistic benefits of our large common market. The proliferation of varying taxes at the local level would negate this. The issue is vital for the tobacco industry and suitable legislation needs to be enacted to make single point taxation fully effective.

#### d) Government Regulation

In the West, tobaccound cigarettes have become synonymous, unlike in India, where nearly 88% of consumers do not smoke cigarettes. Any effort to regulate the tobacco industry therefore must take into account the industry's ability to comply. To regulate just the 12% cigarette.

segment would defeat the very purpose of such regulation.

Statutory health warnings have been mandated by law on cigarette packets and all eigarette advertising material since 1975. The law was extended to chewing tobacco in 1980 and gutka in 1900. Other tobacco prodacts are still not required to carry any statutor ity warning. Obviously, the statutory health warning requirements on tobacco consumption need to be uniformly applicable to all tobacco products.

Regulation of cigarette advertising is a hotly debated subject the world over Contract to general impression, advertising does not necessarily help to expand consumer demand for a product group, especial ly for mature product categories like cigatettes. Not does a ban on advertising necessaidy reduce consumption. The role of advertising is to inform consumers of product differentiation in features and value, intensify competition thereby encouraging quality upgradation, thus providing better value to the consumer. Advertising is a legitimate commercial activity employed for products that are legally grown, processed and marketed. The absence of advertising for tobacco would be a form of unintended social engineering, almost implying that 200 million adults are unable to take decisions related to per-

In as many as 29 countries, Governments permit tobacco companies to advertise their products on the basis of a voluntary code.

Cigarette manufacturers in India have already agreed to evolve and adopt a voluntary code. In the interests of consumer, given the fact that many adults do make personal choices in favour or otherwise of tobacco use and only about 12% of tobacco users sincke organities there is a strong case to adopt a voluntary industry code towards advertising rather than resort to legislation.

#### CONCLUSION

India is a large market. Continued reform of the tax structure and moderation of excise rates for eigarettes would:

- Provide the basis for upgradation of consumption.
- Meet consumer aspirations in line with international trends.
- 3) Enlarge foreign exchange earnings.
- Increase Government Revenues.
- Bring the multiplier impact of increased farmer incomes to the rural economy.
- Provide Indian manufacturers a growing base to invest in brands and technology -> compete effectively.

Your Company's well positioned to take the leadership role in the process of realising this potential and thereby contributing to the well being of all stakeholders. Hook to your continued support an our endeavours.

CONTRACT ITC 31: 96

**NEW DELHI** 

## **High Cost of Wooing Foreign Capital**

BM

As the government's wooing of foreign investors has become more arder, the latter have stiffened their terms. The government's own room for manoeuvre has grown progressively restricted because the 'reformer' in the government have chosen to almost exclusively focus on foreign investment as the prime issue in the making of economic policy.

IN SPITE of the vigorous efforts since 1991 to attract foreign capital, the results achieved so far are evidently not at all satisfactory for our zealous economic reformers and globalisers. They find that the 'safety net' of direct foreign investment in particular has failed so far to provide a solid material basis and psychological impact for them to carry on with the IMF/World Bank/WTO reforms. The spate of bilateral treaties with developed countries and far-reaching 'incentives' guaranteed to foreign investors by these treaties and arrangements entered into with IMF/World Bank/WTO has not helped very much either to attract foreign capital on the scale as, for example, China has been able to do, they ruefully say. The Economic Survey 1995-96, of the finance ministry bemoaned that hardly \$ 4 bn of foreign investment could be arranged in 1995-96 as against the supposed need, for direct foreign investment of as much as \$ 30 bn per year for the successful implementation of the reforms. The common minimum programme of the UF government is more 'realistic and modest' with a target of \$ 10 bn of DFI annually, which was set at the instance of P Chidambaram as the barest minimum. The finance and industry ministries have taken up this target as their priority task to achieve. They are making frantic efforts in this direction.

Side by side with approval of the conditionalities attached to pending foreign investment proposals, policy guidelines to boost foreign investment are being further 'liberalised'. Foreign equity has been raised upwards from 51 per cent to 74 per cent in projects for approval in an enlarged list of industries. It is proposed to allow foreign companies to set up their wholly-owned subsidiaries even when they may be already holding stakes in joint ventures with Indian business interests for the manufacture of the same products. It is being argued that foreign investment proposals which have backward linkages with agriculture, generate employment or promote exports will be allowed in non-priority areas as well as the consumer

goods sector. The supposedly fanciful fistinction between priority and non-priority areas is thus being summarily extinguished. Wholly-owned subsidiaries of foreign companies are bound in particular to cut into he business of joint ventures. The manufacture of toffee, chewing gum, oats and soft drinks and setting up of cinema complexes have been approved with great enthusiasm. These approvals make a mockery of the proclaimed priorities of the UF. They cannot be related to either technological upgradation or improvement of international competitiveness of Indian industry.

The small industry sector has not escaped the attention of the globalisers. The investment ceiling for small industry units is proposed to be lifted from Rs 50 lakh to Rs 3 crore because the low ceiling is considered inadequate for attracting foreign investment into the small-scale sector. Further, it is proposed to revise downwards the export obligation of joint ventures on the ground that a heavy export obligation discourages foreign capital flow, especially into the small sector. The reservation of items for production in the small-scale sector is ceasing to be of much value when same or similar items are allowed to be produced by large corporations, specially units which go in for foreign investment and imported technology. These proposals are bound to result in the transformation of the role and performance of the small industry sector. Labour intensity in the small sector will be adversely affected and the sector will produce items which will be costly and serve the upmarket in India or will be exported. Small units will cease, in an increasing measure, to be relevant for the mass market. The fact to be reckoned with in this context is that the Indian market, relative to population, is small. The mass of the people with low incomes cannot generate effective demand for the sophisticated and costly goods either imported or manufactured in India by foreign capital directly or in collaboration arrangements with Indian business, big or small. The attempts to attract foreign investment to satisfy the demand of the middle and upper classes, which hanker after international quality products, mean lower priority for investment to produce goods and services for the mass of the people at affordable prices.

The drive to attract foreign capital on a grand scale has its implications for the balance of payments as well. These implications are obfuscated by the self-styled reformers fired up by the idea of globalisation. The acute balance of payments position in 1991 and the strain of servicing foreign debt exercised a restraining influence for some time. But now the reformers seem to have become reckless and are no longer shy of playing with the 'comfortable' exchange reserves of \$ 17 bn with the Reserve Bank of India. They are now excitedly talking about letting the current account deficit rise to as much 3 per cent of GDP, against 1.6 per cent which had so far been considered the safe and sustainable limit. A current account deficit of 3 per cent of GDP, it has been argued, squares neatly with the target of \$ 10 bn of foreign investment per annum. How and when this target will be reached and the effort and costs - economic, social and political - that will be involved may not be debated at this stage. But it will be foolhardy for the globalisers and their political representatives in the Deve Gowda government and for those supporting it from 'outside' not to pay heed to the words of caution recently spoken by the governor of the Reserve Bank, C Rangarajan. He warned that there should be no further drop in the foreign exchange reserve which had suffered an erosion of nearly \$ 4 bn in the last 12 months. The current account deficit which has already swelled to 2 per cent of GDP should not, therefore, increase further. Rangarajan also drew attention to the piling up of payments obligations for the current year which are likely to increase in the wake of the rising levels of imports, including of consumer goods, and the rising costs of foreign investment, both direct and institutional. A rise in external commercial borrowings, with shorter and shorter maturities, which is being encouraged is not a remedy but a prescription for disaster. The inflow of NRI funds and volatile portfolio investments will add to the uncertainty and pressures. The much sought after direct foreign investment is really no panacea. The experience of the last five years shows that it is geared to strengthening the control of foreign investors, especially TNCs, on the productive assets of the country rather than augmenting them. Reliance on foreign investors, with high rates of return guaranteed to them, for the development of the physical infrastructure of the economy too means and raw materials from their own sources at negotiated rather than competitive prices. It cannot, therefore, help improve the balance of payments and may, on the contrary, strain it to an extent that India may be pushed back into a payments crisis.

It is remarkable, however, that the constituents of the United Front, even its left component, are indifferent to the implications of the Deve Gowda government's policy on foreign investment. They seem to be taken in by the notion that direct foreign investment is 'risk free'. In fact multinational corporations are becoming more and more aggressive. They are demanding high and quick returns and their unhindered repatriation. They enjoy the political-strategic support of their countries of origin and the international financial institutions. Those already in business in India are keen to end any semblance of Indian participation in their operations. They are putting in reverse gear the Indianisation of personnel and are raising their equity stake and tightening the control of the headquarters over management systems, technology introduction, marketing operations and use of brand names.

India's credit rating was deliberately pulled down to 'speculative grade' when the Rao government launched its 'reform programme' under foreign direction. The position in this respect has not changed. The nuch-advertised improvement in the balance of payments and in exchange reserves in the ast five years has not brought about any significant change in the country's relationship with foreign investors. They are not willing to soften their demands. These are becoming more stiff The fact is that there s less and less room for the government to nanoeuvre. Liberalisation and globalisation nave visibly emasculated Indian business interprise. The right of the Indian people to I fair share in the gains from growth too is being sidetracked or openly derided. Populis: gestures and rhetoric cannot under this lispensation carry conviction. The Deve Gowda government is really neither willing for able to extricate itself from the growing network of foreign conditionalities on the firection of economic growth. With foreign nvestors, in particular transnational corporations, enjoying a commanding position n the Indian market, investment is bound o flow into the production of goods and services of elitist interest and generate ninimal new employment and incomes in ndia. The repatriation of high returns on oreign investment will drain away in an ncreasing measure the national wealth. The oreign investors will bring technologies to extract high profits from the exploitation of ndia's natural resources, labour and conumers. Except for what may be called the comprador business interests and a handful

viproressional managers, technicians and mrketing specialists, in the direct employment of transnational corporations or Indian big business, the working people can gain little and will lose a lot as capital-intensive ecolomic growth and labour-displacing techologies make headway. Investment will be gared to developing the market for the satisaction of a thin upper crust of society and production and supply of essential goods and ervices will tend to be limited. These tendincies have already become manifest in the last five years. With the 'deepening' of the conomic reforms the mass of the people are bound to suffer from loss of gainful emiloyment, shortages and high prices.

The forthright 'reformers' in the Deve Gowda government like to focus on foreign investment as the prime issue in the making of economic policy. That there is much

more to any meaningful and substantive reform of the political power structure, social relations and development process than attracting foreign capital is beyond their comprehension. Their exclusive concern is with attracting foreign capital as the basis of economic growth and 'modernisation' of the economy. The economic reforms with the emphasis on open door policies for foreign capital have already enabled comprador business interests and reactionary social forces to gain economic strength. social respectability and political clout. They have to be combated by the mobilisation of the mass of the people and their struggles for equitable and self-reliant socio-economic development which must not be allowed to be subdued by the false pretences of political parties and personalities which still flaunt their progressive commitments.

## NATIONAL ACCOUNTS STATISTICS OF INDIA 1950-51 to 1994-95

The EPW Research Foundation has just released the above publication which contains a comprehensive set of time series on almost all aspects of national income statistics of India for 45 years from 1950-51 to 1994-95. Each set of the CSO's data presented with a description of concepts and compilation methods and also with brief critical comments on them.

## **Army in Nagaland**

The army and paramilitary forces have been in the north-east for four decades now. Over these years their continued presence has undermined the civil and legislative authority over the area and has brought a high degree of uncertainty and insecurity to the lives of ordinary people. The centre's imposition of extraordinary laws on regions by declaring them as 'disturbed' also has serious implications for the federal nature of our polity. The findings of the D M Sen Commission highlight some of these realities.

THE Armed Forces (Special Powers) Act, in force in the north-eastern states since 1958, has provided the basis in law for the virtually permanent presence of army and paramilitary forces in the region. On April 3, 1995, the government of Nagaland constituted a one-man Commission of Enquiry with Justice D M Sen, retired judge of the Guwahati High Court, to probe into incidents of shooting, arson and rape by various paramilitary forces in Akhulato, Kohima and Mokokchung (all in Nagaland) occurring between December 1994 and March 1995. The findings of the Commission, submitted to the Nagaland government on March 16, reveal how the continued presence of paramilitary forces on a long-term basis undermines civil administration, the powers of the judiciary and the importance of the legislature, thus bringing the situation as close to army rule as could be imagined.

On March 5, 1995, a convoy of the 16 Rashtriya Rifles (RR) was going from Bishnupur in Manipur to Dimapur in Nagaland. The convoy had 63 vehicles with five officers. 15 JCOs and 400 jawans, and stretched over five kilometres. According to the RR, its convoy came under sustained attack over that distance at several places, and hand grenades were lobbed at them at three places. They had to fire in self-defence. Seven civilians were killed and 20 injured, including 16 in mortar attack. These, the army claims, were victims of crossfire that continued for 20 minutes.

Six civilian eyewitnesses, including havaldars of the Nagaland police, have a different story to tell. They said that a tyre of one of the convoy's Shaktiman trucks burst, and the RR personnel started shooting immediately, thinking that they were being attacked. They also fired mortar shells in a town with civilian population. It also appears that sustained firing by RR personnel continued from 1.30 pm until after 3.30 pm. The firing included 1.207 rounds of gunfire and five rounds of mortar fire. All six witnesses were absolutely certain that there was no attack by, or exchange of fire with, supposed insurgents. Besides attacks on residents, it appears that RR personnel deliberately attacked property, damaging buildings and houses. They then prevented the injured from being treated. One depanent in his affidavit before the Commission tells of how a two-inch mortar bomb fell ca his doorstep, killing one of his family members instantly and injuring eight others. Later, he was stopped by RR personnel while taking the injured to hospital, as a result of which another member of his family died on the way to hospital. The version of the civilian eyewitnesses is corroborated by two state officials. The then superintendent of police (SP), Kohima, who went around the area with army officials, found no bullets or blank cartridges in the places from which insurgents were supposed to have fired at the convoy. He did however find pieces from mortar shells and splinters from grenades.

Justice Sen is in no doubt whatsoever that the RR personnel, including officers, "acted in a most irresponsible manner", that the firing was "accompanied by cold-blooded murder of innocent civilians, some within their residential houses", and that "mortar shelling in one of the most thickly populated areas of Kohima township was completely unjustified—almost amounting to barbarity." He also finds that some R R personnel "showed utter disregard for civil authority," and asserts that the 16 Rashtriya Rifles personnel were solely responsible for the casualties and damage to property.

On January 23, 1995, at around 3.50 am, some insurgents opened fire upon a post of the 15 Assam Rifles stationed in Akhulato, Nagaland. The exchange continued until 5 am. Then subedar Khelaram and 15 jawans of Assam Rifles went in pursuit of the insurgents. Unable to find them, the armymen encircled some houses, got the people out, poured k-rosene on the houses and burnt them. They had suspected the residents of being sympathetic to the militants and harbouring them.

Hozheto Sema, a farmer, and his wife were asked to put down their children and come out of their house. They refused. A jawan fired at Sema. She died and the hand of her three-month-old child was blown off. Subedar Khelaram was tried by general court

martial and was awarded 45 days rigorous imprisonment, eight years loss of seniority and four years loss of pension. Five others were also awarded rigorous imprisonment.

Justice Sen found this action to be inadequate. He deemed the initial firing by the Assam Rifles "legitimate, preventive and defensive," but asserted that "once the insurgents had broken contact, there was no need for further firing" by the Assam Rifles. The arson was "unjustified" and the killing of Sema "cold-blooded murder". He notes that there was "no state government official entrusted with maintenance of law and order in the near vicinity", and that the conduct of the Assam Rifles personnel in this particular case "was a sheer act of criminality with no nexus to any legitimate operation in aid of civil authority."

On December 27, 1994, a patrol of the Maratha Light Infantry (MLI) near the Police Point in Mokokchung, Nagaland was fired upon by some insurgents. One Jawan of the MLI was killed. One insurgent died in the return fire. Another was chased and shot dead. The JCO died while attempting to charge a house with insurgents inside. The Commission notes that the firing was "started by the insurgents", and that "the preventive and punitive action taken by the Task Force of 16 MLI" was "fully justified and in no way excessive" What followed after the initial encounter was however "completely indefensible".

According to the accounts of several civilian eyewitnesses, the MLI doused woollen balls and other inflammable material with petrol and set houses and shops on fire, while civilians were still trapped inside. Five civilians were burnt alive inside their houses. Three others died despite being able to come out of their houses. Four women were raped at gunpoint. These women were medically examined by the honorary secretary of the Red Cross in Mokokchung, and had the courage to depose before the Commission. Several people were beaten badly. The Red Cross official deposed: "I saw army people beating innocent public until they were unconscious-I heard army jawans shouting and encouraging each other to torch buildings and shops".

The army claimed that the houses caught fire as a consequence of the initial grenade attack and the snapping of high tension wires. They said that the fire then spread naturally in the wind. On the basis of the topography, the distance of the houses, and eyewitness accounts, Justice Sen refuses to accept this version of the army, and finds the arson deliberate. He also finds the complaints of rape and molestation "fully substantiated".

In these three incidents, the Commission recommended that:

(1) Ex-gratia compensation of Rs 2 lakh

be given in each incident of murder and rape; (2) The alleged crimes be investigated and tried under the Army Act; and (3) A technical commission be set up to assess damage to property.

In each of the three incidents above, the army directly prevented the civil administration from discharging its official duties and ensuring the safety of citizens. Justice Sen emphasises that the legitimacy of an army operation under the Armed Forces (Special Powers) Act, derives from its being in aid of civil power, and not in superseding it. On the basis of section 3 of the act and its findings in these three incidents, the Commission indicts the army for bypassing the civil administration completely, and recommended that: (1) The army should not search or raid any premises or detain any person without the prior consent of the local police, and that it should ordinarily be accompanied by the local police; (2) Any person arrested by the army should be handed over immediately to the police; and (3) Interrogation should be carried out only by

The civil administration in the three towns had no prior knowledge of army movements in the area. The Armed Forces Act allows the army to act on its own initiative. Section 5 of the act merely stipulates that the army shall hand over any person arrested to the nearest police station "with the least possible delay, together with a report of the circumstances occasioning the arrest". The act, therefore, does not specify a deadline within which the army has to hand over arrested persons to local police, and submit a report on its operations. In effect, the army is given licence to detain persons indefinitely, and not inform the civil administration at all. This directly contradicts the provisions of S 130 of the CrPC which allows only an executive magistrate "of the highest rank" to summon the army if necessary, to disperse an assembly "likely to disturb the public peace" (S 129, CrPC). Thus, under ordinary law, the army acts under the direction of the civil administration, it can act independently only in exceptional circumstances, and then only for a limited period of time.

Besides undermining civil administration, the Armed Forces Act also allows for wide, virtually unlimited use of force. Ordinarily under the CrPC, a magistrate's warrant is needed to make an arrest. Even when the army is summoned, the CrPC also enjoins minimum use of force, to "do as little injury as possible to person and property" as possible (S 130(3)). It allows only commissioned and gazetted officers to decide the degree of force necessary in each situation. In sharp contrast, section 4 of the Armed Forces Act gives the power to act independently to personnel down to the rank of havaldar. The degree of force allowed is

alo extraordinary: powers to open fire to the extent of causing death, destroy any structure, arrest and search without a warrant. The sweeping powers granted by section 4 of the act, therefore, effectively make section 3-calling the army in aid of civil power-redundant.

The incidents at Kohima, Akhulato and Mokikchung are not isolated events of killing and excesses by the army. There have been and ontinue to be, other attacks on lives. Overthe last year, at least 10 people have died neustody alone, of forces which include the 12 Assam Rifles, the 132 Battalion CRPF, the 5 Maratha Light Infantry, the 3 Artillery Brigade and the 3 Parachute Regiment. At leas 77 others were tortured in camps. People hav: disappeared and women have been rapd, sometimes in the presence of their fanily members. On May 20, 1995 an MLA T (hongo was blindfolded and taken to Mckokchung by army personnel, in spite of identifying himself. He was released only ater the intervention of the DIG and Alditional SP, Mokokchung. And these figures represent the picture only partially, since in many parts of Nagaland as well as oher states in the north-east, it is not even rossible to get information except sporadically.

Since the enactment of the Armed Forces Act in 1958, the army and paramilitary have been present in the north-eastern states for four decades. In certain areas such as Akhulato for example, they even used to administer the area. Their continued presence undermines civil and legislative authority over the area. In 1987, the chief minister of Manipur and his council of ministers sent an extraordinary memorandum to the union home minister, which said: "Civil law has ceased to operate in Senapati district of Manipur due to excesses committed by Assam Rifles with complete disregard shown to civil administration. The Assam Rifles are running a parallel administration in the area."

The centre's imposition of extraordinary laws on regions by declaring them as "disturbed", also has serious implications for the federal nature of our polity. The centre operates under the logic of "national security", which local bodies and legislative representatives are exposed to local pressures that oppose autocratic laws. Thus, in 1972, the CPI(M) government in Tripura opposed the centre's declaration of parts of the state as "disturbed" so as to bring the Armed Forces Act into operation in those areas. And widespread public protests impel state governments to appoint Commissions of Enquiry to investigate excesses by the army in the course of its operations. The Armed Forces Act not only denies such democratic opposition any legitimate avenues of protest, it also makes it extremely difficult to punish any excesses of authority. Under section 6 of the act, the state government is denied the power to prosecute army personnel guilty of crimes, without the prior permission of the central government. This is in keeping with the Commissions of Enquiry Act as well. (S 2a(1)), read in tandem with Items 1 and 2, List 1 of the Seventh Schedule of the Constitution, which decrees that in any enquiry relating to the armed forces and defence of India, the "appropriate government" empowered to conduct an enquiry is the central government.

Put simply, this means that only the centre can sanction or conduct an enquiry into crimes committed by the army. It is in this context that the army's as well as the ministry of defence's responses to the D M Sen Commission need to be seen. As is the regular practice of most authorities whose conduct is being probed, the army attempted to delay and even halt the Commission's proceedings. They challenged the competence of the state government to appoint a Commission that would probe army action. This was rejected by the Commission. The army then got the hearings adjourned to move the high court. Rejected there as well, they again got the hearings adjourned to move the Supreme Court. In the meantime, since the Commission was no longer informed of proceedings in the case, it commenced hearing the evidence on December 15, 1995, and submitted its findings in March 1996. On March 27, as the state government was examining these findings, the ministry of defence applied to the Supreme Court to pass a stay order and maintain status quo.

The incidents of killing, arson and rape by personnel of Assam Rifles, Rashtriya Rifles and Maratha Light Infantry occurred over a year ago. They were widely reported in the local press, demonstrations were held in Delhi, and the National Human Rights Commission was approached to conduct their own enquiry into the incidents. Through this entire sequence of events, the central government has been mactive. They have not even instituted an enquiry. Instead, they moved the Supreme Court to effectively halt action on the findings of the D M Sen Commission of Enquiry. Meanwhile, the Nagaland state assembly has accepted the findings of the Commission. The state government and legislature are, therefore, pitted in direct confrontation with the central government and the army.

Perhaps this is inevitable when the only authority empowered to investigate and prosecute armed forces personnel guilty of crimes, is the very one which has sent them there in the first place. Rule of law demands that an independent body or institution must enquire into an infringement of law. That no agency or persons can sit in judgment over their own acts. In these incidents, the

# Research and Information System for the Non-Aligned and Other Developing Countries (RIS)

Zone IV, Fourth Floor, India Habitat Centre Lodhi Road, New Delhi – 10 003

#### Director, RIS, invites application for the following posts:-

Fellows: (Rs. 3700-5700): A high second class M.A. in Economics, Ph.D. Degree and post doctoral research work for at least four years in the field of international economics, or development economics or allied fields. Acquaintance with quantitative methods of analysis and computer programming desirable.

**Research Associates:** (Rs. 2200-4000): A high second class M.A. in Economics with knowledge of quantitative methods of analysis. Desirable: Experience of two years or Ph.D./M.Phil degree and working experience on computer/micro processors.

In addition to pay, allowances are admissible as per RIS rules, which are at par to those admissible to Central Government employees. Detailed Bio-Data should be sent to Director, RIS by 30th September, 1996.

#### RESEARCHERS REQUIRED

The CEHAT (Centre for Enquiry into Health and Allied Themes), a non-profit health research institute having offices in Mumbai and Pune, needs experienced and committed researchers to work on two of its research projects. Appointment will be for the duration of the project, 12 to 18 months only.

Project: I: Post: One Junior Research Officer:

Study of household expenditure on women's health, in Mumbai and Nashik district. The first phase of data collection in Mumbai is over. Candidate should be capable of handling quantitative and qualitative data collection, analysis, report writing and extensive travelling in rural areas. Capacity to interact with local people and working knowledge of Marathi and Hindi essential.

Project: II: Posts: One Research Officer, One Research Assistant:

Preparation of computerised health sector database with programming for people's education and advocacy. Candidate must have some understanding of statistical database, knowledge of computers, analytical and writing skills.

#### Qualification:

Research Officer: Ph.D. or post-graduation in any recognised discipline or graduate in professional courses. Experience of 3 to 5 years essential.

Junior Research Officer: Ph.D. or post-graduation in any recognised discipline or graduate in professional courses.

Research Assistant: Graduation or post-guiduation in any recognised discipline.

Please apply with detailed biodata and salary expectations before September 10, 1996. Only short listed candidates will be called for interview at our Mumbai or Pune office. Please mention your contact telephone, fax numbers or email address in the application.

## The Coordinator CEHAT

519 Prabhu Darshan, S.S. Nagar, Amboli, Andheri West Mumbai 400 058. Tel: 625 0363, Fax: 620 9203

Email: admin@cehat.ilbom.ernet.in

state government and state judiciary were prevented from prosecuting army personnel. The central government's inaction thus renders the army accountable to none.

In 1982, the PUDR together with the Naga People's Movement for Human Rights (NPMHR) petitioned the Supreme Court for the repeal of the Armed Forces (Special Powers) Act. The case has moved very little over the last 14 years. The findings of the D M Sen Enquiry Commission point to excessive use of force by the army. These powers are given to the army by the Armed Forces Act. The deadlock over further action

or the findings of the Commission, is also an autcome of the provisions of the act itself.

ipilogue: The Supreme Court has now vacated its stay on the state government's action on the Commission Report. What course events will take now remains to be seen.

#### Note

1 Thescope of each enquiry was to: (1) discover the circumstances leading to the firing; (2) ascutain whether firing could have been aveted; (3) find out the persons responsible; and 4) suggest measures to prevent recurrence of uch incidents.

# **CM's Meeting on Narmada Dam**What Did Not Happen

Sanjay Sangvai

The decision on the height of the Narmada dam, being projected as an outcome of the meeting of the state minsters of the three riparian states of the Narmada, is in reality a decision of the prime minister which, for the moment, papers over the difference among the three states.

IT all started with the innocuous announcement by the prime minister, H D Deve Gowda on August 2 at a meeting with over 500 tribals-peasants from the Narmada valley at Delhi. The people had come to the capital to protest against an unjust and illegal decision to raise the height of the dam up to 436 feet and re-starting the work on the dam which has remained suspended for more than 18 months, since January 1995. After the meeting the newly appointed home minister, Indrajit Gupta, the people met the prime minister and appraised him of the situation regarding the dam, its cost-benefit and the displacement, submergence. The prime minister was accompanied by the three concerned ministers, Janeshwar Mishra, minister for water resources, B S Ramoowalia, minister for social welfare, and Nishad, the environment minister. He assured them that he was in favour of keeping the displacement to the minimum and had announced that a meeting of the four chief ministers and 15-20 representatives of Narmada Bachao Andolan would be convened for discussing rehabilitation and other issues regarding the dam. The NBA had, then, welcoming the initiative wound off its dharna in Delhi to prepare for the proposed talks.

The union water resources ministry had sent an invitation to NBA on August 3, to which the organisation had responded positively.

There was no significant reaction from the Jujarat government or the power-holders and pro-dam forces for the first few days.

The reality of the prime minister's proposition dawned on the pro-dam forces somewhat late this time. And they started rearing up for a showdown. It is interesting to see the evolution of the pro-dam forces in Gujarat through these years. The political lumpen elements from both the main political parties, Congress and BJP, have been clubbed with crstwhile Gandhians like Babubhai Patel and Chunni Bhai Vaidya. There were other organisations like ARCH-Vahini (A-V), who despite their socialist leanings chose to oppose the NBA on very irrational grounds and who now are realising their mistake. It seems that the progressive forces like A-V are no more with the pro-dam forces as they were in 1990-94. The erstwhile Gandhians too, at least, are not vocal to the earlier extent. A substantial chunk of progressives and Gandhians now seem to have distanced themselves from the political lumpens, as Sanat Mehta, the former chairman of the Sardar Sarovar Narmada Nigam (SSNNL) is out of the prestigious post after BJP had come to power in Gujarat. Chiman Bhai Patel, the wily former chief minister and Mehta combined all these forces to oppose NBA in Gujarat. Thus, one could see the officebearers of builders-contractors association, chamber of commerce, Vyapari Mahamandal, Travel and Tour Association, and the pseudo-religious leaders of Swaminarayan sect or those of Moraribapu hob-nobbing with Gandhians, progressives and academics. Now that the cementing factor is no more, these elements do not see eye to eye. Thus, a spokesperson of 'Narmada Abhiyan' K Z Patel could bring out a paper against the apathy of the state leaders towards Narmada Project and that report was criticised by another pro-dam element the Gujarati daily, Loksatta.

However, with the announcement by the prime minister, again the non-government organisations launched their tirade against the NBA and the decision to invite the NBA for the meeting. NGOs like the Gujarat Aids-Cancer and Narmada Bachao Trust (GACNBT), 'Narmada Abhiyan', and umpteen others including the Chambers of Commerce president Dinesh Shah, Traders Organisation, etc, harped on one point-how can the NBA be equated with the state chief minister? That too the chief minister of Gujarat? The chief minister was told not to attend the chief ministers' meeting and he obliged declaring that he would not attend the meeting keeping in mind the 'asmita' and 'swamaan' (pride and self-image) of Gujarat.

Meanwhile, these NGOs had chalked out an agitational programme including a dhama in Delhi on August 13 for which they contacted their MLAs, including the widow of a former chief minister Urmilabehn Patel. They planned a media blitz in Delhi or filing a public interest litigation petition and organising meetings of political parties in Delhi, distributing pamphlets educating the public about the project. (Tol., Ahmedabad, August 7). They alleged that the meeting with Medha Patkar and her collegues of NBA was a way of delaying the construction of the project and the people of Gujarat would not tolerate this, they warned.

Various contradictory statements were made regarding the so-called agreement between the four states on July 16. In fact there was no agreement among the states, but only a decision by the prime minister as was revealed later. Gujarat and Madhya Pradesh had different interpretations regarding the minutes and decisions in the meeting. Yet, the pro-dam elements had presumed that the 'agreement' in the July 16 meeting allowed the unhindered construction of the contentious dam.

To cap it all, the chief minister of Gujarat met the prime minister on August 8 and hau pressurised him to cancel the meeting of August 16. The Gujarati language press carried screaming headlines about the chief minister heroically announcing the gains-or rather the success-to the press. Though, life in Baroda or Ahmedabad was totally unaffected by whatever had (had not) happened on the Narmada front, one gets the impression from the Gujarati newspapers that a fierce battle was being fought. Whenever the Narmada issue, particularly the anti-dam tribal-peasant movement is in focus, Gujarat's politicians and the media create a war-like hysteria and a frenzy, which

has virtually no relation to the reality within that region.

The ruling BJP had a stake in stalling any move for talks on Narmada and showing its enthusiasm for the Project. Of late, the state BJP party has been affected by dissidence in the party and loss of credibility on a number of counts. Also, the work on the dam has been suspended since January 1995. There has been a perceptive slackening of the work on the project as the BJP had come to power and the announcement of another project 'Kalpsar', had further confused the situation-as it was projected as the panacea to provide drinking water to the water a starved Kutch, Saurashtra, thus robbing the Sardar Sarovar of the claim of being the only project for these drought-prone areas. Therefore, it was necessary for the BJP government to get the suspended work on the dam resumed-or make a show of such an achievement. That was done when the Gujarat chief minister claimed that an agreement had been reached on the dam height and resuming the work on the dam, to which the MP immediately disagreed. Another setback would have been ruinous to the credibility of the government. At the same time the Sardar Sarovar Bond is expected at any time and the Gujarat government wants to project the SSP as a profitable proposition. For all this it was necessary not to have any meeting with the NBA.

However, as Medha Patkar said in her reaction to the letter communicating the 'postponement' of the meeting, why did the central government led by United Front easily succumb to the pressure by Gujarat and other BJP ruled states? It is nothing but the convergence of vested interests. What sort of consensus politics is it? Be it the Cauvery, Alamatty dam or the Narmada dispute, the states have never tried to involve the people in the decision-making process; and whenever such an effort seemed to have been made, political leaders try to scuttle the possibility. About the Sardar Sarovar dispute. previously government of Gujarat tried to oppose any move for the review of the project and the appointment of the five member expert group in 1993. There have been only two countervailing forces in this stubborn attitude of the state apparatus-the people's struggle in the valley and the ongoing hearing in the apex court. On August 13, over 1.000 tribal oustees from Gujarat villages held an impressive rally and meeting at Kevadia colony, near the dam and challenged the government to restart construction work on the dam. They demanded their participation in any decisionmaking regarding the dam and their fate. And on August 14, the Supreme Court refused to revoke the stay on the dam construction. Both were fitting replies to the adamant attitude of the state.

# HEKS %

HEKS, SWISS INTERCHURCH AID is committed to work for peace and justice in solidarity and partnership. It is jointly supported by the churches, the government and individual donors from Switzerland. HEKS is a conscious, active member of the etumenical networks for development, relief and refugee work and for human rights.

HEKS is dedicated to improvement of social-political-economic situations of the underprivileged and marginalized people in the rural areas in India since 1958. HEKS India Co-ordination Office located in Bangalore works in close co-operation with the programme office responsible for India located in Zurich, Switzerland.

HEKS has commenced a search process for the appointment of CO-ORDINATOR, HEKS India Co-ordination Office.

The Co-ordinator will be responsible for

- Identification, co-ordination, monitoring and review of projects
- Networking among partners, ecumenical groups and churches, national and international NGOs and development agencies
- Planning, implementing and reviewing HEKS India programme.

The person must be around 40 years with a sound understanding of development work, and a minimum of three years of managerial experience in a similar position. Fluency in English and Kannada or Tamil are essential. Experience in dealing with international agencies and proficiency in computer systems are desirable. Women candidates are also encouraged to apply. The job requires extensive travelling in India and once a year to Switzerland.

Applications with a detailed CV that includes education and work experience must be sent only to the consulting firm retained for the search process. No enquiries will be entertained at HEKS. Apply within 0 days of this announcement to:

248, 13th Cross, Wilson Garden, Bangalore 560 027.

# Managing World Fisheries Third World's Loss

Ramakrishnan Korakandy

The FAO's strategy for fisheries management is aimed at ensuring a steady supply of fish to the developed world and full employment of the fleets of the advanced distant water fishing nations.

THE unilateral extensions and declarations of territorial rights by coastal states, particularly in the early and middle 1970s, largely anticipating the outcome of the third Law of the Sea sessions, had prompted the FAO's search for solutions to the problems of changed global fishing rights, powers and control. The Law of the Sea, even in the making and control. The Law of the Sea, even in the making and finally by its adoption in 1982 of the 200-mile exclusive economic zone, had threatened global fishing fleets of the distant water fishing nations, of their eventual displacement by domestic fishing vessels of local states and of the resulting excess capacity in fishing fleets and installations of the distant water fishing nations. It was also feared at that time that this would eventually affect the global fish supplies and the economies of the distant water fishing nations. The impact of the fall in supply was expected to be severe in the developed countries of Europe and America, which are the major importers of fish from the distant water fishing nations. The FAO, as the watchdog of developments in global fisheries was called upon to checkmate the developed countries' strategy.

The FAO's strategy for fisheries management aims at ensuring a steady supply of fish to the developed world and full employment of the fleets and installations of the advanced distant water fishing nations Any development threatening this prospect was criticised by the FAO. The strategies developed by the FAO since the beginning of the 1970s are clearly illustrative of this. The major components of this strategy are: (1) restraint on development of industrial fisheries in developing countries, (2) emphasis on small-scale fisheries in third world countries, (3) creation of private property rights in fisheries, (5) promotion of joint venture fishing in third world EEZs, (4) development of aquaculture projects in third world countries and (6) promotion of free trade in third world countries.

The FAO has been quite critical of the expansionist policy of fisheries development followed by some of the developing countries [FAO 1983]. The growth-oriented industrialisation of fisheries has been branded as 'fish-oriented', 'anti-people', 'ecologically unsound' and 'economically inefficient'. The slow 'accretion' of mechanised fishing fleets in the developing countries

was deemed to be a potential threat to the freeaccess of the distant water fishing fleets of the developed nations.

The Technical Conference on Fisheries Management and Development held at Vancouver in 1973 under the auspices of the FAO and the Fisheries Research Board of Canada emphasised as a starting point, the need to have a global plan for fisheries minagement and the wisdom to 'operate inernationally'. The keynote address by the assistant director general of FAO noted "..many developing countries are intensely interested in expanding their participation n world fisheries and some have already become significant participants. In doing his developing countries encounter special problems in reconciling the establishment of modern fishing industries with the improvement of their prevalent artisanal fisheries...Today there is a much wider view that management and development must not be thought of separately; conservation is increasingly seen as a subsidiary objective..." Pinpointing the expected outcome of the Conference, the Assistant Director General said "there will emerge some answers that will have at least fairly wide application and will serve as general principles and criteria to guide those responsible in governments and international organisations and in the fishing industry itself in improving management and promoting develoment".

The Conference, articulating the role of FAO in the 'development of fisheries in developing countries', noted that "joint ventures usually involving an enterprise in an economically developed country and a government or other enterprise in a developing country, were a suitable mechanism to effect the transfer of essential components of viable enterprise, including capital, technology and managerial skills". This strategy decried any 'independent' effort by developing countries to develop the industrial fleet as 'wasteful', 'slow accretion' process. In its implication, this strategy only legitimised the interests of the developed world to carry on fishing in the EEZ of developing countries by other means.

The Report of the Expert Consultation on the Conditions of Access to the Fish Resources of the Exclusive Economic Zones published by the FAO in 1983 further carried the thinking of FAO in this regard. In one of the papers presented for the Consultation, Paul Adam sought to defend distant water fishing in foreign EEZs by developed nations. He observed the main

motivating factor behind the new regime of the sea was that it would be necessary for ensuring the protection of the common heritage of mankind. If the implementation of such a noble principle leads to the scrapping of boats which are still operational. even if it is a loss borne by one national only, it cannot be considered as good management of the world resources. Furthermore, and economically more important, if the value of the common heritage is, as regards the living resources of the sea, assessed at the landing stage without any consideration of the processing and marketing chain, it excluded the largest part of the added value generated by the fishing industries taken as

The greatest restraint of FAO on expansion of industrial fisheries by third world countries was based on socio-economic and ecological arguments. The Report of the Expert Consultation on Strategies for Fisheries Development in 1983 noted "in the integrated approach of national and fisheries planning, the development targets of the fisheries sector should be guided by four criteria of global rationality, i.e., social desirability, economic feasibility, ecological suitability, and efficient use of energy".

Many western-aided studies too have subscribed to this rationality. For instance, see Jean-Philippe Platteau, Jose Murikan and Ettinne Delbar's study Technology, Credit and Indebtedness in Marine Fishing – A Case Study of Three Villages in South Kerala, Hindustan Publishing Corporation. 1985. An early World Bank staff working paper (also echoed the same thinking [Emmerson 1980]).

FAO's latest strategy to dissuade the developing countries from embarking on any ambitious programme for the development of EEZ fisheries is to restrain them on grounds of precaution, sustainability and responsibility. This requires that the state intending to develop the new fisheries should establish the possibility of its survival, or rather its sustainability. In other (words, the burden of proof to this effect rests with the state and in its absence it should abandon the plan of expansion. The Convention of Responsible Fisheries promoted by the FAO and adopted by the UN at Cancun in 1992 severely restricts the option available to the developing countries to expand their fisheries to the EEZ.

The central plank in the FAO's strategy for manneuvring fisheries development in third world countries is its programme of assistance to small-scale fisheries. This strategy emphasised the development of artisanal or small-scale fisheries in the fisheries development plans of the Asian and African countries. It was intended to curb the enthusiasm of radical planners in third world coastal states from venturing

into any large-scale modernisation and industrialisation of their fisheries. The activities of the several FAO regional fishery bodies such as the Indian Ocean Fisheries Commission's work and the Indo-Pacific Fisheries Commission are also clearly in tune with this strategy.

One of the major programmes for fisheries development initiated by the FAO in the region, the Bay of Bengal Programme (BOBP) aims at promoting the small-scale fisheries of the region by improving the fishing craft, fish handling techniques and distribution methods. The BOBP's current extension programmes stretch to new areas. to educate the fishermen on the virtues of 'self-management', 'participatory learning', etc. One of its recent publications caricatures a picture of non-involvement of fishermen in the development process initiated by national governments in third world countries and presents the BOBP-sponsored alternative of a new development strategy based on participatory rural appraisal (PRA). To enlist maximum people's participation in the BOBP programme, it plans to organise village groups and "to educate them of their past, their history, culture and economy". In one context it speaks of 're-creating' the history of the village by such methods as "using elders as resource persons for the very early history, with group support for more recent events" (see Peter Colaco and Tim Bostok in Bay of Bengal News, No 51, 1993, BOBP. Madras). It advises the PRA group to ask such questions relating to the village as "when did the community come to live in the village, major events, major crises, major achievements, epidemics, tidal waves, the coming of electricity... and so on". It reminds one that "there is always some offloading of accumulated mental and attitudinal baggage to be done, if we are to be openminded enough for real participative planning". There is a pinch of persuasion to dissent from the nationalist path, in this advice.

#### PRIVATE PROPERTY RIGHTS

One of the coveted principles of fisheries management in the neoclassical thinking, has sought to establish economic efficiency by eliminating common property rights in fisheries. The creation of private property or sole ownership rights has been, however, resisted by fishermen everywhere and it has remained 'commonwealth', particularly in 'ocean fisheries'. But, now the FAO, with the help of the 'expert consultations', has succeeded in incorporating this principle, albeit in a disguised form and through the back door. The FAO has introduced such concepts as 'self management' and 'territorial use rights in fisheries' (TURF). Recent report of the FAO notes "effective management of fisheries is essential. It requires a fundamental institutional change, entailing the creation of forms of use right to the resource... A market for the resources would facilitate the resolution of conflicts on the basis of the amount the parties would be willing to pay to protect their interests" [Christy 1982]

Self-management or management by the fishermen themselves of their industry is advocated by the FAO and its 'consultaits' on grounds of economic efficiency (least cost method) and ease of implementation. TURF involving exclusive use rights to the community is recommended in the case of enclosed fisheries using small craft, gear, pots, etc, in burrows, bays, engulfed regions, etc, in the inshore regions as also on grounds of economic efficiency and administrative convenience. It is best suggested for traditional fishermen communities livingin pockets or enclaves. To promote the TURF or community management of small-scale fisheries, FAO also favoured a programme for development of artificial enclosures for fish, by giving exclusive rights to the fishermen or their community over the area. TURF by vesting private property rights in coastal fisheries has stealthily created a market for fishing rights and a basis for extending the same logic to other fisheries at international levels. Tacitly, it has succeeded indivesting national governments of their constitutional roles and responsibilities for managing their fisheries and bringing it under the control of market forces.

Joint ventures in fishing in third world EEZs has been the most used tool in the hands of the FAO and the distant water fishing nations to perpetuate the control and access to the stock of the EEZ of third world coastal states. Even prior to the passing of the Law of the Sea, the FAO had convened the Technical Conference for Fisheries Management and Development at Vancouver in 1973. One of the outstanding recommendations of the Conference was that "... the FAO should consult with governments regarding the further role it could play in enhancing the participation of

# CONCOT PARTICIPATORY RURAL APPRAISAL

Participatory Rural Appraisal: Methodology and Applications
 Neela Mukherjee Rs. 200

The book describes applications of PRA in understanding of poverty, wealth ecology, gender and health, illustrates some policy measures flowing from such application, discusses the limitations posed to the use of PRA and the opportunities which PRA offers as a participatory methodology.

2. Participatory Rural Appraisal and Questionnaire Survey: Comparative Field Experience and Methodological Innovations/Neela Mukherjee (Foreword by Robert Chambers)

KS. 20

It attempts to compare conventional methods of investigation like questionnaire survey with participatory methods like PRA. The recent empirical evidence has raised issues, opportunities and opens up potentials for methodological innovations.

3. Community Appraisal of Natural Resources (in Press)
It explains Community Appraisal of Natural Resources in a participatory framework and describes the major methods to approach people's participation with regard to the forestry sector.

### **CONCEPT PUBLISHING COMPANY**

A/15-16, Commercial Block, Mohan Garden, NEW DELHI - 110059 (INDIA) Cable: CONPUBCO Fax: (011) 5598898 developing countries in fishing industries, including studies on how joint-ventures could be made more effective."

Promotion of joint-ventures for large-scale exploitation of the EEZ of Asian and African countries has been effectively canvassed by the FAO. In 1974, the FAO published a compendium on Joint Venture in Fisheries [Crutchfield et al 1974] outlining, among other things, the economic climate for joint venture in fisheries, prospects for promoting joint ventures, factors influencing decisions to enter into joint ventures, organisation of joint ventures, elements of success and failure, role of international agencies, monitoring of joint ventures, formation of joint venture companies, their operation and legal provisions governing their operation. The joint venture concept has helped in maintaining the status quo in third world fishing by luring many third world administrations to joint venture and chartering agreements with advanced countries. Many national governments with severe constraints of knowledge, funds, organisation and technology have succumbed to the short-run pressures of international negotiating agencies and fishing companies. It is also feared that corrupt bureaucracy in many of these countries had also behaved like the 'jagirdars' of the medieval period in extracting rent from the resource.

The FAO has promoted the interests of distant water fishing nations through other means as well. While writing on the Options for the Management of Tuna Fisheries in the Indian Ocean, William T Burke and Francis T Christy (1990) noted: "... the Indian Ocean tuna body (should) have an area of competence that includes all waters both within and outside of national EEZs ..." and "maximum benefits cannot be produced if the fisheries in the EEZs are not included. A strong regime for high sea fisheries alone would create incentives for the distant water states to focus their effort within the zones of the coastal states that offer the best deals ... Separate regimes for the EEZ and the high seas are undesirable" (emphasis added).

The FAO has buttressed its arguments for joint venture by pointing to comparative advantage, where the developed countries have the advantage of abundance of capital and know-how to specialise in large-scale industrial fisheries and the developing countries with large-scale unemployment and other problems to specialise in labour intensive small-scale fisheries.

The developed world's hunt for natural resources and the prime need for food has taken it again to the shores of the third world. With stagnating supplies from marine fisheries and the global demand for fish increasing, the developed world's quest is naturally for the inner resources of inland fisheries of the developing countries. Two of the international fisheries organisations floated by the FAO, the Committee for Inland

Fisheries of Africa and the Committee for Inland Fisheries of Latin America, are exclusively to promote the development of mland fisheries of the region.

There has been a more than four-fold increase in the total aid for aquaculture between 1978 and 1983. The World Bank, the Asian Development Bank and the bilateral donors contributed the bulk of the aid given for aquaculture development in third world countries. The world body's (FAO's) support for aquaculture in third world countries is not guided by the growth in demand alone. It has been guided by a variety of factors like the deteriorating environmental condition (water quality) in the developed world, stringent environmental protection measures in these countries, the need to recover the investments already made in R and D for aquaculture by aquaculture enterprises in developed countries and the realisation of the potential gains from exploiting the inland fishery resources of the third world countries. The potential for maximising the net economic yield from these countries is recognised by the FAO. This is in tune with the FAO's concept of global rationality of maximising the net returns (marginal product) from each activity.

Another component of FAO's strategy for manoeuvring the management of third world fisheries is its appeal for liberalisation of trade in the developing countries, which have for practical reasons introduced certain controls for protecting their domestic infant industries in the past. The FAO, like other international trade organisations, now demands removal of all controls on trade and industry. It wants the free flow of goods and services and inputs in the international economy. Fisheries management in the third world are particularly advised to remove all controls on import of components to the industry and to open the industry for foreign participation in aquaculture, deep sea fishing, etc, through joint venture, chartering or other means. State support to the industry in the form of subsidy on investment, working capital (oil consumption), etc, are all advised to be scrapped and the industry asked to grow on the basis of free competition on a global scale in the international market. This strategy, once accepted, is presumed to help the developed world in deploying its surplus capital to the exploitation of the third world natural resources (fish stocks). It favours free trade in fishery products based on global supply and demand conditions directing the flow of fishery products to the advanced countries, where there is an excess of demand and the local supplies are not responding to price stimuli. The evolving global theory of fisheries management suggests that fisheries development in the world should be guided by international market prices and not by arbitrary restrictions imposed by 'national' governments.

The FAO Special Chapter (revised) of the State of Food and Agriculture 1992 noted "for the large-scale industrial fisheries where the proportion of global waste is so large. several policy changes may facilitate the process (of change). The first is to remove the existing subsidies which exacerbate the waste and increase the impediments to change. The second parallel step would be to create use rights and allow the fishing effort to adapt to sustainable levels. The third step would be to allow the real prices of fish to increase thereby improving the earnings of the fishermen so that they would have greater flexibility in adapting to the necessary management measures Finally, national governments can begin to extract some of the rents and use them not only to help cover the costs of management but also to establish funds for the purpose of buying superfluous capital and labour and eventually achieving rationalised fisheries"

The establishment of free trade in the fisheries sector in this manner would ensure the flow of foreign capital, know-how and enterprise to the third world countries to tap the aquaculture potential and living resources of the EEZ of these countries and in maximising the net economic returns and in procuring food cheaper from the third world countries. More importantly, it will aid in sustaining the development achieved by the advanced world and in keeping the third world in the trajectory of 'sustainable development' and 'new economic order'. The net effect of this 'trade off' will be less food, more unemployment and more natural resource depletion for the third world countries. The effects of this 'unequal exchange' are already felt in developing countries like India, where domestic fish prices are rising and ecological imbalances are looming large.

# INDIAN COUNCIL OF SOCIAL SCIENCE RESEARCH

## Research Fellowships

Applications are invited for the award of Doctoral Fellowships (J.R.F.) in Social Sciences for the year 95-96 from Scholars belonging to **North Eastern Region exclusively.** 

### **ELIGIBILITY**

- 1 Postgraduation in social sciences with at least 55 per cent marks.
- 2 Candidate must have cleared National Eligibility Test (NET) conducted by UGC/CSIR.
- 3 Applicant must be registered for Ph.D. or should be able to complete the registration formalities within six months of joining the fellowship.

#### **AGE**

The upper age limit of Junior Research Fellow is 35 years as on 1.9.1996 (Relaxable by 5 years for SC/ST and women candidates). In exceptional cases where a candidate is found to have outstanding ability, the age limit may be relaxed marginally at the discretion of ICSSR.

### LAST DATE

The last date for receipt of completed application forms is 30th Sept.'96.

### **VALUE AND DURATION OF FELLOWSHIP**

- A Selected candidates will be paid a fellowship amount of Rs. 2,500/- per month for the first two years and subsequently Rs. 2,800/- per month plus Rs. 5000/- per year as Contingency Grant. Fellowship will be available for a maximum period of 4 years.
- B Under the **Salary Protected Scheme**, employed scholar will get his/her salary for two year plus one time Contingency Grant @ of Rs. 5000/- P.A. The duration of this fellowship is **two years**.

### **SELECTION**

Selection will be based on the candidate's past academic record and performance in the interviews conducted by the ICSSR.

The interested candidates may send their bio-data (indicating whether cleared UGC/NET Exam.) along with a detailed Research proposal and the copies of the certificates to the Assistant Director (Doctoral Fellowships), Indian Council of Social Science Research, Aruna Asaf Ali Marg, Post Box No. 10528, New Delhi-110067

Bluebird

# Yeltsin: Inauguration in the Shadow of Death

Dev Murarka

Yeltsin's inauguration as president on August 9 marks the real autumn of the patriarch, the end of the Yeltsin era. It also marks the beginning of a new presidential race. Not surprisingly, intense infighting has already begun in the Kremlin.

THERE was something macabre and pathetic about the occasion. People were dying in tens and hundreds in Chechnya under the hail of merciless Russian bombs released on his orders, and here was Boris Yeltsin, the re-elected Tsar of Russia, droning on about his constitutional duties. It was like Nero fiddling while Rome burned, except that it was not Moscow burning but distant Grozny, the Chechnya capital. The man with the fading health, who had broken virtually all his election promises, whose demise is being discussed in whispers behind his back by all his underlings and competitors, was undertaking yet more. His pledge to "respect and preserve the rights and freedom of the individual and the citizen" according to article 82 of the constitution, sounded not merely ironical but positively insulting in view of what was going on in Chechnya at that very minute.

The inauguration ceremony which took place at mid-day on August 9 lasted barely 20 minutes and was in rather poor taste. Apparently designed to be impressive it turned out to be neither well thought out nor very elegant. For one thing, the national flag on top of the dais was hung the wrong way round. Then, right at the start, a special edition of the constitution, and the symbol of the president, a golden necklace with the Order for Services to the Fatherland, was brought in a box to the dais by a platoon of Ceremonial Guards. But it had to be taken from them and put on the lecterns by the chairman of the Constitutional Court, Vladimir Tumanov, as if he was some sort of a clerk, not a high level dignitary.

Next came the turn of the chairman of the Election Commission, Nikolai Ryabov, who made a few remarks before handing over to Yeltsin the certificate confirming his election win. Exaggerating grossly, he claimed that the president had been elected by 94 mn voters. Actually the total number of persons who voted in the second round of the election was 74.8 mn, and only 40.2 mn of them voted for Yeltsin. But this kind of casual boasting and distortion in his favour is routine in Yeltsinite political circles.

Following him, Tumanov called upon Yeltsin to take the oath. His speech and manners somewhat lacked dignity. In a crude fashion, he pointed with his outstretched hand in the direction of the lectern where he had placed the special edition of the

constitution and asked Yeltsin to take the oath on it.

Since July 3, the president had not appeared in public and the invited audience was interested only in observing how poorly or well he looked and performed. At the beginning of the proceedings he had appeared on the scene a little late, causing apprehension that he might not be able to go through even the briefest of ceremonies. But he did walk in, very slowly. Then came the ghoulish moment which everyone was waiting for, the oath-taking, when he had to speak. He pronounced the 33-word oath, resting his hand on the Russian constitution, with "great difficulty" (Segodnya, August 10), his voice quavering, and some of the words slurred. Even this much he did with the help of a teleprompter hidden in the flowers. He was obviously, if not in pain, at least feeling great discomfort throughout.

Those in charge of the proceedings behind the scenes at the Palace of the Congresses, where the ceremony took place, followed his progress with fingers crossed and praying, "Please, don't fall down". They heaved a sigh of relief when it was all over. All this failed to remove doubts about the actual state of his health, which were aroused when soon after the election he went for a rest outside Moscow and later it was announced, as anticipated, that soon after the inauguration he would go for a two month 'vacation'. ('Yeltsin's Last Hurrah', EPW, June 8, p 1388).

Following the oath-taking, the presidential necklace was placed on his shoulders by the chairman of the Council of Federation, Yegor Stroey. The last act in the ceremony was a speech by the Patriarch of the Russian Orthodox Church, Alexei II, comparatively the longest of the show though it lasted only 5-6 minutes. Two points should be made in this connection. First, there is no provision in the constitution for such a religious blessing on state occasions and in spirit the procedure violated the multi-confessional nature of the secular state. Two, the speech by the Patriarch almost appropriated the president for the church, thus continuing the tradition of keeping the Orthodox Church politically subservient to the state. This confirmed once again the growing servility of the contemporary Orthodox Church, if not to the state then at least to Yeltsin, which has been observed in recent years.

Scepticism among the people about the state of his health is such that many believe that some of the appearances on public occasions have been made by his doubles. Therefore, everyone watches out for his damaged left hand, where two fingers are missing, to make sure it is not a double. This time around, too, many people were suspicious, particularly because there was a remarkable contrast in his appearance and manner when some 40 minutes after the ceremony he appeared fresh, vigorous and clear in speech at the reception. It was as if a magic wand had been moved over him in the interval. More likely, he was administered energising preparations in the interval. No one believes in official reassurances about his health.

The initial plans for the ceremony were something out of 'A Thousand and One Nights'. There was to be an ode in honour of Yeltsin and much other fanfare besides. According to Grigory Yavlinsky, a political leader of the younger generation, who based himself on disclosures in a British newspaper, 6,000 very expensive silver place settings were brought by the president's administration for a banquet. However, according to some of those attending the banquet, these place settings were not used. Have they already disappeared in the homes of various officials?

Had his health been better, the ceremony would have been on a grander, magnificent scale, and was planned to be held outdoors, at the Cathedral Square inside the Kremlin walls where traditionally the coronation of Russian Tsars took place. The reduced scale of the ceremony was attributed to cold weather by the Kremlin propagandists. The weather turned out to be tine. On behalf of Yeltsin it was claimed that the ceremony was scaled down because he did not want a huge sum spent on an outdoor show. No one in Russia believed the excuse even momentarily. There was an air of foreboding and uncase hanging over the whole show.

Moreover, the switch in the venue was so sudden that many seats in the hall were either left empty or filled by soldiers, many of whom did not even know why they were sent there, what the function was about. Health was also the factor why Yeltsin did not invite his eternal beloved like "friend Bill [Clinton]", "friend Helmut [Kohl]", "friend Jacques [Chirac]" and other odds and ends of the western world, who would have come running at a whistle from him.

The shadow of death over the ceremony was palpable. In the first instance it was because of the extremely well planned and well timed Chechen attack on Grozny which totally exposed the wretchedness of the Russian army performance, its lying, boasting and corrupt generals, the hungry, demoralised soldiers and the inevitable bloodbath there. Symptomatic, that within 12 hours of the ceremony, before even the sound

of music and gun salutes had quite died down an official day of national mourning over Grozny started.

Secondly, the shadow of death hung over Yeltsin himself, from which there was no getting away, even if a large part of the Russian media has tried hard to look the other way. In contrast, the western media is full of speculation about an impending operation on Yeltsin.

Politics is a merciless business. Regardless of his poor health, the entourage of Yeltsin and beneficiaries of his patronage dragged him to one city after another during the election campaign, like a gypsy drags his performing bear even if it is sick because his livelihood depends upon it. With his indiscriminate and quenchless thirst for power, blind to the consequences for his health and callously indifferent to the future of the country, Yeltsin was only too willing. He is paying the price. Now, in order to exculpate themselves, his incurable lickspittles like Georgi Satarov, an advisor, are claiming that though tired Yeltsin has never been in a better 'intellectual' shape than at present. Since when has Yeltsin anything in common with intellect, people wonder.

The vacation has been postponed a little because of the in-fighting which has broken out among his new or renewed appointees, primarily on the Chechnya issue. On the one side is general Aleksandr Lebed, secretary of the Security Council, presidential assistant on National Security and lastly presidential representative in Chechnya. On the other side are first deputy prime minister Oleg Lobov and prime minister Viktor Chernomyrdin and possibly even Anatoly Chubias, head of the presidential administration.

As far as Lobov is concerned, Lebed has inherited two of the posts which he had held before, the Security Council and Chechnya. Lobov was moved sideways and remained at the level of a first deputy prime minister only after being removed from the Security Council. Moreover, Lebed has openly criticised Lobov for his non-performance in Chechnya.

Similarly, Chernomyrdin also resents the rise of Lebed and perceives him as a threat to his future political career aimed at the presidential chair. The case of Chubias is more ideological since Lebed differs from him on economic policies. Both of them are also against granting him greater powers. Nevertheless, Yeltsin has extended him almost complete authority for dealing with Chechnya and Lebed is making dramatic use of it. It is not only a political plus for Lebed over his rivals. If he can really bring peace to the tortured Chechnya, he will forge ahead in public eyes as a worthy candidate for the next presidency, no matter how hard Chernomyrdin and company try to break his neck in the months ahead.

The delay in Yeltsin's departure from Moscow cannot resolve this tangle completely and it is doubtful if the canny president would want to do so. But he has to establish some kind of equilibrium so that the boat will not be rocked in his absence, which may be a long one, and the power structure is so constructed that no one is in single command.

In reality, all that his victory has achieved is that it has extended the period of political uncertainty and instability in the country and ensured that another divisive and expensive round of presidential election will take place soon. His terrible legacy will be a painful one for the nation. Had he really cared about the welfare of the country and the people, he would have gracefully retired from the political arena. But he worked on the principle: till death do us part.

Thus, the inauguration marks the real autumn of the patriarch, the end of the Yeltsin era. It is also the beginning of a new presidential race, because everyone understands that it could come about any moment. This is the reason why such intensive infighting has already begun in the Kremlin. Only the inexperienced Lebed, who wears ambition as well as innocence on his sleeve, has been indiscreet enough to let the cat out of the bag when asked if he was going to be the president in 2000 and answered "Probably even earlier". He was being frank, too frank and honest for his own good.

### EXIM BANK INTERNATIONAL TRADE RESEARCH AWARD 1996

In International trade and related financing

#### THE AWARD

The objective is to promote research in International Trade and related financing by Indian nationals, at universities and academic institutions in India and abroad. The Award will consist of a sum of Indian Rupees Fifty Thousand and a citation.

#### WINNERS

1989 Dr. Nagesh Kumar - Thesis: Foreign Controlled Enterprises in Indian Industry. 1990: Dr. Sebastian Morris - Thesis: Foreign Direct Investments from India: 1964-83 Mr. Prabhirjit Sarkar - Thesis: The Post War Thirms of Trade Controversy. A Re-Examination. 1991 Dr. (Ms.) Neelam Singh - Thesis: Foreign Ownership, Size and Performance of a Firm: A Case Study of Indian Pharmaceutical Industry. 1992: Dr. Subhayu Bandopadhyay - Thesis. Export Taxation in a Multicountry. General Equilibrium Framework. 1993. Dr. Mathew Joseph - Thesis: Exchange Rate Regime of Less Developed Countries

Prasad - Thesis: External Debt of Developing Countries: A case study of India Dr. (Mrs.) Ashwini Deshpande. Thesis: Some aspects of International Debt of Developing Countries. 1995: Dr. Aditya Bhattacharjea - Thesis: Essays in Industrial Organisation and Strategic Trade Policy for Developing Countries.

#### THE ENTRY

Fax: 2180743.

Research work in International Trade and related financing leading to a doctorate from a university or an equivalent academic institution in India or abroad is a prerequisite for eligibility of the Annual Award. Exim Bank will accept as entries, theses by which doctorates have been obtained during January 1, 1992 to October 22, 1996. Last date for receiving entries is October 22, 1996.

Entry Forms available from: Planning Group Export-Import Bank of India Post Bag 16100, Mumbai 400 005. India.

# Chechnya: A Triumph for Russian Orthodox 'Civilisation'

#### A Correspondent

While claiming to be answerable for everything, Yeltsin maintained a deafening silence on the disgraceful ultimatum issued by the commander of Russian forces in Chechnya demanding that the entire population of Grozny abandon the capital city within 48 hours or else face being wiped out by bombing. Alexandr Lebed, who had the good sense to cancel the order, tried to make light of the episode by describing it as "an unsuccessful joke".

I answer for everything

- Roris Veltsin speech at Po

 Boris Yeltsın, speech at Perm on May 31, 1996.

WHERE else in the 'civilised' world - 'civilised' in the current, racist Russian connotation of the term, constantly used by a 'cowardly and criminally silent' intelligentsia, media and politicians, by which they mean the white peoples of Australia, New Zealand, America, Canada and Europe in which they include the Russian Slavs, and exclude all others as beneath contempt - can one find a supposedly ruling president who, unperturbed, spends three days searching for a suitable place for rest, while on those very days his killer generals slaughter one of the minorities of the country?

While claiming to be answerable for everything, Yeltsin maintained a deafening silence on the disgraceful ultimatum by Lieutenant General Konstanin Pulikovsky, the commander ad interim of Russian forces in Chechnya, issued on Monday, August 19, evening, demanding that the entire population of Grozny, the capital of Chechnya, abandon the city within 48 hours or else face being wiped out by bombing. Thank heavens that General Alexandr Lebed had the wit to cancel the order later but not before Pulikovsky had already started bombing the civilisans before the ultimatum expired, afraid that he might not have the satisfaction of seeing thousands of Chechen 'animals' (the term used to characterise Chechens in official pamphlets issued by the Russian ministry of internal affairs) die. However, Pulikovsky had the pleasure of making at least half the population of the city homeless and sending it adrift as refugees and beggars. This great luminary of Slav humanism, of course, confidently relied on the "support of all true Russians and the Orthodox Church". What other convincing demonstration of the achievement of Russian civilisation and the Russian Orthodox Church, higher in quality than all others, is required? No wonder Yeltsin, who likes to attend church functions, holding a candle in his hand when physically able, could not find a single word of reprobation.

For all that, late on the evening of August 22 he did find voice and made a carefully-staged television appearance. Not to condemn Pulikovsky but to heap unjustified criticism on General Alexandr Lebed, his political partner and secretary of the Security Council. Lebed's crime was that on the evening of August 21 he had flown to Chechnya and agreed on truce. On August 23 Yeltsin refused to meet Lebed before his return to Chechnya for further negotiations and curtly ordered him to make a written submission. But capricious as usual, late in the evening, he rang him to approve of his mission, though conditionally, thus leaving the possibility open of rejecting a solution. Perhaps it got through to his betogged brain that his ill-treatment of Lebed was becoming counter-productive and public opinion was rallying behind the swan. Yeltsin does not really want a truce or peace. His conception of peace is extinction of the

The world is greatly at fault too in not noticing how marvellous Yeltsin's killer generals are, sensitive and wise. According to Yeltsin, in the past, he had the best defence minister ever, Pavel Grachev, Unfortunately, due to a little difficulty about re-election he had to part with him. However, like Grachev, his generals purposely do not defeat the Chechen freedom fighters - though they can easily do so in 20-25 minutes, and keep on confronting them, because they want to show the world how variously skilled is the Russian army, how highly competent they are. Time is required to show their awesome abilities fully. The chechens, the born stupid animals that they are, do not understand this. It would be in their interest to surrender fully and thus spare the world the demonstration of the invincible Russian might, which might frighten all of us.

It should not be overlooked also that apart from their great military prowess, Yeltsin's generals are unbeatable geniuses at public relations. They boast, he and threaten as no one else can. They boast in the morning, at noon, in the evening and at night every day. They lie from morning till evening and from evening till morning, and resume lying again the next morning. They have proudly maintained this cycle without break to this day, after 19 months of practice in Chechnya. And they threaten every hour. When one sees their arrogant postures, their eyes dripping poison, their faces distorted with hate, their threatening mien on the television screen in news programmes, particularly Pulikovsky, General Vyacheslav Tikhomirov the commander in charge Chechnya, and General Anatoly Kulikov, the internal affairs minister, supposed to be overall in charge of operations there, one has to make an effort to restrain from vomiting.

One cannot, of course, understand the noble Russian conduct in Chechnya without appreciating their highly subtle sense of homour, incomprehensible to unintelligent people. Take the ultimatum to the citizens of Grozny by the psychopath Pulikovsky. An ordinary person may not see anything funny in it. However, it was left to Lebed, the 'Great White Swan', to point it out. According to him it was only "an unsuccessful joke"! Of course, unsuccessful because roughly only half of the quarter million people of Grozny were able to escape before the ultimatum was cancelled by him. The joke would have been fully successful if all the people had fled the city. A few more such jokes and Chechnya would become empty of trouble-makers. And that is what the Russians really want, is it not? A pity that the kill-joy Lebed has decreed there should be no more such jokes. Otherwise, the Russian objectives in Chechnya would be fully achieved and he could have proudly declared to Yeltsin, see, no more Chechens. How shortsighted can one get? Perhaps he can be forgiven. He too is a general after

Even so, it would be mean and grossly unfair to Yeltsin, the greatest democrat under the sun according to his bank-rollers and god-fathers, president Bill Clinton and chancellor Helmut Kohl, to deny his stupendous accomplishment in finishing off over 50,000 Chechens or more. Not a coincidence that precisely this triumph has been appreciated and celebrated by the World Bank to release yet more credit to Moscow. Clinton and Kohl should learn from his superbexample how to deal with the Negroes and Turks in their respective countries.

Long live the Great Russian Slavic Civilisation and its exclusive achievements!

A Feminist and Ecological Reader of Biotechnology Vandana Shiva and Ingunn Moser (Editors)

Biotechnology is the most powerful bundle of new technologies currently under development. It is also the most intrusive and determinative technology relating to nature generally and the human body in particular.

This Reader compiles some of the most important work from feminists and environmentalists critical of the headlong rush into what is likely to prove a technological minefield.

The Political Economy of Agrarian Reform

F. Tomasson Jannuzi

This study shows the failure of successive Indian governments to effect meaningful agrarian reforms, this has led to a political economy in rural India that is shaped, as it was prior to Independence, largely by the interests of an elite minority of landholders.

# Nature-Friendly Planning of Humanity's Future

### Dialectics and Dynamics of Development Management

V R Krishna Iyer

Planned development is a process with clear goals and means. It is necessary therefore to define our ends first. If the people as a whole are our constituency surely no planning will be purposeful unless it be people-oriented. Primacy must be given to environment-propitious methodologies, not to technology in the abstract. What good are Cadillacs and Jaguars and Mercedez when roads are unkempt, narrow and unmade?

SOMETIME back I participated in an international seminar on environmental planning and management. I have been feeling very unhappy about the grave dangers of callous technology intoxicated with epicurean appetites tempting men and women into inevitable doom. My thoughts are pertinent only to the extent that I, a sombre and sensitive inhabitant of the Earth, am in anguish as I behold the lethal prospect of hi-tech corporate power, inflicting on unforgiving Nature, mortal wounds, leading to the Fifth Act of the Shakespearean tragedy of humanity. Karl Marx once made a poignant remark: "Human projects that ignore the great laws of nature bring only disaster".

How I wish Marxists remembered the pregnant meaning of this observation when in some Indian states, they disdain green movements and environmentalist campaigns, drugged by an ignorant craving for industrialism, oblivious of the new dialectic. in our hi-tech world, of the switchover from 'industrialise or perish' to 'industrialise and perish' since, in the myopic perception and insatiable hunger for maximum profit, the MNCs mayhem Nature in their gold rush. To be addicted to the religion of money. rejecting the long-term needs of humanity and its well-being in the biosphere is to gamble with the delicate balance between life and the rest of Creation. The biosphere is a supreme value and so too is the 'noosphere' which is an expression meaning developmental operation guided by sense and sensibility. Biosphere, so obvious a concept for you, embraces the Earth's surface and atmosphere in which living organisms are found and with which interaction occurs to form the global ecosystem. It is what may be termed biogeochemistry and allied matters. The sphere of life which is the biosphere includes all parts of our planet where life has 'asserted' itself — the atmosphere, the ocean and all land surface where life forms exist. Life is the link between the cosmos and the earth and transforms dead matter, using energy, so as to create the material world. Living organisms in the process of evolution continually change. It is in the rapid march of such changes that *Homo sapiens* emerged amidst forests and beasts. The extraordinary phenomenon of humans with brains became a marvellous landmark in the story of creation. The ability to use reason was part of this development of anthropogenesis.

The biosphere has now another factor of change which has been called 'noosphere'. the sphere of reason. The mankind thus entered the epoch of noosphere whereby further evolution was directed by reason. The collective use of reason thus took over the direction of development. Such wisdom, as a social mariner's compass, was meant to produce harmony between nature and man. If nature is wounded or environment and ecology injured, there would be reprisals where the losing end would be human civilisation. While the biosphere can do without man, man cannot exist if angry biosphere bites him. The task of technological engineering with a vision of global wellbeing belongs to the 'noosphere', taking cognisance of the balance in the biosphere. If technologists avariciously overstep the 'permissible threshold' humanity will have to pay a price too high to be worthwhile. Here comes the creative intelligence of systemic engineers, scientists and technologists for playing a constructive role as artists of change, delicately preserving the limits of sustainable development. The humanist perspective of modern science must remember these guidelines if indignant nature, like a wounded bear at bay, is not to inflict irreparable, irreversible damage to global society.

As we move towards market-friendly marijuana, materialist arrogance and global aggressiveness in production and profit, we reach a contradiction between profit-grabbing indusrialisation 'red in tooth and claw' and a pollution-free society where human happiness in good health and joy of nature is the ultimate promise. In short, here we have to draw the guidelines where the poison of industrialism stops and progressive, sustainable development starts. The parameters of human progress summon the statesmanship of scientists to achieve the goal of benign advance.

Several years ago a study of world conservation strategy revealed:

Forty per cent of humid tropical forests, which constitute the richest resources of the planet's natural environment, have already been destroyed. What remains is being uprooted and razed at a rate of 20 per cent per minute;

Nineteen per cent of the land surface of the planet (or an area of 30 million square kilometres) is in danger of becoming a desert. The degradation of dry landscapes is taking place at a rate of 44 hectares per minute; Humid coastal zones and shallow areas of the seas and oceases, where two-thirds of all the world's fish reproduce, are being degraded or destroyed at the same rate as a result of the extraction of sand and shingle, as well as the burying of waste and the dumping of polluting matter;

More than a thousand species of vertebrates and over 25,000 of plants are on the verge of extinction.

(Grigori Khozen in Big Business Against Nature, Novosti Press Agency, Moscow, 1984, p 13).

Things have become far worse as the Rio de Janeiro deliberations have revealed because the sunset of social justice and sunrise of private plunder have devalued the life of the many, for the pleasures of the few. If the jurisprudence of human justice, together with the natural and social sciences, command balanced development and distributive fairness, future shock can well be averted and prospect of plenty enhanced.

Materialist incentive, labelled capitalist or socialist, is sure to exceed the norms of social justice, unless the imperatives of global survival are accepted by the sensitised engineers of science and technology and managers of planned progress.

Long ago, the pitiless march of profitmaking big business was described by an English trade unionist whom Karl Marx quoted in his Capital:

With adequate profit, capital is very hold.

A certain 10 per cent will ensure its

employment anywhere; 20 per cent certain will produce eagerness; 50 per cent, positive audacity. 100 per cent will make it ready to trample on all human laws; 300 per cent, and there is not a crime at which it will scruple, nor a risk it will not run, even to the chance of its owner being hanged. If turbulence and strife will being a profit, it will freely encourage both.

Humanitarian and ethical criteria must create new restraints on the revelry of reckless invasion of nature. Let me quote in support a scientist of note in the former Soviet Union, Nikita Moisseyev:

Our colleagues in the humanities can also play a big role. The fact is that natural scientists can indicate the limitations imposed by nature on human activity, but any restrictions or bans relating to human activity can only be put into practice by people. Here is where economists, sociologists and other scholars should take over and show how the spontaneous solution of contradictions must give way to institutions of accord. They should explain to people that the world today is quite different from what it was at the beginning and even in the middle of the 20th century. This means in effect that mankind faces the onset of an epoch that needs new ethics and new morals (Man, Nature and the Future of Civilisation, p 93, Novosti Press Agency Publishing House).

It is true that the third world, vulnerable to the dictates of the first world, follows, simian fashion, the goal of unlimited economic growth wedded to an obsession with the gross national product, high technology and material achievement prodded by the MNCs which are predators of global resources. Any Gandhian critique of this immoral arrogance of giantism in growth will pronounce the present process as dangerous in the long run.

Environment-friendly advance is best promoted by the Gandhian concept of 'Small Is Beautiful', as explained by Schumacher that great advocate of appropriate technology. What is big often is aggressive and ignores human values. In the words of E M Forster:

It is the voice of vulgar mind to be thrilled by bigness, to think that a thousand square miles are a thousand times more wonderful than one square mile, and that a million square miles are almost the same as heaven.

Development, when operated by huge corporate engines, misses the very purpose of human happiness and in its insatiable hunger of mass production crushes the masses and ignores the central questions. Development for what purpose? Development towards what end? Development on what terms of harmony with nature? Indeed, western corporate materialist gluttony means callous mechanisation and hi-tech chemicalisation, whether of industry or agriculture, pharmeceuticals or macro-projects for power, irrigation or other.

It means modern armies equipped with the most devastating technological weapons

available. It means the endless pursuit of growth, without question as to the goals or even the shape of that growth or whether the sum of human welfare is being advanced (*Third World Tomorrow* by Paul Harrison, p 342).

One of the essential consequences of greed gone mad, implicit in this MNC model, is the pumping in of corruption as a means for gaining darkling ends. In the case of soft states like India, power brokers, actual and potential, are won over by the purchasing power of tycoons. Massive corruption without mass indignation and each one in the assembly line of government having a price, is a systemic pathology of neoglobalisation. The structural sapping of national integrity by IMF conditionalities is an inevitable fall out of the modern scenario when the danse macabre of Multinational Corruption Incorporated (MNCI) becomes the major player in the economic South. Therefore, the moral environment, which forbids aggression on Nature, is emasculated by MNCI. All the countries where corporate power has exercised control over government through money power have destroyed resources of nature like forests, rivers, clean air and pollution-free biosphere.

The sweeping strategy of the global economic roll back unleashed by MNCs, with hegemony worldwide, has resulted in "the most unkindest cut of all", the infliction of wounds on the vital spots of nature contrary to what the vedic wisdom of ancient India taught humanity.

Those who are concerned with environmental planning and management must remember:

We have taught ourselves to create and combine the most powerful of technologies. We have not taken pains to learn about their consequences. Today these consequences threaten to destroy us. We must learn, and learn tast (Alvin Toffler, Future Shock, p 440).

Among the lessons of Earth Summit Conference the world must learn are the following:

- (1) The North, comprising 20 per cent of the world's population and consuming 80 per cent of its reserves (the US consumes the lion's share), is reluctant to take any initiatitive to save humanity from environmental degradation and the adversities of underdevelopment. Have the 'haves' ever in history shared with the 'have-nots' a holistic strategy to make all humanity a global brotherhood in development, environment and ecology save under the soul force of cosmic collective conscience which is the locomotive of history?
- (2) Victory comes once the South stands together and awareness dawns on the North that the Earth is environmentally indivisible.
- (3) The prognosis is bright if the nations, weak and strong, present a united front against eco-imperialism.

(4) Finally, as the Brazilian president underscored on the eve of the Rio Summit: "You can't have an environmentally healthy planet in a world that is socially unjust"

Markey State 🛊 🛊 🗗 State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of the State of

(5) Have the nations any recipe for success? Such a viable proposal is what Mahathir Mohammed made:

A global fund, financed by national contributions assessed on the basis of population and carbon dioxide emissions, would be created to assure the success of this vast effort at reforestation and new forestation. Such a project would not only solve, at least partially, one of the world's most important environmental problems, it would also exemplify an approach to saving the earth through co-operative efforts that are fair and just for all, not merely for the North.

Environment, ecology, population, poverty and life in luxury, all have an impact on the escalating Global disorder. Compassion towards ecology and environment is a casualty if we jettison the imperatives of environmental preservation prompted by myopic avarice.

With the ideal of power over Nature, demanded passion seeks to programme the technological golden goose for speedier and speedier outputs of whatever we desire. Perfection has limits. Power has none. Need has limits Greed has none. The limits of this biosphere are set by the laws of Nature. In the laws of Nature, we should hail our saviours. Our only chance of resurrection lies in total alignment with them [Animal Welfare and Nature: HINDU Scriptural Perspectives by G Naganathan, p 22]

Our current culture is dominated by knowhow without caring for know-why. Seduced by the North:

We are always seeking a better, more efficient, more powerful, more instantaneous route to carelessly examined ends. Now the most dangerous brand of determinism is the technological. Science began as a human tool; now humans are its victims, and science is dragging us down a path no longer of our own choosing [Ibid, p 22]

Mesmerised by such vulgarity the masses of the south miss the essence of what Gandhiji in India and Masanobu Furooka in Japan taught us. There is a moral obligation on the part of the intellectuals to abandon the greed (of the few) and fulfil the needs (of the masses) as the 'dharma' our our times. Our culture of ancient vintage bears testimony to the wisdom of living in reverence for all of Nature's creations and behold it as a way of life, a necessity of survival and a spiritual value.

These introductory observations of mine, if valid, can be fleshed out beautifully by environmental planners and managers. The philosophy of the Vedas and Upanishads, the sermons of Jesus and the universal brotherhood of Muhammad when lifted to the 21st century, will be a moral monitor

and spiritual teacher to the developmental technologists and advisers of planning.

Planned development is a process with clear goals and means which will advance, not defeat the objectives. So we must define our ends first. If the people, as a whole, are our constituency surely no planning will be purposeful unless it be people-oriented. If the environment is hostile, plans will be frustrated. So primacy must be given to environment-propitious methodology, not technology in the abstract or under totally different conditions or popular milieus. This is too obvious to be emphasised. What would be the point of having Cadillacs and Mercedez and Jaguars where roads are narrow? Fast foods and bar parlours, where people are poor and wages low, are incompatible with distributive justice or socialistic pattern of society. Likewise, management is conditioned by relevant factors of human habits and residential facilities. All said and done, science is at the service of a given society, not the other way about. The democratic commitment and culture are determinants which science and technology must consider. They are instruments to solve problems of a country, not to impose themselves on a community. giving rise to new problems. So it is that exotic arts are not answers where ground realities and people's ethods are incongruous. Progress, to be authentic, must achieve an internal integrity and social morality. These are imperatives of environmental planning and management.

What I have stated above applies to the north as much as to the South. This caveat of ecological consequences of the private entrepreneurship was uttered by president Theodore Roosevelt. In a special message he warned his countrymen:

The natural resources of our country are in danger of exhaustion if we permit the old wasteful methods of exploiting them longer to continue... The time has come to inquire seriously what will happen when our forests are gone, when the coal, the iron, the oil, and the gas are exhausted, when the soils shall have been still further impoverished and washed into the streams, polluting the rivers, denuding the fields, and obstructing navigation... It is time for us now as a nation to exercise the same reasonable foresight in dealing with our great natural resources that would be shown by any prudent man in conserving and wisely using the property which contains the assurance of well-being for himself and his children (quoted in Big Business Against Nature by Grigori Khozen, pp 17-18).

Look at the contradictions of progress in the US which must dialectically educate us. Stewart Udall, ex-secretary of the interior, described the situation in 1960 thus:

This nation leads the world in wealth and power, but also leads in the degradation of the human habitat. We have the most automobiles and the worst junkyards. We are the most mobile people on earth and we endure the worst congestion. We produce the most energy and have the foulest air. Out factories pour out more products and our rivers carry the heaviest loads of pollution (Ibid, p 18).

Nixon, as president, pledged that "environmental quality would be the third great goal of the New American Revolution".

Ronald Reagan, while he was governor of California, told his electorate:

There is no subject more on our minds than the preservation of our environment and the absolute necessity of waging an all-out war against the debauching of that environment (lbid, p 19).

Market friendliness is a euphemism for open sesame to big business whose focus is on quick bucks, even if it makes public good bankrupt.

In the early 1970s the influential weekly US News and World Report revealed that as a result of a continuous deterioration in the quality of the working environment and of increased pollution at US factories, at least 1,00,000 people were dying every year and another 3,90,000 were being seriously disabled. In the Federal Republic of Germany, the number of people suffering from hearing defects due to factory noise in the 1960s rose 13.5 times compared with the previous decade; and the number of industrial workers suffering from skin diseases has been growing fast. In Sweden, an examination of workers employed in copper smelting works showed an increasing number of deaths due to cancer of lungs, blood disease, cirrhosis of the liver and cardio-vascular disease. Medical men are alarmed at the continuous growth of hereditary diseases and even deformities among working-class children.

There is no evidence that the corporations have radically changed their attitude to environment protection. Between 1974 and 1980 the US Environmental Protection Agency (EPA) investigated 340 cases of violation by major corporations of the laws concerning air and water pollution. The lines for these violations exceed 55 million dollars The biggest fine - 18 9 million dollars - was imposed on the United States Steel Company. One American voluntary group calling for more rigid control over the use of nuclear energy has calculated that in 1979 alone there were 2,300 breakdowns and accidents at atomic power and nuclear fuel plants in the US Many of them caused considerable ecological damage (Big Business Against Nature by Grigori Khozin. pp 19-20)

We thus find the world's corporate controllerate dominating the processes of production in our planet, degrading environment and damaging ecology. We thus discover that globalism in the hands of corporate terrorism makes nature a graveyard and a junkyard. With all the promises the MNCs may make, there is no code of ethics

for them, no legal hand cuffs and measures of punishment in case of violation. Ralph Nader, long ago wrote about ineffective application of laws when the culprit is a corporate. He tartly observes.

Rarely is the law invoked against corporate violence, but when it is, the prosecutional penalty or equitable remedy is applied to the corporate shell and not to those officials who make corporate policy. It is almost axiomatic that irresponsibility toward public interests becomes institutionalised whenever the making of decisions is so estranged from any accountability for their discernible consequences...

Unsafely designed automobiles, pollution, harmful food additives, and other contaminants embody a silent kind of violence with indeterminate, unpredictable incidence per victim. That impact does not provoke immediate sensory response of pain or anguish directed at the source of the harm Such harm does not come in the anthropomorphic form that is apparently so necessary to motivate action. Corporateinduced violence illustrates in compelling fashion the biological obsolescence of human beings toward machine, chemical, or other injurious exposures emanating from the technology of corporate groups. Our sensory apparatus, adapted to cruder and older forms of visible hazards, cannot detect carbon monoxide or radiation until it is too late Soon, this widening gap between the obsolete mechanisms of man's physiology and the multiple, cumulative impacts of his technology may mark the confines of the struggle for planetary survival even should peace between nations prevail. The mind of man must abstract what is happening more rapidly, for the body of man provides few early alert signals. Corporate fraud and other economic crimes similarly escape the normative perception that would be applied, for example, to a pickpocket by most people From educational to media systems, people are not afforded adequate opportunities to learn about and ethically evaluate pricefixing, adulteratex citrus, juices, hams, and poultry, deliberately fragile bumpers, unperformed but billed for services, suppression of life-giving innovations, and many other crimes which bilk the consumer. in Senator Philip Hart's estimate, of some 200 billion yearly (in the introduction to the book America Inc by Morton Mintz and Jerry S Cohen, pp 12-13)

All these fundamental flaws and systemic failures are a menace to whole populations. The hazards to health, life and property are escalating, because of reckless industrialisation. Scientists know perfectly well that built-in safeguards can prevent pollution, careful planning can pre-empt community calamities, toxic industrial effluents and the like.

But corporate behaviour and the corrupt clout hold the law at bay and corporate crime rarely comes to light as Bofors the security scam and the hawala outrage et al demonstrate undetected business crimes, tycoon culpability and communities being held to ransom in the economic field—the new AID syndrome are ballooning, what with the new economic policy showing undue hospitality to dubious industrialists a la Enron backed by almighty dollar. The legal process is too weak and dilatory; so much so, blue-chip corporate recidivists are rarely caught and more rearely convicted. Why? Because obiquitous corruption is the master of every situation. We need a jurisprudence with better invigilative capacity, finer social sensitivity and stronger, prompter punitive processes.

Is the only solution to make science and technology the vanguard of social advancement? What we need is universalism in blessing humanity as a whole with the basics of a good life, not abundance for small affluent oases and appalling indigent deserts for the rest world. A transformation of consciousness which indivisibly bind us all is the desideratum. Here, it is here, environmental planners and global technological managers have the role of planetary patriotism to play.

Markets make no meaning, luxury goods are but illusion, five star culture has no relevance, if science and technology are not humanised to benefit the humble and their blessings universalised. Alas, although formally socialist, the new trend in India is geared to survival of the fittest in competitive cannibalism. I see a degeneracy from the days of Gandhi and Nehru to the later Moghuls in Delhi, whose cults of epicurean 'affluenza' and 'west is best', have inhibited the creativity of the common people putting all the developmental eggs in the M N C basket. The M N Cs have no body to be burned, and no soul to be damned. Therefore, scientists must be the custodians of development where common people matter. Unfortunately, those in power are pachydermic. An apt quote which spells out the patrician pathology of the power elite runs thus:

We have numbed ourselves so that we do not feel the pain. We have to be asleep in order to protect ourselves from the horror of knowing that twenty-eight people, most of them young children, are dying this very minute—twenty-eight people no different from you or me or our children, except that we have food and they do not

We have closed down our consciousness and aliveness to a level where it doesn't bother us. So if you wonder if it costs us anything to allow millions to staive, it does it costs us our aliveness (*The Aquarian Conspiracy* by Marilyn Ferguson, p 456)

The scientific talent of the South, especially of India, is a large resource which can, if developed, accomplish self-reliance, indigenous initiatives and meet the needs of populations cheaper and better. Food self-reliance without imported fertilisers and

pesticides, industrial development pressing into service material available within the country and organising 'appropriate technology' for generation of power and avoidance of pollution are the new lines scientist-humanists must follow. Distributive justice, not isolated opulence, freedom from colonialism, not dependency syndrome, are the route to material salvation of third world humanity. World hunger is big business for MNCs, liquidation of the public sector and people's sector the policy of the IMF so that our national economics may drag on crutches. Trade traps, chemical traps, debt traps and death traps are the portents if the reservoir of scientific talent and genius cannot be motivated by a patriotism committed to the abolition of privation so as to go into concrete action with a focus on the specifics of each country. We need, therefore, a new world science-technology order, a new world economic order, where human solidarity prevails over kilkenny cat competitive market ideology. This is a summons for a new faith in the universal happiness of humanity. Walden Beilo, in his book Dark Victory, has a concluding paragraph which emphasises:

that human rights, peace, and environmental welfare are indivisible and transcend the boundaries set by state-limits supported by corporate capital in the name of 'national sovereignty' when it suits its objectives. It is the universalising logic of labour solidarity, community, equity and ecological sustainability that confronts the increasingly destructive combination of corporate expansionism, political counter-revolution, and tribal retrogression in the North While the former still has to attain a critical mass, it is by no means preordained that the future belongs to the latter (p. 115).

The foremost principle is reverence for environment and ecology. Growth that does not respect the natural world, its complexity and its sensitivity, limits itself. Resources are exhausted, ecosystems collapse, species disappear and our own physical and mental health and even our survival are threatened.

Mankind has reached a point where it is not enough to develop material wealth. It must now learn how to distribute that wealth fairly, and how to develop all humans to their full physical and psychological potential, in harmony with nature. West, East and South should be engaged in a process of learning from each other the concrete ways of achieving this (The Third World Ton prow by Paul Harrison, p 350)

Sensitive researchers, with a sense of accountability to humanity must fight the destructive diversion of natural and human resources for nuclear and other killer purposes and arsenals of weapons. Likewise, our wastes must be converted into wealth, our fifth turned to good use by a Midas touch, and our native resources exploited to serve better than imported glitter.

Let me cite a Kerala instance. Eco-friendly botanical pesticides must be tried seriously. Pesticides, often add to the problem of pests. For example, Kuttanad (Kerala):

faces the threat of a resurgence of pests and diseases in its paddy tracts, as the management of pest and disease control affairs has fallen into the hands of pesticides companies. What is worrying the agricultural scientists is the ruthless marketing techniques adopted by some of these companies (P Venugopal in an article titled 'Pesticides Add to Problems of Pests', *The Hindu*, dated February 8, 1995, p 5).

Our industries can put waste water to use. Our food processing can be designed with effluent treatment plants. So too our breweries, tanneries and instant coffee manufacturing plants. Our drug companies must be convicted of environmental guilt but can be given probation if only they adopt neutralisation methods. Health from bacteria, aquatic plants and other innovative wastes must be pressed into service. Our native pharmaceutical wealth has much to offer to healing humanity's suffering. Let us not patent away our ancient recipes and betray our treasury of herbs and pharmacopea evolved over millennia for a few pieces of silver.

We must be guided by the values of a moral order, not the appetites of a sensual system. Martin Luther King Jr rightly stressed:

The means by which we live have outdistanced the ends for which we live. Our scientific power has outrun our spiritual power. We have guided missiles and misguided men.

Loony industrialism may visit mankind with punitive justice, unless we change our development course. Regrettably, the victimology flowing out of distored technology may well visit misfortune over the innocent vast. There is no Noah's Arc even for the North. All will perish and none survive if the scientists' sector, exercising autonomy and swearing by humane convictions and liberating its conscience from corporate temptations, does not assert itself with spiritual authority and refusal to bend before political-military-corporate domination. Winston Churchill once said:

The dark ages may return – the stone age may return on the gleaming wings of science; and what might now shower immeasurable material blessings upon mankind may even bring about its total destruction. Beware, I say! Time may be short.

In the present world crisis, the collective call to all humanity, especially the scientists and researchers, teachers and technologists is 'do or die'

The woods are lovely, dark and deep, But I have promises to keep, And miles to go before I sleep, And miles to go before I sleep.

China's Rise, Russia's Fall: Politics, Economics and Planning in the Transition from Stalinism by Peter Nolan; Macmillan Press, Basingstoke, UK and St Martin's Press, New York, 1995; pp 360 + bibliography.

COULD the Russian reform programme have been managed with the gradualism that occurred in China, thus avoiding the disastrous decline in Russian output and standard of living? This is the central question examined in this work by Peter Nolan.

The book covers a comparison of both economies during the respective reform periods, an outline of the pressing need for reform in both countries, an account of the nature of the transition process to a market economy, a discussion of the respective benefits of 'catching up', and then a historical resume of the transition in each economy, with some final conclusions. The book is excellently documented and referenced, and clearly presented (although it could have benefited from closer proof-reading and editing).

The contrast between the two countries during reform could hardly be more striking. China, after Botswana, has, according to World Bank estimates, had the highest rate of growth in the world since 1978 (when the reforms began), approaching an average of 10 per cent annually (and nearly 12 per cent between 1980 and 1991). There has been a huge increase in popular consumption, especially of consumer durables, a major decline in infant mortality (by 46 per cent. 1981-91, compared to India's 26 per cent, although China in 1981 was much better than India in 1991), and in poverty (the population below a constant poverty line, again according to the Bank, fell from 270 million in the late 1970s to 100 million a decade later). For the rural majority, the real rate of growth of farm output increased by 1.4 per cent annually (1957-78) and 5.4 per cent (1978-92; 8.5 per cent, 1980-85), while the share of cultivation in village gross income fell from 69 (1978) to 36 per cent (1992) with rural industrialisation. China's progress in the 1980s must be a historically unprecedented transformation for such a large proportion of the world's population - never before have so many people experienced such sustained improvement.

The period for Russia is much smaller, but the decline in that time has been little short of catastrophic – a 44 per cent decline in gross output between 1989 and 1996 [EBRD 1996]. Unemployment on the official figures has not been significant, but there seems to have been a sharp increase in poverty, a general decline in the standard of living (by possibly up to a quarter of net income), and a sharp increase in inequality. Perhaps the most horrifying symbol of long-term decline (as opposed to the immediate effect of reforms) has been the decline in the average expectation of life at birth for males – from 65 in 1989 to 57 in 1993.

Thus, Nolan's argument is of great importance. The Soviet Union, he says, could have emulated China, in which case it would still exist. In terms of the conventional wisdom, it is a perverse argument, and for that we should be grateful and applaud the courage of the author in presenting an unpopular positio. He forces us to rethink the case, now reiterated in some detail in the latest World Development Report [World Bank 1996]; an earlier presentation of a similar case occurs in Sachs and Woo (1994). Furthermore, if Nolan is right, he offers a partial vindication of the old social democratic orthodoxy that the state can (and should) be employed today as in the past both to decisively restructure the domestic economy and to determine the pattern and pace of economic growth. Nolan runs up a banner for the old reformist left, and in these troubled time, that is worth noting.

However courageous the attempt may be, ultimately it is not convincing, and at various points, the argument is, if not confused, confusing. There are a number of key points in the arguments worth examining separately; they are presented here in no particular order of importance.

### (1) Is gradualism in government action invariably good?

One of Nolan's key arguments is that society is so complex, no government should undertake rapid comprehensive reform, only piecemeal, cautious and experimental change. It is a curious argument for a pragmatist (which Nolan counts himself) – as opposed to an ideological conservative – since the speed of a process needs to be determined by the aims and circumstances concerned. Wars, emergencies and crises, for example, usually require speedy and comprehensive reactions, and gradualism as a reaction constitues iresponsible complacency. As Tawney is said to have observed: you can

skin an onion leaf by leaf, but not a tiger claw by claw. Was Russia in the late 1980 an onion or a tiger?

Nolan doest not answer the argument for speed in the Soviet reforms, as presented for exmaple in Aslund (1991: 221): "If the economy is in steep decline, gradualism equals the prolongation of economic suffering. Therefore, a swift change of system is necessary for the population's welfare." Nor does he respond to the additional argument that the crisis in the Soviet Union provided a rare opportunity for retorm that would not last long before being stifled, as all the other reform efforts were, by vested interests. Indeed, by implication, he does not seem to believe there was such a crisis (even though elsewhere he well describes the growing difficulties of the Soviet Union), so that the behaviour of Gorbachev and his followers becomes inexplicable.

## (2) Does the Soviet/Russian reform programme constitute 'shock therapy'?

However, analysing the Soviet/Russian reform programme as an example of rapid reform is somewhat bizarre. There was no Polish-style 'Big Bang', and the programme, still far from complete, has so far run for seven years. Gorbachev, the target of much of Nolan's ire, introduced only limited reforms before retreating to defend the old establishment, to the fury of the rest of Russia (now reflected in his derisory share of the presidential vote). Under Yeltsin, there have been four phases of reform, each defeated by political events and leading to the fall of the reformer (Gaidar in December 1992. Federov in January 1994, and Chubais in January 1996). The Russian case was, for those western advisers who favoured rapid comprehensive restructuring of the economy, a failure. The much better cases for assessing rapid reform would be Poland or the Czech Republic. After twp years of severe decline, they have now made a strong recovery in terms of growth - with Poland reaching a 6 per cent growth rate in 1994 and 1995, with something similar projected for 1996 [EBRD 1996]. But those cases would defeat Nolan's argument that rapid reform leads necessarily to disaster. However, of the 26 countries in eastern Europe and the former Soviet Union, the diversity of performance is immense, so restricting our view to Russia is seriously distorting. The World Bank is arguing that swift reform - in Poland, the Czech Republic, Slovenia, Slovakia, Hungary, - has been followed by rapid recovery; slow reform in the Ukraine, Belarus, Turkmenistan, Tadjikistan, Uzbekistan, has gone with continued decline. However, the diversity is so great, such simple deductions encourage sceptism on the argument of Nolan and the World Bank (from opposite sides) that speed per se is the key explanatory variable.

# (3) Could the Soviet Union/Russia have been reformed gradually?

Nolan argues that the possibility of gradual economic reforms in the old Soviet Union was sacrificed to Gorbachev's obsession with the primacy of political reforms - as a result, the state collapsed and the possibility of any reform disappeared. He sees great potential wasted: "There were large possibilities in Soviet agriculture as in Soviet industry for releasing surplus labour to undertake labour in other sectors" (p.125). Or again: "The introduction of a suitable incentive system could have released a greatly increased intensity of labour and hugely raise output from existing resources" and "relatively simple institutional changes had the potential to produce large improvements in efficiency and release labour and a much increased share of investment for employment elsewhere in the economy" (p 149).

Why then did the government not pursue these simple options? Nolan does not really explain why the leadership was so apparently irrational, except in terms of some enslavement to 'American ideas'. He does not accept the conventional explanation that the institutional structure of the old Soviet Union neutralised any economic reform efforts that might reduce the power and privileges of the bureaucracy. He replies: "It is not obvious that it would have been impossible for Gorbachev to devise a coalition of reformers at the top of the Party" (p 242) This is not good enough because the evidence does suggest just this - or at least, even with this coalition of reformers, Gorbachev's writ would not have extended beyond the politburo.

It is here that Nolan's account cries out for a detailed examination of why the 30 years of previous reform efforts failed, or at least, could not be sustained. As Yeltsin (1994.147) notes, "Russia's trouble was never a shortage or abundance of reformers. The trouble was an inability to adhere to a consistent reform policy". The inability derived from an institutional structure, dominated by the great central ministries and the military industrial complex which stifled reform. Here Nolan's view appears bizarre,

"I ne Gordachev regime innerited a country that was politically stable... it possessed a powerful administrative apparatus in the shape of the Communist Party" (p 256). With the benefit of hindsight, we can see that this just was not true - the speed of the collapse of the party indicates how decayed it was, as partly admitted by Nolan elsewhere, "It can now be seen that the communist system was brittle...there was no possibility for careful, controlled reform, gradually releasing the 'safety valve' of political control (p 300). The choices, according to Nolan. were either the continued rule of the Communist Party and an authoritarian state or chaos - there was no possibility of democracy. Of course, we have just seen 108 million Russians deliver an apparently fair and open election, 55 per cent of them opting for Yeltsin, so Nolan's judgments here have been, for the moment, rather overtaken by events.

Somehow, although Nolan presents the data accurately enough, he leaves out the peculiar character of Russia - a heavily industrialised urban society, with a large and sophisticated middle class (compared to China); a war economy, dominated by a set of very powerful centralised ministries, with little potential for commercial reorientation, and held in place by a global military contest with the US (the role of Reagan's Star Wars initiative in breaking the Soviet state should not be underestimated); and a society characterised by growing shortages, a deteriorating economic performance (with a disastrous decline in capital productivity) and an increasing incapacity to meet its central rationale, the ability to match the US

The capacity to reform, gradually or swiftly, started to die with Stalin. The general secretary's regime of terror was the precondition for moving the bureaucracy, the 'incentive' in Nolan's terms. There was a moment for a change of direction after Stalin's death - as illustrated in the Liberman proposals on the reform of plant management or Khrushchev's Twentieth Congress speech -- but this period was the height of the cold war, so external terrors immobilised radical reform. Notan sees the death of Stalin as allowing the Communist Party to move "towards increasing pragmatism, routinisation and steady progress towards the emergence of a better educated technocratic clite". This is not the right formulation without terror, the bureaucracy could settle down to entrench its position to control all, including the general secretary; it led to stasis if not sclerosis, under a "relatively autonomous state". Under Brezhnev, stasis threatened to become paralysis. The only thing holding the whole together seems to have been the cold war, the external fear, and even that was growing weaker.

Ciorbachev's achievement was not so much domestic reform as in changing the relationship of the Soviet Union to the US, removing the lynch pin of the Soviet order and thus directly threatening the positions of the military industrial complex, the central element of the bureaucracy. In doing so, he began to reveal how little legitimacy the Party still retained; restoring its legitimacy, he calculated, required a reduction in - but not the destruction of - the great centres of power. Too late he learned that he himself and the Party would hang together - as Mao learned in 1968 and swiftly drew back from 'Bombard the Party headquarters' to the safety of the army - but Gorbachev left it too late to stop Yeltsin and a new Russia overtaking him.

Thus, Nolan's optimism that economic reforms in the old Soviet Union could have succeeded without prior political change does not seem justified - although equally his belief that political reform was impossible without the destruction of the Communist Party seems well - founded, although no one could know that in advance. The state needed to remove – or reduce – the external pressure of competition with the US and restore the political legitimacy of the Party as the precondition for undertaking successful and far-reaching economic reforms, a package which, with the benefit of hindsight, now seems impossible. Gorbachev succeeded in the external change and the destruction of the central ministries without being able to provide any effective alternative to the central allocation system - both CMEA and the Soviet Union were casualties, without taking into account the severe hardships imposed on the population. In initial conditions of great scarcity, the collapse of the allocation system led to very severe shortages, ameliorated only by the swift growth of the black economy, factory-to-factory barter systems and imports, Nolan, underestimating the scale of the crisis, deplores the use of imports to meet current consumption needs instead of 'growth-enhancing' investment. not remembering perhaps that the miners struck (thus hitting exports as well as domestic supply) not for increased pay but increased goods. In the short-term, imports were an indispensable incentive to keep people at work.

Privatisation in these conditions was not so much a means to increase efficiency, but a way to create new control mechanisms and dissolve a social order – much as in England Henry the Eighth's dissolution of the monasteries dissolved one social order and created another more local one. In both cases the change opened up great resources of wealth for private spoliation, creating a new heavily-bribed social class to support the new status quo. Sutela (1994:418) notes "breaking the ownership position of the

ranch ministries was the overwhelming riority if the irreversibility of the transition was to be ensured... the speed deemed necessary could not be attained without bribing the insiders'.

Thus, it was the politics of the reform process which was paramount, not - pace he foreign advisers - the economics. It is his political dimension which is strangely missing from Nolan's account. The 'stake-nolders' (or 'those in positions of authority aking the capitalist road' for those with nemories of 1966) reshaped the reforms in he interests not of economic efficiency but o maintain and extend their power.

#### 4) Was China Stalinist?

Nolan's account of China is better leveloped than that of Russia, but in order o support his argument, he is obliged to exaggerate the similarities between the two countries—"It cannot be said that the Chinese pureaucratic apparatus or tradition of centralised rule was weaker than that of Russia" (p 154). But indeed it can and should be said—and Nolan says it, "These features of the setting in China helped produce a high degree of 'self-reliance' at every level of the economic system far beyond that normally characteristic even of a command economy" (p 132)

China was necessarily always much more decentralised than the Soviet Union and Russia. The great central ministries with a sectoral reach from Vladivostok to Vilnius, overriding the supposed constitutional rights of the Republics, had no parallel in China cf White, 1993:22]. From the days of guerrilla warfare through to the role of the provinces in the Great Leap Forward or the Cultural Revolution, the Chinese system stood in marked contrast to the Soviet Indeed. t was the reality of provincial party leaders unning 'little kingdoms' which was such a cey target in both the Socialist Education Campaign of the early 1960s and in the Cultural Revolution. In 1968, Mao gave up he task of reforming the party through the mobilisation of extra-party forces (the uckless Red Guards), and empowered the regional commands of the People's Liberation Army to restore much of the old leadership of the provinces, that is, restrengthening exactly the forces which were supposedly the obstacle to Mao's aspirations. The defensive reactions to the armed clash with the Soviet Union on the Amur river in 1969 likewise legitimised and strengthened local self-reliance and provincial power - leading to the 'cellular order' so well described at the time by Audrey Donnithorne (1972) and cited by Nolan. Of course, as a party of supposed orthodoxy, the Chinese leadership invariably described the party and administrative structure as if it were Stalinist, highly centralised, and for

a brief moment under the spur of the Korean War, it was, but in general it is strikingly contrasted with the Soviet model. It was lucky for Deng Xiaoping that it was – can one imagine a dissident Russian leader, with Moscow seeking his death, fleeing to the Ukraine or Siberia, surviving and then inheriting power?

By the time we reach the reform period, the degree of decentralisation was extreme, and China was held together by annual bargaining between province and centre, locality and province. The World Bank (1994: xiii) notes that "individual provinces are tending to behave like independent countries, with an increase in external (overseas) trade and a relative decline in trade flows with each other". And Nolan himself observes that "Chinese townships (xiang) governments resembled mini nation-states" (p 216).

If the central bureaucracy was very much smaller—indeed, notoriously so—the degree of industrialisation was relatively much smaller and the urban middle class tiny (relative to Russia). Even more important, China was not locked into a military competition with the US, not aiming to match every increase or change in US defence policy—a relationship which enslaved the Soviet military industrial complex, the heart of both the old Soviet Union and the CMEA, to external imperatives. China was part of a local arms competition, but economically, it could be no more than a distant echo of the global play.

Furthermore, when reform began in the Soviet Union, it was over 30 years since the death of Stalin, since the scourge of terror had been removed, allowing the bureacuracy to entrench itself as an apparently immovable easte. In China, it was only two years since the death of Mao and the bureaucracy was still exhausted from the unstable and arbitrary scourging of the later years of the Cultural Revolution - most were perhaps just quietly grateful for a bit of peace and stability. They still had to be bribed with opportunities in the new market economy, but they were in no position to obstruct the reforms. The Cultural Revolution made possible the programme of gradual reforms - as Liu Binyan, the dissident Chinese journalist, observes: "most Chinese would probably agree taht the reforms since 1979 under Deng Xiaoping would never have taken place without it [the Cultural Revolution (cited Financial Times, May 17,

As for political legitimacy, the political class, the urban middle class, was too small to be able in 1980s to change the Chinese balance of power. The dissidents were able to go as far as they did in 1989 only because the leadership was divided – and when an effective coalition of the military and political

leaders could be engineered (and it took quite a time), they rode roughshod over the opposition, indifferent to the effect of this domestically or abroad in damaging their claim to rule. With a majority peasant population, in the short-term the regime settled for silence and obedience if not respect, let alone love.

Nolan notes many of these differences, but still maintains that the central direction of China was as effective as that in the Soviet Union, even though by now it is not very clear any longer exactly what Bening controls (it will take a systemic crisis to test the reality of its power). For Nolan, the central party leadership is benevolent and wise, rather like Plato's fictional Guardians, and graciously concedes decentralisation on pragmatic grounds - "The granting of increased autonomy to localities as market forces grew was arranged in a planned fashion, gradually spreading out .." (p 178). This omits all the messy struggles of reality in which power is seized by the provinces, prized out of the hands of the centre by bullying and blackmail, stubbornly defended and extended in the face of central opposition or disapproval. We have no sense of the arguments and deals struck in smoky rooms, the permanent fights between centre and provinces (and provinces and localities), and the straight refusal of lower echelons to obey central directives. Government as organised chaos is missing.

Nolan gives the Chinese regime an extraordinary blank cheque - the "national interest was unswervingly placed above individual interest" (p. 179) or again, "Repeatedly, the interests of the individual and different social groups were subordinate to those of overall national prosperity" (p 225). This daydream world is not apparently an official government hand-out, an echo of ancient Stalinist lies. Would not Yeltsin - or indeed, John Major or Bill Clinton or any other head of government - make exactly the same claim? How does Nolan know what China's 'national interest' is? The suppression of Tibet or the 1989 Tiananmen Square campaign?

### (5) Is democracy compatible with industrialisation?

Nolan argues that Gorbachev was in grave error to raise the issue of human rights in Russia. In his view, the right to work, to eat, live safely, have access to education, housing and health facilities are more important than the right to vote, speak freely, publish what you will and own property. If material welfare is accepted as the top priority, then Nolan says we should favour those political arrangements which are most likely to lead to this outcome—and in his view, that means the Chinese Communist Party, not the Russian Duma.

He broadens the case, arguing (p 64) that democracy is incompatible with industrialisation founding his case in the history of both Europe (developing before the arrival of voting, etc) and the Newly Industrialising Countries(NICs). The key to NIC growth, he says, repeating a currently fashionable doctrine on the Left, was a "relatively autonomous state", which was committed, like the Japanese, he continues, "to the profit motive and the market mechanism". Now this embodies an interesting confusion. Was the Japanese or South Korean or Taiwanese - state committed to these things? The historical evidence would suggest that it was not so - profits and markets were tolerated by the state, with a certain amount of contempt, as means to build national economic and thus military power, the power to deter or kill those seen as enemies; economic development was a by-product not the aim. Thus, the 'relative autonomy of the state' has in itself no significance for economic development without the primary motivation, in this case the drive to develop the means to kill. After all, there have been a large number of 'relative autonomous states' that have devoted themselves wholeheartedly to robbing their luckless citizens. Indeed, one might include Brezhnev's regime as a relatively autonomous state ensuring stagnation in the Soviet Union.

The broader argument, so favoured by tyrannical regimes everywhere, is at best confused. India's slow growth, Nolan believes, is because the country is democratic. But is there evidence that mere voting afflicts the economy? Or is it rather that clusters of interests, large private business, public corporations, groups of politicians and government departments have colluded of secure profits and low competition? And that can equally well happen under an authoritarian as a democratic regime

Nolan is for democracy but not for industrialising countries: the material conditions must be created first: "the best way to establish firmly rooted democratic rights is to first ensure the development of the productive forces and increases in income" (p 68). He accuses the Western powers of hypocrisy because they refuse to acknowledge their own histories where forces and authoritarianism were employed to ensure economic growth and national unity.

However, the fact that historical circumstances change cases seems to escape Nolan. He remains an historicist where the 'country' is the dominant character in the historical drama, and the country, like an individual, presumably goes through stages of maturation, independently of historical circumstances: the past repeats itself. However, the significance of voting and civil

rights today has nothing at all to with that in 1750 or 1850 (any more than the computer has), and this is true in all countries (as is the significance of the computer), the British army will not invade Scotland if the Scots vote for independence, nor the Canadians Quebec, but they may have done a century ago. They will not repeat Chechnya or Tibet. The dissolution of Czechoslovakia shows that the way of the dissolution of Yugoslavia is not inevitable.

The argument about democracy is naive because it ignores the fact that the state, its departments and its officials, have their own agendas which do not necessarily coincide with the interests of the citizens, and indeed may contradict them. Do the majority of Chinese want to continue killing Chinese young men and Tibetans in Tibet? Does the majority of Indians wants to continue killing Indian young men and Kashmiris in Kashmir? Neither are oftered the choice that is exclusively appropriated by the state. Nolan's argument is subject to the same reproach he directs at foreign advisers - he does not have to suffer the tyranny he applauds. The inconsistencies do not deflect him - he reproaches the Soviet and Russian reform programmes for being imposed on the population without democratic consultation.

The problem with the state is not only does it despose of immense resources, it monopolises the legitimate use of physical force, it aggregates major information resources (including an alarming capacity to he), and it makes, or changes, the rules to suit its convenience – and whatever it does is neatly redefined as 'the national interest'. Once an authoritarian order has secured its power, the immense machinery of rentseeking, it is extremely difficult to remove or reform it. Why is Nolan so sure that the order in China is the best that can be hoped for, Gulag and all?

Opposition to democracy for the poor goes with Nolan's defence of the existing political map, without reference to the wishes of the inhabitants. He much regrets the breakup of what he persists in calling the 'nationstate' of the Soviet Union (in contrast to the Soviet order which identified itself as a union of nationalities). It had, he argues, established a solid historical existence and was "part of Imperial Russia since at least the middle of the 19th century". It is a curious Burkeian argument that the passage of time itself creates legitimacy - presumably on that basis India should still be part of Britain or Algeria part of France. Nolan resists the right of people to national selfdetermination, and so is driven to quite reactionary implications. We must presume he approves of the Russian action in Chechnya, the Chinese in Tibet or indeed the repression of the 1989 Tiananmen

Square dissidents. He does not say why people should be obliged to accept the existing distribution of power unless it is that any state is better than instability, nor what the interest of the world is in the integrity of existing states.

Perhaps he feels that a state is the necessary precondition of economic growth, which in turn he - like the World Bank and Karl Marx - sees as dissolving the desire to break up the state on ethnic grounds. He says that Soviet state economic growth, "providing opportunities for different ethnic groups and through the homogenising power of the market, could have been a powerful force reducing ethnic conflict" (p 71); or again, "successful market and income growth is a powerful force leading to the disintegration of ethnic differences" (p 156-57). This is heroically economistic, and should be drawn to the attention of the Quebecois, the Irish, Scots and Welsh nationalists, Sikhs. and Sri Lankan Tamils, the Basques, the Catalans and many more. The evidence might suggest the reverse-economic growth may exacerbate ethnic divisions, pushing the more prosperous to seek to shake off the less - political fission may be the result of economic fusion and growth.

For Nolan, everything which might conventionally restrict economic growth is to be opposed, and here he comes precious close to the conditioned reflexes of small employers. Trade unions must be prevented from establishing a monopoly of the labour market. Yet apart from a few craft unions for temporary periods and outside the fevered imagination of some business associations, is there any evidence that trade unions have been able to conquer the labour market? Slump and unemployment give the lie to the thesis. Only with the active collaboration of the state can a monopoly be established over the labour market - and that is organised by the power of the state rather than the workforce. Nolan also approves of the Chinese refusal to give legislative protection, minimum wages or the right to organise trade unions to rural hired labour - in contrast to the situation in India - because, he says, frequently' this encourages the substitution of capital for labour (p 181). Again, what is the evidence? Can the government of India implement its aims in this field, and if it could, would the effect on costs be so dramatic that it would produce a significant cheapening of capital?

Circumstances change, and this is an irritating obstacle to the abstract general theories in which economists delight. Democracy may be becoming more important in many poorer countries both to sustain social unity and develop some sectors of high productivity that require the full psychological participation of the labour force. If this is so, the steady

democratisation of the NICs would not be taking place because they had arrived at a given stage of national development where the masses could be rewarded with a voice for their loyalty, but because the circumstances of modern global capitalism makes higher levels of popular participation important for all countries, something the Chinese government will have to learn painfully in the future if it is to do all that is required to protect China's unity.

## (6) Is policy and planning decisive in the development of economies?

Like the World Bank and others, Nolan believes policy is invariably decisive in the behaviour of economies, that governments can freely choose their policies in the light of pragmatic considerations (especially if they are not required to hold elections or present a favourable image), and that if they apply the same policies in different countries, the effects will be the same. Even stating these assumptions - so common in economics - exposes their implausibility. Policy is only one component in the picture and may be much less than decisive. Governments are reactive rather than initiating (which is why so often parties with supposedly different political persuasion behave identically in office), and since each economy is in important senses unique, the same policy rarely produces the same effects. Circumstances change all cases.

Nolan also inclines to the view that, in principle, governments are distinterested and benevolent. The Russian government had it within its power to plan privatisation in order to prevent the growing inequalities occurring, as China did without privatisation However, as mentioned earlier, it is not clear what the role of government is in China, and it would be heroic to suggest that it has had clear influence on the distribution of income. Nolan accuses the Russian government of abdicating from the process of privatisation when it clearly did not - it colluded with the managers to secure its own power. He argues that if the process had been slower and more experimental, favouring the insiders could have been avoided, but this may be true only if enhancing efficiency or equity had been the intention of the government.

It is the absence of the political dimension which is so worrying in Nolan's account. There is a good illustration of this in his discussion of the importance of preserving large concentrations of capital to protect the economies of scale. He approves of the Chinese policy of seeking to foment industrial groups of major size, perhaps 50 in all, as models to the rest. He urges the Russian government to try to keep the giant corporations in key sectors of the economy, otherwise the losses to the economy, he says,

would be very high. The planners, he suggests (p 101) should undertake "careful studies" (a typical planners' phrase, as if anybody favoured careless studies) to see which corporations could be competitive, employing import protection to sustain them. "The government must try to reorganise large-scale industry into structures that can benefit from economies of scale but also behave competitively rather than in an oligopolistic or monopolistic fashion" (p 101). What can this imply? The government hires management consultants to turn the corporation round, awarding them draconian powers to implement their proposals and ensuring the corporations cannot mobilise its friends and clients in government to block the changes?

There is no way in which planners can accurately assess the economies of scale except by submitting the corporation to the full rigours of competitive markets, careful study or not. The reason that it is difficult to so expose them is that they are great concentrations of political power, great means to fix through the state the economic context of their operations. Consider Gazprom in Russia, among the largest corporations in the world, protected from paying taxes by Chernomyrdin, its founder, major shareholder, last Soviet minister of energy and now again Russian prime minister, and its army of clients. It is estimated that if the corporation were obliged to pay its full taxes, this would equal 2-3 per cent of the gross domestic product, and would cover the budget deficit. It is the politics of the great corporations which is the problem - and there is no way to find out whether there are economies of scale while their political power is capable of controlling the economic environment. Nolan feels that with the right stable legal, political and administrative framework, Russia could attract substantial foreign capital into the extraction of raw materials - but not in circumstances where Gazprom and the other raw-material giant corporation block entry. How does one move on gradual reforms faced with such obdurate resistance - and such political support for the corporations within government itself? How will the Chinese government cope with its 50 giant industrial groups, combining political privilege and thus market domination? Nolan is aware of the political problems of the size of the private multinational corporations, but at least they are exposed to open markets; he is strangely insensitive to the problems of the political weight of state corporations.

The political order provides crucial constraints on anything planners can offer. Notan is good on outlining the failures of planning in the Soviet Union – not planning at all in his view, but 'administration' – but

he does not speculate how far the problems are intrinsic to state action. Even the failures need qualification since we need to specify the overriding aim before we can evaluate this. Soviet planning was very good in building and, for long, sustaining the military capacity of the country (like planning in Nazi Germany in the 1930s) – and that central rationale supposedly justified tailures elsewhere.

Nolan reserves special fury for the foreign advisers, the International Monetary Fund and the World Bank, in the evolution of Russian economic policy. Indeed, if he has any explanation for the apparently irrational behaviour of Gorbachev, it is that these foreign forces led an inundating wave of western opinion, swamping Russia's flimsy intellectual defences. It is they, he argues, who defined the programme and the speed, the sheer brutality of the reforms - and they did so, knowing that they, unlike the hapless Russians, would not have to suffer the consequences of their choices. As for their Russian governmental creatures, the "intellectual 'compradorer" (p 252), they were bribed with the possibility of foreign academic fellowships and other perks to do the bidding of the foreigners. By 1994, when the bulk of the book ends, the government had, says Nolan, "ceased to have an independent economic policy... [and was] forced to comply with the conditions imposed by international institutions" (p 286). Steeled by international agencies, the Russian government prepared to face the inevitable wave of bankruptcies as they obediently tightened credit for "its policies were constructed at the direct instigation of the major international capitalist institutions" Of course, the foreign advisers argue that conditions in Russia were completely different from those in China in order to avoid the charge of their own failure.

This is an entertaining if slightly paranoid account. But if taken seriously, it is bizarre. At one stage (p 251), Nolan admits we do not know the degree of influence of the foreign advisers, but then quickly affirms that "at the very least, they played a large role in bolstering the confidence of those in government who favoured 'progress', 'radical solutions'". But then again he is obliged to admit that the programme was suspended because of political opposition (p 252), and the government returned to "cautious reform" - even so, he stoutly maintains the foreigners constituted a group so powerful it would have taken great strength by their Russian counterparts to resist "the seductive line of thought presented by the 'experts'".

The style is equivocal, indeed, contradictory, precisely because it is a fantasy account. There were no waves of bankruptcies

(soft budgets saved the day), there was no 'Big Bang'. The foreign advisers do indeed have an interest in proving they were effective, but all the evidence suggests they were not. The central battle in the foreground was the political one, not the economic, and it was between people who represented something in Russia, not those with nothing but good ideas (or had ones) to recommend them Whenever serious political issues were at stake, foreign advice counted for nothing. More impressive than the positive influence of the IMF was its impotence, its incapacity to sustain the commitment to reform, to hold public expenditure - even down to the failure to prevent the immense expansion of military spending as a result of the Chechnya war, or the extravagance of Yeltsin's presidential election campaign

The substantive point is not important, except that 'blame the foreigner' is exploited by every government in a tight spot to avoid responsibility, and the Left has played the same nationalist game. Responsibility for Russia's reforms, warts and all, rests squarely with the Russian government, and Nolan should not seek to assist it to avoid that responsibility by wildly inflating the role of favourite international bogies (whose failure to influence events is so much more impressive than their successes).

#### (7) Is market-socialism feasible?

At several points (for example, p 55) Nolan is scornful of those who argue that it is impossible to reconcile markets and 'socialism' (by which he seems to mean, not mass liberation, but state direction). But he does not show why this scorn is valid, he does not reply to the argument. In the same way, he attacks the 'doctrinaire' approach to privatisation without confronting the argument that for competition to work, those who direct firms must risk their own capital and be subject to the 'incentive' of avoiding real bankruptcy. In principle, of course, there is no reason why governments should not emulate in the public sector such sanctions (Stalin was not above shooting managers who failed, a sanction stronger than mere bankruptcy). But in practice, the social linkages between bureaucracy and state managers as well as the political vulnerability of the state to failures in the public sector usually means managers cannot even be sacked for losses. The importance of privatisation is that, in principle, it removes bankruptcy (Nolan's "release of capital and labour' for other sectors of the economy) from the possibility of political intervention or blame.

China is now a market economy. Indeed, so powerful is its market drive, it seems often to be outside the control of government. But Nolan sees no more than a redefinition of

socialism — "planning for economic growth through the use of markets and combining individual incentives with preventing the rise of a dominant capitalist class with a large concentration of individual wealth". But this is a fudge, for China does indeed have a 'dominant capitalist class', even if its base is in the state-owned enterprise sector, and it has a large concentration of individual wealth (have a look in the Shanghai Hilton, as ridiculous a display of ostentation and extravagance as any society, and packed with China's new rich).

Nolan does not answer the question: what is the central drive of the Chinese economy? Do state decisions or market imperatives driveit on? The evidence suggests the second, with the state being essentially reactive (as it is in most other countries) to changes generated elsewhere. If this is so, 'market socialism' is an ideological fudge to allow capitalism to continue without inciting opposition.

There are many other points in Nolan's book which deserve comment, but this review has already gone beyond the limit of patience of the reader. The sole justification for the length is that in the reconstruction of the Left, there are dangers of retreat. Circumstances in the world have changed decisively - and the Left, for so long the leader in radical or revolutionary progress, dedicated to daring new thought and rapid social change, has been overtaken on the right. It is on the free market Right (as opposed to the corporatist Right) that wildeyed idealists are in a hurry to change the world, to shake the mountains and think the unthinkable. The Left has too often become no more than the defender of the past, opposing change or allowing only gradual change. The argument for universal liberation degenerates into a defence of public rent-seeking, of the war-making state.

Under the impact of a shock that destroys a conceptual framework, people often respond too little and too late, thus avoiding the impact of defeat but at the price of growing irrelevance - like the devotees of a dying religion. It is only possible by sacrificing the spirit to the letter, by refusing to learn new things. What was being created by the students and others in Tiananmen Square or on the Berlin Wall, throughout eastern Europe and the Soviet Union, was indeed liberation, the essence of the old struggle for socialism; we reject it at our peril. The world has seen aging Leftist dictators, now become tyrants, mouthing the old slogans while filling the prisons. Consider the sad comment by Nolan on, for him, a symbol of Russia's deterioration, the 1990 May Day Parade, "the Hare Krishna religious sect and anarcho syndicalists, social democrats and anti-Stalinists, and, at the front, a monk from the Russian orthodox monastery at Zagorsk" (cited p 237) instead Nolan says, of "the annual well ordere review of Soviet military might". Does he really prefer a parade of fearful Soviet means to slaughter people, staged as a shout of frighten, to the unruly, messy reality of real liberated Russia? Does he really prefet the lie?

History has by no means ended. Pete Nolan is brave in trying to draw up a balanc sheet so early. What will we say in 2005 i Russia is growing economically and Chin wracked by political divisions because th old order left it too late to create the publi mechanisms to mediate conflict?

More important, the issue of mas liberation, of the democratic control of th material conditions of life in a workeconomy, remains, and will return as a ke element in world politics. The Left will need its courage if it is to be relevant to that question, not, as has often happened in the past few years, hiding behind the crumbling fortifications of the national state. Rese assured that the Chinese government, like all the other governments of the world (including the Russian), will be firmfor opposed to any such movement, trying to uphold the old order.

Nolan has provoked much thought. Fo that, much thanks.

# Marriage, Sexuality and the Female 'Ascetic' Understanding a Hindu Sect

#### Prem Chowdhry

An analysis of the Brahma Kumari sect in its initial years enables us to unravel certain hidden aspects of Sindh society which account for an unprecedented but successful patriarchal attempt to regulate and restrain female sexuality or stimulate its self-restraint under the all-encompassing claims of reforming society. In the later years, with the coming of the partition and subsequent migration to India, this sect, confronting a greatly changed social milieu, assumed a somewhat different focus and identity. Despite this shifting of emphasis and consequent contradictions, the core doctrine of celibacy has remained and its advocacy of female sexual control continues to find receptive echoes.

The author's analysis highlights the multiplicity of motives, both obscure and apparent, behind the acceptance of the sect in the contemporary period. Faced with yet greater intricacies of socio-economic issues, the central thrust of the sect continues to contribute to its success in breaking out of its high caste and class complexion and in carving out a committed middle class urban following.

IN the late 1930s, a Hindu sect popularly referred to as the 'Brahma Kumari' had a highly controversial beginning in colonial Sindh. As is clear from its nomenclature which means 'daughters of Brahma', or more appropriately 'virgins of Brahma', it focused almost exclusively upon women. Although initially known as 'Om Mandli' it soon changed into Brahma Kumari to signify the preference accorded to females reflected in the sect's central doctrine and the following it commanded. This female centred exclusivity touched upon important questions of female sexuality and marriage, which were extremely problematic in the colonial Sindh society. These social tensions and undercurrents not merely moulded the contours of this sect and accounted for its initial popularity but also made for a vehement and violent hostility to its existence. These dramatically opposite reactions drew upon the unorthodoxy of the sect which extended the principle of purity and spiritual salvation to women based upon the concept of celibacy. The consequent attempt of the sect to control female sexuality and/or its sublimation brought to the forefront the contradictions within the sect and the colonial Sindh society in dealing with matters sexual. In fact, this concept came to hold different meaning for females of different status and age groups and manifested a duality of sexual control on women: one which suggested a patriarchal control outside the institution of marriage and therefore repressive in nature and reactionary in ideology; and the other, a selfcontrol of sexuality which had a liberating potential for women and enabled transcendence of sexuality for higher spiritual gains. In this the sect provided a socially recognised space outside domesticity and marriage, which incorporated elements of both repres-

sion and sublimation for women. For providing this space the sect posited itself as a family outside the family: a spiritual, non-sexual family as a 'safe haven' for its female followers against the normative sexually reproductive family; an attempt which fell between the polarities of the world of the householder and that of the renunciator an attempt which simultaneously proved to be its greatest weakness and a source of strength in different time periods.

An analysis of this sect in its initial years of formation enables us to unravel certain hidden and unknown aspects of Sindh society which account for an unprecedented but successful patriarchal attempt, however limited, to regulate and restrain female sexuality or stimulate its self-restraint under the all encompassing claims of reforming society. In the later years, with the coming of the partition and subsequent migration to India, this sect, confronting a greatly changed social milieu, assumed a somewhat different focus and identity, highlighting the social dynamics which has its own logic in different situations and periods. Despite such shiftage of emphasis and consequent contradictions, the core doctrine of celibacy has remained and its advocacy of female sexual control continues to find receptive echoes. Seen through a series of case studies, the analysis highlights multiplicity of motives, both obscure and apparent, behind the acceptance of the sect in the contemporary period. Faced with yet greater intricacies of socioeconomic issues, this central thrust of the sect continues to contribute towards its success in breaking out of its high caste and class complexion and in carving out a committed following from among middle class urban-based constituency of postindependent India.

# Initial Years of Formation: Concept of Celibacy

The Brahma Kumari sect in its original manifestation of Om Mandli was established in mid-1937 in Hyderabad (Sindh) by Lala Lekhraj Kriplani, a rich jeweller by profession. In establishing the monastic order primarily for females, Lekhraj clearly drew upon the highly developed ascetic tradition of Jainism which flourished across the border in Rajasthan where Jainism had special monasteries for its female followers. Ideologically located within Hinduism, the sect however remained highly eclectic both in its transplant of a heterodox monastic order and in the enunciation of Hindu doctrines. Simplistically speaking, it foretold of an impending catastrophic end of this world and final destruction of the 'Kaliyug' in the very near future. The existing time was declared to be an interim period when human beings were to radically purify themselves to be reborn in the 'satyug' as enlightened souls. Purification therefore was the basic tenet of the sect.

Central to the concept of purity was 'brahmacharya' (celibacy), which in fact emerged as the core doctrine of the sect and was the strongest and most inclusive value of the Brahma Kumaris.' The Brahma Kumaris made a direct connection between sexuality and fall of the world. According to them transition from satyug to kaliyug occurs when sexual intercourse becomes part of the human scene. With intercourse arises the body consciousness – the root of all other human evils and the primary cause of present miseries. This was a situation which came suspiciously close to that of Christianity, as sexuality or sexual

in Hinduism.

In Christianity virginity was ranked higher than married life and it is only relatively late in the early history of Christianity thought that marriage came to be considered a sacrament. Moreover, the concept of 'original sin' also comes closer to the Brahma Kumari thought than the Hindu concept of 'pap' (sin) which is a much wider category embracing hordes of sins. For this 'original sin' women were held responsible and were accepted by the Brahma Kumaris as the source of all sexual lust. Therefore, the onus was on women to rise above their inherent sexual selves to stem the downward slide. Male sexuality on the other hand was not primarily implicated, but it was certainly considered a contributor to the moral decline of the world. The only answer to this decline was the practice of celibacy.

The concept of celibacy has a particular rooting in Indian cosmology and culture. It belongs to the mainstream tradition of sages and ascetics who practised and preached celibacy as a pre-condition to the achievement of self-realisation. It was also a prerequiste to the monastic order of Buddhism and Jainism. Both male and female ascetics renounced their sexuality along with and as a part of the renunciation of their reproductive and productive activities. The Hindu tradition which essentially applied to males, emphasised the control of sexuality or more accurately that of semen, and equated its conservation to 'shakti' or energy and empowerment. It is this empowerment concept of brahmacharya which operates among the male wrestlers of north India in the context of body discipline.4 Gandhi, a contemporary of Lekhraj, was the one who applied Brahmacharya on a widescale both for males and females.5 He used brahmacharya as a personal and political means of conserving energy and transforming it into power. Gandhi's theory of controlled sexuality was integrally connected with his search for shakti and national regeneration as a part of his theory of politics.6

Instead of shakti, Brahma Kumari sect emphasised purity. There was no equivalent in the Brahma Kumari sect of the Hindu belief, also accepted by Gandhi, that sexual self-control (withholding of semen by men), itself was energising. Instead, the brahmacharya of the Brahma Kumaris was primarily located in the Hindu concept of purity and pollution. Brahma Kumaris considered sex as dirty, demeaning and poisonous, indulging in it was like carrying a "basket of filth" on one's head; intercourse was compared to wallowing in "sewer".7 Except in her pre-pubertal state a woman was considered to be highly polluting. Celibacy therefore meant renunciation of sexual activity which was the basis of her polition, signified in ner marriage and children, which bound her to this world and created a position of inferiority as compared to the 'devi status' in her pre-pubertal manifestation.\* This purification alone allowed her to follow a course of enlightenment and spiritual salvation. Brahmacharya in the Brahma Kumari sect was therefore part of her cleansing process from pollution to purity to enable her to realise her spiritual self.9

This concept of celibacy with its overwhelming onus on women was to create an immediate impact upon the Sindh Hindus. And the Om Mandli was met with a most enthusiastic reception specially from the Bhaiband community of rich merchant class. In fact, in a very brief span of time Om Mandi came to have fairly noticeable female following estimated to be around 300 at the time. All these females had the express sanction of their families who were known to have encouraged them to join the sect. They were in fact admitted into the sect only after procuring written permission from their father or father-in-law, or husband or any other male member of the family who held the position of a guardian.10 The family members (specially mothers were greatly supportive of this move), took the decision on behalf of minor daughters or other females to join the sect. Interestingly, the male followers, although wholly insignificant in number, were never asked to procure any such permission. Moreover, unlike the females they were interviewed extensively and 'tried out' before they were admitted inside the sect.11

Quite clearly, the female exclusivity of the sect was preferred. The female following was also not confined to the middle aged or the old or primarily widows, who are known to provide the principal constituency of such sects and 'gurus'.12 It was drawn overwhelmingly from among the youthful; both married and unmarried as well as young widows.13 There were also a whole lot of 'very young impressionable girls', according to Dadi Manohar Indira and Dadi Nirmal Shanti (two of the oldest Brahma Kumaris who joined the sect in its formative years), who initially came with their mothers and were allowed to stay put in the sect itself. These minor girls with their ages ranging from six to fourteen provided, according to the Dadis, 'the loundations' of the sect.14 Their growing numbers necessitated the opening up of a boarding school in Hyderabad.

The following of the sect came to consist of two kinds: the lay and the fully surrendered. Both took vow of celibacy as this was the basic doctrine of the sect. The lay members continued to live with their 'worldly' families but participated in all the activities of the mandli. The surrendered ones were those

who left their family life to reside in the mandli itself. The separate number of these two categories of followers cannot be estimated but the fully surrendered formed the real core of the sect. Initially it comprised of the immediate family females of the founder along with a few young unmarried girls in their teens. The bulk of them however was formed, as indicated above, by the young female children who had been made over to the sect by their families.

In fact, within a couple of months of setting up the mandli, in October 1937 Lekhraj created an all women managing committee of the Om Mandli, comprising of his earliest disciples. It included his daughter-in-law Radhika, later known as Brijindraji; a young girl named Gopi, later known as Dadi Man Mohini, who came to occupy Brahma Kumari's chief administrator's post; a 16-year-old girl Rama, now known as Dadi Prakshmani, who runs the Brahma Kumari organisation at Mount Abu. 15 In keeping with the youthful character of its followers and this committee, Lekhrai appointed a young unmarried girl of 20 years of age called Radha, renamed Om Radhe, who later came to be known as Jagdamba Saraswati, to head this committee As the head, although a nominal one, it was she who gave the formal permission to female aspirants who wished to join the sect. This permission sought in the name of Om Radhe read: "we give permission to our daughter willingly that she may come to Om Mandli to drink the water of knowledge from Om Radhe, and for her to donate that nectar to others also".16

The sect had obviously created a 'space' for females. This space did not go uncontested and unchallenged as I shall discuss later, yet it accounted for its immediate popularity, for it was carved out of the widely perceived religio-political and social requirements of colonial Sindh.

#### II Syncretic Tradition: Breaches and New Emphasis

Religio-politically, the sect was given shape at a time when the bid for separate identities and growing communalisation of Sindh were at its height. The deeply rooted syncretic tradition of Sindh, where beliefs and rituals were shared by Hindus and Muslims alike, stood seriously threatened. Popularly known as the "land of pirs" some 1,25,000 "saints" were said to be buried here. Both Hindus and Muslims of Sindh shared for centuries the worship of pirs and holy spots which had mosques and temples built side by side. The pirs also had both Hindu and Muslim names. For example, Jinda pir was Khwaia Khizr, Udero Lal was Sheikh Tahir, pir Mungho was

#### Muggar pir, Raja Bharthari was Lal Shahbaj Qalandar.<sup>17</sup>

Yet, Sindh could not escape the growing community consciousness which several parts of India were experiencing in the 1920s. By 1930s, Sindh was a fertile field for various reformist activities ranging from that of the Singh sabha, Brahmo samaj, Arya samaj, shuddi movement, Tabligh movement, Ahmedias, theosophists and Mira movement. Thirties in Sindh were also witness to frequent Hindu-Muslim clashes and their exclusive claims to different places of worship. The growing resentment of sections of Sindh Muslims against Hindu moneylenders led to severe outburst of reprisals and confrontations.

These were also the years when the demand for a separate Sindh state was raised. <sup>20</sup> Hindus fearing a Muslim majority state which would play havoc with their numerical strength without the prop given by Bombay Hindus, resisted it. The demand was conceded by the British in the Round Table Conference 1932, and was given shape under the 1935 Act which took effect in 1937. This was also the year in which Om Mandli was born.

The genesis of Om Mandli has therefore to be located in the socio-political vulnerability felt by the Sindh Hindus at a time when there was a breach in the syncretic culture of Sindh showing greater community self-awareness and emphasis, as also the sharpening of communal divides. In this not merely the Hindus and Muslims, but also the growing numbers of Guru Nanak followers who belonged to different tradition within the pluralist framework of the Sikh faith, played a part.

The Guru Nanak followers in Sindh were mostly Nanak Panthis. According to the 1911 Census, the majority of them were lohana by caste.21 Yet, their religious identities were fluid and equivocal and they frequently returned themselves in the census, as Hindus. However, due to social and cultural factors unleashed by the colonial government along with the work of the Singh sabha (a wide ranging religious movement, activated in the closing decades of the 19th century). a 'Sikh identity', purged of the great diversity in Sikh tradition had begun to be formed.22 This was brought to a head in 1931, when the census authorities insisted upon statistical tabulation based upon separate religious identities and a clear distinction was made between the Hindus and Guru Nanak followers.23 This strengthened the existing perception that there were steady inroads into the strength of the Sindh Hindus and that Hinduism was in danger of being encroached upon from different

It is in the perceived threatened position of Sindh Hindus, who never had very strong brahmanical religious influence,<sup>24</sup> being far

away form the centres of brahmanical orthodoxy, that the emphasis of this sect (as shown later), on certain identifiable aspects of Hinduism and 'Hindu' identity specially for its female followers, has to be located. Moreover, women were considered more vulnerable to outside influences. In Sindh they were the greatest followers of the pir cult, which catered to their emotional and physical requirements stretching from quarrels in the family to curing ill-health and barrenness. The folk-tales of Sindh are replete with amorous Hindu women who were enamoured of the Muslim saints and wanted to run away with them.<sup>25</sup>

In fact, not only in following the pir cult but also in their sartorial habits, there was nothing to distinguish between a Muslim and a Hindu woman of upper caste and class. The Sindh Hindu women in the 1930s were given to wearing very loose payjamas with a short blouse on top and had their faces veiled. This regional variation was shared by Muslim and Hindu elites.

One of the first visible changes towards 'Hinduism' that the founder of the sect introduced was a dress-code for the sect's female followers which could effectively establish their Hindu identity as opposed to the one shared with Muslims. Lekhraj who was a regular visitor to Calcutta in connection with his jewellery business was aware of the changes that had taken place in the sartorial habits of the 'bhadramahila' (Bengali middle class gentle-woman). His close contact made him realise that sari and blouse worn by them was a distinguishing mark depicting 'national cultural identity' which in fact was a predominantly Hindu one.27 This sartorial change was introduced for all the female followers of Om Mandali in preference to their traditional dress. Even the 'ghunghat' (veil) was not retained.

Significantly, this was also the dress in which the Hindu goddesses were visualised. Raja Ravi Verma's paintings and oleographs had played the most significant role in popularising this imagery. Even now no other dress except the sari and blouse can be worn by the Brahma Kumaris. A more recent innovation however seems to be the wearing of a long undergarment beneath the full sleeved blouse which covers the midriff, otherwise exposed to the view. In the oppressive heat of summer, this extra garment obviously becomes very uncomfortable. When I inquired about the possibilities of a convenient change of dress to a more comfortable and loose 'salwar kameez' I elicited a shocked response from a Brahma Kumari. I was informed that it was the sari blouse, the dress worn by the goddesses, and not salwar kameez that they would be wearing in the coming satyug.

For this dress code, the adoption of the colour white although clearly in emulation

of the Jain 'sadhvis' is not without significance. Adopted in preference to the acknowledged saffron of the renouncer, the emphasis seem to be on celibacy, purity and control, a rather than on renunciation, a point which I shall elaborate later on. This choice was to arouse criticism as wearing of white remains traditionally associated with widows. However, as the Hindu widows in Sindh were generally known to wear red with black print, but this criticism assumes the form of a veiled attack on certain aspects of the sect which, although not articulated openly, were causing great offence.

Criticism not withstanding, the change of dress not only established an outward visibility of 'Hindu women', it also gave their collective presence in the city of Hyderabad a visual impact far greater than their numbers.

# III Sindh Society: The Caste/Class Structures

The number of Hindu women or indeed that of the Hindus in Sindh was not very significant as they formed a very small portion of the total Sindh population. In Hyderabad, however, where the sect was founded, Hindus were more concentrated, constituting nearly 30 per cent. Among these Hindus also it, was the lohana caste cluster constituting 47.12 per cent, which provided the social base of this sect. 40

The derivation of lohana caste is somewhat obscure. The colonial administration classified them under the trading caste of the banias. They themselves traced their origin from the kshatriya lineage. Whatever their grouping in the traditional caste hierarchy, they were professionally primarily a business community. 11

Among the lohanas, the two major groups were those of amil and bhaiband. It was from the latter, the larger group, that this sect's followers were primarily drawn, thus making this sect both class and caste based. The amils were the hereditary caste group of government servants who through their ability had established themselves as indispensable class of administrators to the Muslim rulers and had gradually entered all state departments as clerks and officers.32 Bhaiband community was the leading community of lohang traders who rose from the position of hawkers of various goods. The earliest trading articles they dealt in were the Sindh arts and crafts like calico prints, embroidery, specially in silk and gold threads, inlaid work in silver and gold. lacquer-ware, glazed pottery, etc., for which Hyderabad was rich. Since these artefacts were also known as 'Sindh Works', this subgroup of lohanas also came be known is 'Sindh Workis'.

In the colonial period, the Sindh Workis carried their wares to the European habitation centres and were known to make heavy sale and enormous profit. Their trading network outside India which were expanding rapidly during this time, ensured them huge profits. It is this network which gave rise to the popular saying that a Sindhi is found anywhere in the world, even in the remotest corner.

Lohanas however did not remain confined to trading alone. They invested heavily in moneylending and landownership. 35 As a caste group they formed a sizeable number of landowners among the Hindus of Sindh who unitedly contributed 40 per cent of Sindh's land revenue. They were also major contributors to Sindh's export trade in foodgrains. This export trade formed a much larger proportion of total agricultural output in Sindh than of most other parts of India. 7 With the result that when the world market collapsed in 1930s, they were much harder hit, specially as the public irrigation system was opened in Sindh only in 1932. The enormous fall in prices in the wake of depression created a slump in the market affecting all trading activities. 48 The recovery of Sindh was slow and the market slump took a lot longer to lift in this region. Consequently, in the late 1930s, the earlier growing prosperity of this otherwise upwardly mobile group of lohanas was still constricted and hazardous.19 This fact substantially added to the socio-political crisis they were facing in Sindh.

In such a crisis, women became the primary focus of interest and attention, as the maintenance of status and rank remained associated with them. Symbolic of this erisis was the abduction of Hindu women (and children) for the purposes of forcible conversion from late 1920s onwards.40 This reinforced the extreme vulnerability felt by the lohanas. Their declining position made them conscious not to slide into a lower rank, which seemed inevitable in relation to their females, specially in case of their marriage into a lower status group in this prolonged crisis period. Safeguarding of females, their virtue and chastity, therefore, not merely created a great anxiety among lohanas, it also assumed an urgency at this time as they became a crucial index of signifying the distinction between upper and lower class

Structurally, Iohana's social system divided them into various sections and made them extremely status conscious. Like certain other high status and aspiring groups, specially in north and north-east India, Iohanas followed hypergamy which came closest to the kind existing among the patidars of rural Gujarat, as described by David Pocock. 41 Hypergamous classification in the caste, severely affects the marriage relations.

For example, amil lohanas who formed a hypergamous subdivision of the caste, would take brides from but would not give brides to other lohanas. The result was that while amil parents were in position to stipulate for a substantial dowry with the bride selected for their sons, they found the bestowal of their daughters increasingly difficult and expensive. Expectedly, therefore, when a bhaiband wanted his daughter to make an hypergamous alliance by marrying into an amil family, he had to pay very substantial dowry.

Moreover Sindh was further traditionally divided into three parts.43 The cultural differences among the people of these regions in habits, manners, custom, dress and even the dialect were varied. These distinct regions determined the limits within which marriages were normally contracted. This also meant that there was a classification and creation of various strata of places and people with who and where marriage could not be contracted without losing one's status. Another such criterion established was in the urban and rural areas as well as between Hyderabad due to its hallowed position and elsewhere: Hyderabadi lohanas would not contract marriage with outside lohanas, notwithstanding their status category. Hyderabad therefore possessed even town endogamy.

Town life was perceived to be more comfortable and civilised. Its inhabitants therefore did not like to marry their daughters in villages. A resolution of the panchayat of 52 villages passed in 1886 reveals the extent of limitation on selection of matches created by the difference between village and town life.

We the panchayat of this Pargana (social district Nawab Shah) have resolved that no person shall contract marriage with a person of the town of Halani, Bhilani, Kandiaro, Noshahro, Bhina, Tharushah, Dabhro, Ranipur, Gaubat, Khairpur, and Lukman, as the people of above town felt it contemptuous to give their daughters to the people of villages.<sup>44</sup>

This was undoubtedly a move to repudiate inferiority associated with villages by withdrawing from an asymmetrical exchange which defined them as inferior, same as the lower rung of Rajputs of Kangra were attempting between 1930 and 1955.45

# IV Marriage Patterns: Class and Caste

All these considerations and social restrictions not only made marriage difficult to arrange, they also had a direct bearing upon the dowry system which came to acquire elephantine proportions. Dowry was not merely a single transaction at the time of wedding, but embraced pre-marriage,

marriage and post-marriage transactions. Many people paid cash equivalent to avoid payment in kind. The highest amount in money equivalent was considered to be Rs.20,000 in 1930s. The rough estimates put it higher as "rates of different grooms, according to their profession and socioeconomic status were fixed. Moreover, the number of ornaments given in dowry indicated the status of different families.

In fact, during the colonial period, lohanas (both amils and bhaibands) came to be classified according to 'Pahrani', which denoted a particular standard of dowry adopted by a particular family.48 A specific amount was prescribed by each village for single Pahrani and a family of the standard of three Pahrani paid by way of dowry thrice the amount paid for one Pahrani. The society was divided into classes of 3, 5 and 7 or double: 14 Pahrani; and each section generally contracted marriages with a section of its own standard. The practice of Pahrani not merely showed the institutionalisation of dowry but also an attempt to control it through imposing certain norms for dowry.

Among the lower strata of lohanas, marriage by exchange was common. However, once a family adopted a form of marriage by exchange, it was considered a family of low status and stamped with degradation which would take quite a few generations to pass off. Other families among lower classes of lohana as well as other castes, who had no girls to give in exchange, generally resorted to marriage by purchase even from non-Sindhi families.<sup>51</sup>

The result of this whole system was that the wealthier sections ultimately were unable to find hypergamous matches for their daughters and showed a scarcity of 'desirable' groom but a bride surplus. The lower classes, on the other hand found it difficult to procure girls. They resorted to marriage by exchange or purchase and showed growing scarcity of girls. Most folk-tales of Sindh depicted the low class/caste situation in which the marriageable girls were few and it was considered an achievement to win over a girl in marriage. In terms of actual numbers also the female population among the Hindus of Hyderabad fell far below the total number

of male population:89,078 females to 1,09,606 males.<sup>53</sup>

Consequently, among lower class lohanas in many villages, males remained unmarried owing to wide prevalence of hypergamy and scarcity and purchase of women. Similarly, females from upper classes due to hypergamy and demands of dowry were finding it more and more difficult to marry at all. They either married at a very advanced age or remained unmarried.54 These two 'trends' which became glaringly noticeable among the lohanas during the colonial period, however, appeared to have been established much earlier during the 16th-17th centuries. 55 For when a caste was divided into sections of different status, the parents were obliged to marry their daughters into an equal and higher section. If they married her beneath themselves they were reduced to the status of the section in which their daughter married.

The situation among the lohanas was aggravated by the number of females which overwhelmed that of males (unlike in the total Hindu population): out of a total population of 93,625 lohanas in Hyderabad, there were 46,171 males and 47,454 females. This fact also reinforced for females an unmarried status or at best a very late marriage. Although total number of such females cannot be estimated, the interviews revealed the existence of unmarried daughters who were a constant source of worry to their parents. It

The number of such single women was increased by the existence of widows in the family, whose number again cannot be ascertained. The lifestyle of Sindh Workis constantly travelling to different lands and exposure to all sorts of climates and diseases, not infrequently, proved fatal leaving widows of different ages. Widow remarriage as an institution did not exist among the twice born castes of which lohanas were a part and very rare instances aroused caste indignation and a lowering of status. However, in lower castes, it was a common custom for the widow to marry her deceased husband's younger brother or even an elder brother. <sup>18</sup>

# V Female Sexuality: Folklore, Myth and Control

Unlike the lower caste groups, among the lohana bhaiband community, the lot of women left behind by their migrating male members for considerable periods of time in pursuit of trade and business, spoke for a very repressive system in which female movements were greatly restricted outside the home. Such male migration left their households either headed by old parents or just the old matriarch. Female hierarchy and a close control led to frequent domestic quarrels among women themselves creating

the stereotype of a Sindhi woman who quarrelled all the time. The innumerable stories of mother-in-law and daughter-inlaw quarrels are also common, though not exclusive to this region.

High caste and class seclusion of woman in conjunction with migrating males of a joint family placed a more pronounced emphasis on female sexuality and the need to guard it. Women who had to be controlled sexually were not merely the wives but also daughters whose virginity had to be guarded The latter assumed an urgency in view of their advancing ages and late marriages or no marriages at all. Significantly, the betrothal of girls was at 6 or 7 years of age and marriage at 12 or at the on set of puberty. " Therefore, once a girl crossed puberty, she was already considered in an advanced age group. The following of the sect among the mid-teen unmarried girls, as given above, is therefore very significant.

It is to be noted that the question of sexuality of high caste/class females assumed an entirely different form among the lower classes and castes; which may explain why the sect's popularity remained limited to the upper classes only. This was despite the fact that these groups shared with the lohana caste group a high degree of male migration outside Sindh in connection with trade and business activities. In fact, the ever growing business of the lohanas had meant employment of managers, clerks and even ordinary servants from among the Sindh Hindus of lower castes and classes, who were recruited from all over Sindh. Talking about them, R Huges Thomas wrote in 1855:

... it is not unusual for a husband to return back after a long sojourn in foreign lands and find his wife with a small family of her own. The offended party, however, seldom allows these incidents to interfere with the domestic tie.<sup>60</sup>

Instances of this kind also existed in colonial Haryana, among the peasant and lower castes, where the essential productive and reproductive role of women had assured them a liberal sexual climate. But among the upper caste and class lohanas of Sindh, where women's productive functions were not important, the universally important reproductive functions had to remain licit and of socially recognised father.

In Sindh therefore lohana women's noninvolvement in any productive process (except home) put a great deal of pressure upon her reproductive functions. The social pattern of three years absentee husband who came back for six months only, meant that women must be able to perform her reproductive role within this period: she must conceive during this time or a barren three years period would follow. Moreover, the fact that this conception must be of a son became an overriding concern in the society as girls in this socio-economic milieu were a burdensome presence in more than one way.

These pressures and demands upon a woman's reproductive functions, only increased the suspicions regarding her sexuality. The insecurities of migrant males had reinforced a familiar stereotype of a sexually starved woman out to satiate herself at the first opportunity. This inherent fear of female sexuality, not exclusive to Sindh, was nevertheless enhanced manifold in the social milieu of absentee husband/male in colonial Sindh.

This sexually promiscuous woman who could not be controlled was also reflected in the mythical folklore surrounding the popular cult of pirs. For example the myth surrounding Lal Shahbaz Qalandar, the foremost pir, worshipped by Sindh Hindus reflected and strengthened this belief greatly.

Lal Shahbaz Qalandar was in fact the first important sufi saint in Sindh to be worshipped. Along with Jhooley Lal, he was the most revered pir for the Hindus of Sindh. Known as Mast Qalandar he was born pir Usman Shah in Marwand in Atghanistan in 1143 and later on came and settled down in Sehwan in Sindh. The Hindus of Sindh regarded him as the incarnation of Bharthari, the saintly brother of king Vikramaditya who is believed to have worshipped Lord Siva

The story of Raja Bharathan is widespread in the whole of northern India and forms a part of the stories included in Simhasan Battisi and Baital Pachisi, which recount stories of Raja Vikramaditya of Ujjain. This story forms a part of the general theme of stories dealing with 'triya charitra' (women's wiles) and goes back both to the folklore as well as the Indian narrative literature.

There are two popular versions of the story, both of which show deceit and treachery of the wife. In one version, Raja Bharthari gives the fruit of immortality to his wife Pingala. The wife gives it to her lover. The lover gives it to a prostitute of whom he was enamoured. The prostitute hoping for a big reward gives it to the king. Bharthari then renounces the world and becomes a 'sadhu' (mendicant) leaving his kingdom to his brother Vikramaditya.<sup>63</sup>

The more popular version of the two shows Bharthari to be away and in his absence his brother Vikramaditya observes his sister-inlaw (Bharthari's wife) in the embrace of another man The wife in self-defence accuses Vikramaditya of sexually assaulting her. Bharthari expels him. Later through a strange set of circumstances Bharthari discovers her infidelity. He calls back Vikramaditya who forgives his elder brother's wife Bharthari however renounces his kingdom and becomes a sadhu.<sup>64</sup>

organised. Existence of this power structure has blurred the distinction between the 'worldly' and the 'spiritual family' even more. A recreation of this power hierarchy has meant a greater surveillance and control over younger female adherents, not necessarily in matters of spiritual growth, but essentially in sexual ones, as celibacy remains a pre-requisite to spiritual growth.

#### VII Use of Hindu Imagery: Resultant Tension

In the colonial period, the attempt to sublimate female sexuality proved problematic. The sect in a bid to resolve this sexual tension carried it inside, only to be condemned and prosecuted for it later on. This contradiction between the need and attempt to control female sexuality has to be understood in the socio-cultural traditions it drew upon, with its diversity of conflicting symbols and meanings. These could be interpreted in a variety of ways and therefore contested.

The sect used the Hindu mythological symbolism and imagery in a most revealing way which highlights the contradictions of this society in dealing with matters sexual. The sect emphasised Hinduism by adopting the Hindu triad of Brahma, Vishnu and Siva, however with a significant difference. There was an amalgam of the three gods into the person of the founder. Brahma was identified with Lekhraj to the extent that he was called 'Brahma Baba'. Like Brahma, who in Hindu mythology created the world, so did Lekhraj. His followers called Brahma Kumaris and Brahma Kumars were reborn through the knowledge he enunciated. Vishnu in Lekhraj's vision had already announced himself as identical with Lekhraj. Moreover, as mentioned earlier, it was Lekhraj who was to be reborn as Vishnu in the satyug. Finally, the visual manifestation of the founder was an illuminated Siva-'lingam'.85

Approach to these theological symbolism was through 'bhakti' or devotion. A throw back to the medieval period, bhakti stressed the emotional and personal worship of Krishna to achieve complete union with the divinity, through unconditional surrender, which was sexually symbolic. Brahma Kumaris, in keeping with the 'raslila' tradition of bhakti, engaged in ecstatic dances and songs. Based upon voluntary self-denial and renunciation of one's sexuality, it elicited a kind of cathartic bhakti exemplified by loud singing and dancing in which Brahma Kumaris were but 'gopikas' in the bhakti tradition of northern India, who established an idealised relationship with the divine other by an orgasmic shaking of the body. In this raslila it was Vishnu in his Krishna avtar (incarnation) who was the focal point of devotion. Yet in the Brahma Kumari sect, it was Lekhraj who personified Krishna. See Even in popular memory, it was Lekhraj who performed raslila with himself as Krishna and the Brahma Kumaris as gopikas. See Significantly, Lekhraj, in keeping with the other male bhakts did not constitute his body as a feminine one, see but retained a masculine one. He was clearly not acting from the position of a devotee but had got elevated to personify the god himself.

This identification was to create enormous problems for the sect. In its symbolic celebration of non-marital sexual relationship, the two roles of the father and lover got assimilated into one. Symbolically, the object of bhakti was attainment of union with the deity/lover. Yet with Brahma Kumaris this place was appropriated by the pita (father). The father transgressed and became the lover. This at once took on a strong Freudian overtone as the female bhaktins were assimilated into the sect symbolically with a figure representing both her father as well as her lover. This was a clear transgressive notion of the sexual avoidance and acceptance role patterns and relationships. The explicit centrality of these two roles as one did not translate into benign and protective presence but rather of a menacing sexuality of essentially humankind.

So what was for the sect, a way to Hinduisation of the 'masti' of the pir Mast Qalandar<sup>89</sup> by drawing on bhakti tradition and an attempt at channelising sexual energy from the physical to the symbolic level (through raslila), became in the lay eyes, an overt display of sexuality and therefore a very potent reason for its opposition. Moreover, the upper class north Indian society, despite a strong tradition of bhakti, had remained suspicious of ecstatic dances and singing which in their minds remained associated with degenerate practice and with low castes. 40 Understandably, therefore the raslila invited a lot of public flak and censure. Consequently this aspect of bhakti had to be given up by the Brahma Kumaris. And once the sect shifted to other parts of post-independent India, the raslilas were no longer heard of. The Brahma Kumaris (except the Dadis) now firmly deny that raslilas ever took place or were an intrinsic part of their bhakti observance in the colonial past.

Apart from the raslila, iconographically, the yogic concentration point of the sect was the lingam, showing a sexual symbol of their birth that was not only the progenitor of the daughters but also the ultimate unifier. These two were mutually interacting images which portrayed the ambivalence of the sect, unable to successfully project a solution to the control of female sexuality.

In the hierarchy of the three gods: Brahma, Vishnu and Siva, it was Siva who was placed at the apex, specially as Siva was the most important deity among the Hindus of Sindh.

Although, Siva is certainly the divine archetype of the sexual renouncer, the ascetic among the gods, he also imbibes in himself the two extremes: ascetism and eroticism. This focus again created a kind of amophorous understanding of the core revered deity, thus opening the sect to varied implications specially those concerned with sexuality.

In fact, the sexual motif of the sect along with its central doctrine of celibacy emerges particularly strong. Located as it was in the socio-mythical context in which women were accepted as sexually promiscuous, the exercise of self-control under the authority of a 'three-in-one' father became highly suspect. The ambiguity of the sect contributed largely towards this perception which was greatly strengthened by freely circulating rumours centring upon licentious living inside the 'ashram'. 92 These rumours signify the perception of the sect registered at the popular consciousness, which may or may not have a relationship with the reality of its existence, ideology and belief system." Nevertheless, the image of the sect which percolated down contributed substantially to the opposition of the sect which mounted even as its membership arose.

# VIII Growing Opposition: Contradictions in the Sect

Underlying the perceived sexual overtones of the sect, which provided the major thrust of opposition against it, were other socioreligious contradictions. For instance a restraint of sexuality could be valorised only in a morally acceptable structure. In order to create this structure the sect attempted to reconcile two separate and somewhat contradictory worlds: world of the householder and that of the renouncer. The heterodox tradition of ascetics which the founder had adopted for his sect, posited the householder as opposed to the renouncer. In these ascetic sects the renunciation was essentially a negative state constituting an anti-structure to life-in-the world.44 The renouncer, renounced both his productive and reproductive activities, which led him to be truly independent of the familial/social ties and structure and separate him from his opposite, the householder.

The Brahma Kumari sect, while adopting the former did not entirely negate the latter. As a 'true family' outside the family, it did not reproduce the totality of a monastic order and thus assumed a threatening rather than a non-threatening presence. For instance, although the followers renounced their natural families, sexuality, reproductive and productive roles for the 'true family' of Brahma Kumaris, they retained an inexplicable attachment to their material assets

available as jewellery or property or other forms of wealth which they possessed as 'stridhan'. According to the Hindu law operating in Sindh (Bombay Presidency), Stridhan was an absolute estate and as an absolute owner, a woman could dispose it of as she liked.95 The instances of women having gone over to the mandli with all their jewellery, \*\* showed a materialist contradiction in the otherwise spiritually ordained ascetic sect. Significantly, the high class Hindu women of Sindh, both married and unmarried, were as a rule kept loaded with jewellery.97 This had not only acted as a status symbol, but in the case of married ones, as a compensatory gesture of the migratory husband.

There were also widows who having joined the mandli were demanding a division of property to claim their share.94 In colonial Sindh, a widow who succeeded to her deceased husband's estate (in the absence of a son, a son's son, a son's son's son), had the right to claim a partition of the joint family property. However legally she was barred from making over this property, known as the widows estate, which was essentially a limited estate, over to the sect. Alienation of property specifically for religious purposes was specially allowed only in relation to the performance of essential and obligatory ceremonies of the deceased owner or to conduct his spiritual welfare. There could be no alienation of property for a widow's sole spiritual benefit or as a gift to her guru. 44 But she could, certainly make over the income of her estate to the sect; she had full legal right on it.

This self-assertion of some females in financial matters created a great deal of tension and strife for their family members, specially as the sect placed the female followers outside the controlling hand of the family. Consequently, Lekhraj was approached by the affected families to remedy matters relating to assets and property, but he refused to intervene in what, he declared, was an entirely private matter. (10) It was seen as the failure of the sect to honour the ethical code of ascetics. Opposition gathered strength as the financial demands were put down to the influence of the mandli itself, which was to be the benefactor.

These financial contributions to the sect were direly needed as the housing, clothing, feeding of the growing number of followers of the sect demanded more and more money. Lekhraj, although a rich man, had stopped his lucrative business in jewellery to devote himself full time to the sect. There was also no other source of income. The sustenance came from the contributions of the followers' families. The rich bhaiband community was well known to set aside a certain percentage of their business profits for purposes of charity <sup>101</sup> The donations through 'gupt daan'

(secret charity) are openly acknowledged by the Brahma Kumari even now. A large number of rich Sindh families are known to contribute considerable amount of money to the sect, in keeping with the tradition of giving daan, maintained conspicuously by the trading/commercial and business communities of India. 102

I was however, informed that the real source of the sect's financial asset comes from the contribution of the lay members which merely amounts to 10 paise to one rupee per month. Collectively this is claimed to run into lakhs of rupees. According to Lawrence Babb, financial contribution also comes from the Brahma Kumaris who join the sect along with the 'equivalent of their dowries'.103 This dowry can be assumed to be a financial contribution which a natal family can afford to make rather than the market demands of dowry satisfied by the bride-givers. Although some financial contribution from the followers or her family are expected and accepted, it is not clear whether those families who make over their girls to the sect in their childhood also make some financial contribution, or any contribution, if at all. This aspect involves unravelling the internal structure of the sect specially from an insiders point of view, which I was unable to penetrate. This view may very well remain elusive given the high secrecy of the sect on matters relating to its structural existence.

Although, no satisfactory answers to the ostensible wealth of the sect may be found, what is obvious is that a lot of it went into providing a very comfortable living to its inmates.104 In the spiritually ordained supposedly a-social world, these inmates were not exactly living an austere lifestyle. To the joyous life of singing and dancing was added the attractions of a sumptuous cuisine which had become the talk of Hyderabad. 105 Interestingly, these sumptuous meals, which are retained still, have become an asset which attracts rather than repels the potential followers and their families specially among the lower middle class the major recruiting constituency of the sect now.

In the late 1930s however, the opposition to the sect kept on mounting. Most violent reaction came from the side of the husbands whose young wives had been given permission in their absence to join the mandli, or attend its 'satsang' as lay followers. A great deal of noise was made that under the influence of the sect and its doctrine of celibacy, those wives were refusing to have sexual intercourse with the husbands. Clearly, the concept of celibacy was welcome for the unmarried and widows but not for the married, whose sexuality needed to be controlled and withheld but not from the legitimate consumers. In the stubborn cases

this resulted in women being turned out of the house by their husbands and/or the husbands eventually remarrying One husband was also known to have instituted a law suit for the restitution of conjugal rights. The official biography tends to valorise such cases where women refused to go back to their husbands. 10h This was clearly done as an ode to the sect itself, as the account remains ambiguous on the fate of such women. The refusal of women. whatever their number, certainly indicated an active agency stipulated among them. From pliant consenters, who came into the sect through the permission of their male guardians, the self-assertion and self-control surfaced at least among some of its members.

Cases relating to the widows and unmarried females are far more clear and unequivocal. There was no such vociferous opposition from the families of the widows or unmarried females which was officially recorded. A few voices raised in relation to the latter were declared to be due to the pressure exercised by the opponents of the sect. Some of the minor girls as a result, were recalled by their families, but later sent back. <sup>107</sup> Other families refused to oblige or get pressurised. They were consequently threatened with social boycott, but without any success.

The community pressure however kept on building up. 10x The opposition ultimately galvanised in an anti-Om mandli committee. This was followed by a direct controntation between the mandli and anti-mandli followers. Picketing of the mandli followers was affected; the building housing the organisation was put to fire; media was roped in to denounce the mandli activities; local newspapers like the Sindh Observer wrote critically against the mandli and its founder.

When the situation got out of control, Lekhraj decided to shift the mandli headquarters from Hyderabad to Karachi, where he purchased five bunglows to house his followers. The opposition to the sect continued in Karachi but in an apparently abated form, as neither was the concentration of Hindus nor their articulation as strong as in Hyderabad. Moreover, the whole issue was overtaken by events which were throwing up socio-political convulsions. In fact, not much is known of the sect after its shiftage to Karachi except that the low keyed mandli kept on expanding slowly, although Karachi itself was left untouched. It was Hyderabad which remained its recruitment base as Lekhraj adopted the practice of sending his most committed and trusted Brahma Kumaris back to their home town and even to their own families to make fresh recruits. Even structurally therefore, the break of the sect has never been complete with the lay world The sect remained in Karachi even after the partition. It was only in 1950 that they came to India to make its headquarters in Mount Abu, Rajasthan.

#### IX **Contemporary Concerns:** A Continuing Relevance

Mount Abu showed an entirely different soil and society. In fact, there was no replicating of the Sindh society anywhere in India. The Sindh diaspora had removed the major constituency of the Brahma Kumari sect. This realisation compelled a change in emphasis of the sect's preaching and stand. The three years that the sect had remained in Sindh after the partition had introduced a new dimension in the sect. This sect, selfconfessedly born in opposition to the effects of westernisation, Islam and Christianity, which had 'corrupted Hindu way of life', 109 came to incorporate the 'Paigambar' in the fold of divine beings. 110 Religious differences and guards were being obliterated. Once the sect was in India, yet greater accommodation became visible with the inclusion of Christ within the fold of the sect. So much so that designation of each year, carmarked for celebration represents different religions. For example, 1994 was designated as the year of 'the angel' or the 'farishta'."

More importantly, the oft-repeated phrase, 'samay ki mang' came to possess different connotations: the Brahma Kumari sect started to be projected as an answer to the problem of a run away population and that of ensuring the much needed peace in the world through sexual self-restraint and concept of brotherhood. This new orientation of the sect neatly dovetailed with the national and international concerns. The projection of world peace in the aftermath of second world war holocaust, the traumatic partition of India and the onset of the cold war situation, was self-evident. The population control similarly was a dire need. Indeed, it was on the national agenda of an independent India. A population which ate up resources and outstripped any national growth rate was seen as destablilising Indian society and polity. Anxiety about population explosion, specially in the third world consuming earth's limited resources and creating a world crisis, soon assumed an international dimension. In such a situation, the Brahma Kumari sect not merely projected this concern but also a strategy of population control through a control of female sexuality; a strategy which echoed the onus put on women in all the national and international population control programmes and planning. This shiftage of emphasis has proved highly beneficial to the spread of this sect and its internationalisation which began in 1971.112 Currently it is reported to have more than 300 centres abroad in Hong Kong, Japan, the UK, Germany, Australia, Canada, the US, Brazil, well. It also boasts of 1,500 branches in India. Details of this shiftage and consequent expansion are outside the scope of this paper. Yet it may be mentioned that the substitution of world peace as the chief goal of the sect has introduced a contradiction in the Brahma Kumari's essential philosophical premise of imminent destruction of the world as a prelude to the heralding of the satyug, for which the Brahma Kumaris have been preparing themselves since 1937.

Contradiction notwithstanding, the concept of celibacy, as the core doctrine has remained an intrinsic part of the sect. It has even acquired a new acceptability in view of the growing problems of population and AIDS. In relation to the control of female sexuality also it has remained relevant. This continued relevance necessitates a comment on the contemporary existence of the Brahma Kumar, sect, which has undergone a spectacular growth rate in post-independent India. The real expansion of this sect is among its lay followers calculated to be anything from 3 to 5 lakhs though far less among the still small number of 1,000 to 1,500 surrendered Kumaris. This following is drawn from all the segments of urban middle class. Clearly the sect has broken away from its limited high class and caste complexion of the colonial past while retaining its urban base but without opening out to the lower castes.113

It is difficult to pinpoint the motives which are prompting such heterogeneous sections in joining the sect or forming its lay following. Their motives are admittedly complex and throw up different aspects of control of sexuality which were also visible in the colonial period. To sum up, the core doctrine of celibacy, for instance, assumes a different meaning: (a) for single woman, where it institutes a control outside the natal family which either acts as a repression or offers a space which allows them to honourably stay chaste and single, permanently or temporarily; (b) for young married women, where the denial of sexuality can cause tension with the husband; (c) for older women or widows who have fulfilled their reproductive roles, where celibacy may index growing spirituality, where society approval is gained and (more recently), where husband seek similar goals of sexual self-control and sublimation.

In the contemporary period, these complexities not merely remain, they also deepen. I propose to show this by taking up certain case studies which throw up intricacies of issues involved and their hidden and not so hidden dimensions even more sharply to the

The first case is that of the wife of a police station officer, Sardar Singh, in Delhi, who I came across more than two decades ago.

West Indies and more recently in Russia as: She and her minor daughter were avid lay followers of the Brahma Kumari sect. She was most enthusiastic about reaching out to the other mothers of daughters as potential followers. It was in contact with her that I first realised that the sect emphasised the no-sex but not necessarily the no-marriage concept. My recent field work also confirmed the current attempt of the Brahma Kumari to project the sect merely in its anti-sex and not in an anti-marriage image. This antimarriage thrust is blunted apparently in deference to the existing widespread criticism of the sect on this ground. She also repeatedly negated the anti-marriage stand of the sect. Perhaps to appease any such fears. Her own daughter was somewhat handicapped, having been affected by polio in her childhood. This daughter eventually went on to marry, though a little late by her family and community standards, having been provided with a huge dowry.

> Clearly, till the daughter married, her sexuality was safeguarded and contained through the sect. It was ideologically controlled in the days when middle classes are finding it difficult to talk about sex to their children; when the age of marriage is going up; when the problems of dowry are increasing and the difficulties of getting a suitable boy are enormous. If perchance the daughter had not married, her single status as a potential or full Brahma Kumari, as in the case of a rich industrialist family of Sindhis in Bombay,114 would have been understood and accepted by society. Here is a sect which assures females a space, temporary or permanent, as the case might be. The ultimate goal of marriage may remain tantalisingly intact, yet suspended, till such time as 'passing of the marriageable age' or rejection of it by the female concerned, as I shall show in other cases. In a way the sect also provides a useful way of socialising of young girls specially towards their marriage. in making them pliant, obedient and nondemanding, both in sexual as well as in nonsexual matters.

> In this early socialisation, mothers play a crucial role. Significantly, mother and daughter/daughters are an important combination among the lay followers of the sect. I saw a lot of young children mostly girls with their mothers or as part of a family unit, including the father, attending the Brahma Kumari centre's activities in Delhi. The boys. if any, are either toddlers, or just above that age. On being questioned about the whereabouts of their sons, the general answer was that they were out playing.

> Yet, one of the more troublesome and fluid category of the Brahma Kumari lay followers is and has been that of young married women. At one level, she is undoubtedly supported by her husband, as seen in the mother-daughter combine or the

whole tamily becoming in members of the sect. But so far as her vow of celibacy is concerned, it may still be contested by the husband, as in the colonial past. A recent occurrence in Agra narrated to me in the Brahma Kumari camp held at Mount Abu showed one such case, where a lay female follower prompted by a Brahma Kumari, attempted to tie a 'rakhi' on her husband. The husband reacted violently and had the inmates of the Brahma Kumari centre beaten up. This led to the withdrawal of the woman in question from the sect itself. Clearly, unless the husbands are a party to the vow of celibacy or acquiesce to it willingly in relation to the wife, the sect is known to sow discord in the family life on matters of sexual rights. In very rare cases the women are able to assert themselves and that too at the cost of constant strife or even the break up of marital life.

In most other cases, either the vow of celibacy is not observed, as I discovered in my informal conversation with the younger visitors to the camp or it remains a bone of contention leading to a state of permanent strife, as in the case of a rich businessman in Calcutta (name withheld on request).115 This businessman's wife became a lay member of the sect soon after the birth of her four children, three girls and a boy. She also started to take her daughters to the Brahma Kumari centre. This lay membership of the sect remained a constant bone of contention between the husband and wife and the wife and the mother-in-law, till the husband's death recently. The daughters grown up now, who were resisting marriage even earlier, have firmly refused to marry after their father's death. So far however, none of the females have opted for the surrendered status in the sect. Significantly, the boy has remained outside the influence of the sect.

Another interesting case involving rejection of marriage is that of Usha, a middle class girl and an anaesthetist by profession who accompanied us to the camp held at Mount Abu in June 1993. She joined the sect out of her own volition and preference for staying single/celibate and carrying out her chosen career. Only in passing did she mention the 'ashanti' at her home-front. It was not clear whether this ashanti was between her parents or Usha introduced it by disclosing her intention to join the sect. It could very well be on both counts. In her case also, it was her mother who was a lay follower and Usha used to accompany her as a child to the Brahma Kumari centre in north Delhi.

After attaining her majority, when the pressure for marriage mounted, Usha made her intentions clear about formally joining the Brahma Kumari sect. It still took her a number of years after she was through with

neer medical degree that her parents consented. The social sanctity which the sect provided to the single woman came handy for Usha to withstand the pressure to marry. The option exercised by her was thus greatly facilitated by the Brahma Kumari sect and its central doctrine of celibacy. It is significant that opposition to Usha's move came not only from her father but also from her mother who was a lay member of the sect and committed to celibacy herself.

Usha's case may not be in isolation. There are a number of young females and indeed males who feel genuine anxiety and fear regarding the physical aspect of marriage or even their own sexuality, give the continued premium on virginity in the case of females and on experience and 'mardangi' (masculinity) in that of males. It is well known fact that sexuality and marriage can be traumatic for many. 116 The sect offers such cases a 'safe haven' where such demands will not be made on them.

Yet, as opposed to self-control of sexuality, there is always the 'patriarchal control' exercised over female sexuality, outside the institution of marriage. Indeed, as opposed to Usha's case who willingly opted to join the sect and exercise sexual self-control, there is the case of Indira (assumed name) in Kalyani, district Nadia, in West Bengal whose sexuality came to be controlled and repressed in the sect. This case was communicated to me by Sarbani Chaudhary, a teacher of English in the Kalyani University. Sarbani was a witness to the tragic episode which stretched from 1987 to 1992.

Indira belonged to a low middle class family. Her father was a clerk in the railways and her mother was a nurse in the government hospital. A sensitive and hard-working girl, she was eager to study further after passing her 'Madhyamik' (class ten) in 1987-88. At this stage however she disclosed her distinct unease and even resentment about her father's desire to place her in the Brahma Kumari sect as, what she termed, a 'devdasi'. 117 Yet her feelings about the sect were ambivalent. Once attached to it, she came to take pride in her ability to abide by its rules and regulations including its early morning prayers and congregational activities. Simultaneously she remained interested in the opposite sex, television, films, etc, like any other young girl of her age. In 1988-89, she entered the Kalyani University to graduate. By this time she was fully into the sect. She followed its strict regimented life with all its social taboos.118 She even took pride in pointing out that she was different from others; and how this fact evoked the respect of her peers. In Sarbani's words: 'This seemed to be an inverted kind of reaction to her repressed desire to be normal', as at the same time 'she showed herself acutely uncomfortable with her sexual, emotional and psychological desires'. By now, however, her earlier confidence to handle her university courses had been severely eroded and she shifted from one course to the other. By the end of 1990, she had started to show severe psychological disorder. During such several stress periods she would throw off her clothes. She even took to assaulting her younger brother who she had always resented as being given more importance and attention in the family. Her mother wanted her to be under psychiatric care but was prevented by her father who had full faith in the sect to cure her. In fact, the mother held her father responsible for her daughter's nervous breakdown.

By this time a Brahma Kumari centre had been established in the house itself. There was also a visible accretion to the family fortune made by the sect. The earlier single storey structure without even the cement work was turned into a double storey cemented whitewashed building by the Brahma Kumari sect. The new structure had Brahma Kumari symbols all over the place. The family moved to the first floor to two small room accommodation. With several women housed in the lower portion, the sect members became more visible than the family itself (except the father).

By now Indira had started to wear the white dress of the Brahma Kumaris. At this time she showed a deep hatred of her mother and inordinate idealisation of her father. The mother also seemed resigned to the fact that she would not be allowed to do anything for her daughter. Yet, unexpectedly in July 1992, Indira was married off, perhaps to effect a popularly believed cure to her continued mental state of ill health. In this respect it was also a belated recognition that control of sexuality was actually a repression causing grievous harm to the victim.119 This decision however culminated into tragedy. By October 1992 she had committed suicide.

Usha and Indira's cases are diametrically opposed to each other. The agency assumed by one to remain in the sect was assumed by the other to negate it. The initial consent however reluctant, given to the dictates of the father was replaced by severe internal resistance and revolt. In other words the sexual self-restraint for one was sexual-repression for the other and when lifted it had disastrous consequences.

It is without doubt that similar such cases of both willing and unwilling following can be traced to the Brahma Kumari sect. What perhaps emerges significant is the motivation of the patriarchal family operating behind taking such decisions with regard to placing their females in the Brahma Kumari sect. These may range from personal benefit to escaping the responsibility of providing for their daughter in a situation of economic

scarcity. What emerges even more important is the impact of such a decision on females, specially minor, who are unable to even know the full import of such a decision made on their behalf. In certain cases a willing conformity to the sect takes place in other resistance and revolt are inevitable. In this connection, I cite yet another case which throws up these aspects of motivation, repression and revolt, even more sharply. The following case is of Lata Mittal, as recorded by *Manushi*, in 1985:

Lata is one of six brothers and five sisters. When she was about thirteen, her mother sent her and her younger sister away to Brahma Kumari ashiam in Calcutta. Her father's protests were not heeded.

Lata says that she was exploited in the ashram and made to do manual work like washing utensils, cleaning, ironing and cooking for 25 people. She was not educated so she could not participate in the daily discourses. She was not allowed to study although she was keen to do so. Not even a newspaper was allowed on the premises so she had no access to the outside world.

After five years, Lata returned home but her mother told her that she had been sacrificed to god and must stay at the ashram. After another five years there, she could not bear it any longer so she finally left the ashram.<sup>120</sup>

Lata came back after spending ten years in the ashram but her mother never reconciled to her and was not even willing to give her food from the family kitchen. Lata had to struggle hard to find a clerical job in the post and telegraph department and be on her own. By this time her father and two of her brothers had died. Lata's other sisters were married off and had been persuaded to sign a relinquishment deed of the property in favour of their brothers. Encouraged by her sisters Lata moved court to claim her share of ancestral property consisting of four shops and a house which had been appropriated by her brothers who refused to give her any share in this. Following Lata's example, her younger sister also wanted to leave the ashram and claim her share in the property. This was in 1985; nothing is known of the case now as Manushi has not followed it up. Lata has remained outside the sect, but she has firmly rejected marriage for herself.

Lata Mittal's case highlights one significant way out of many adopted by the patnarchal families to subveit women's equal right of inheritance. <sup>121</sup> Indeed it may be seen as a most successful resolution of different problems: of conserving its inheritance in male heirs; of escaping from bearing the expenses of marriage or even maintenance; of handling sexuality of daughters and finally an honourable way of dealing with females which had the time acclaimed societal approbation. As a 'sacrifice to god' it perhaps earned them religious ment as well.

This case also highlights that the surrendering of girls in their childhood to the sect, initiated in the colonial period, has retained its popularity even now. Babb's investigation similarly shows the current surrendered kumaris to have been attached to the sect from their childhood. 122 According to him, they become fully surrendered in their teens with the permission of their families. They are drawn heavily from among the lower middle class which has its own compulsions to opt for the sect. This surrendering of girls in their childhood, shows a collusion between families and a religious institution in organising a space where legal notions that a candidate has to be major to make a decision are being subverted. Even among the lay followers the early acclimatisation of girls in their childhood may not unoften act as a prelude to their possible surrendered status.

Apart from the lay followers and the surrendered ones, there is yet another category of lay-plus-surrendered kumaris. In creation of this, the Brahma Kumari concept of the 'true family' located between the polarities of the householder and the renunciator, which had aroused severely negative and even violent reactions in the colonial past, has become a positive asset. This concept has allowed people like Usha to carry on their profession outside the sect, while still being members of the 'true family', intercepted with frequent and regularly scheduled visits to the headquarters at Mount Abu. Such followers are not given to preaching, which remains reserved for the whole timers.

Professionals like her have also been given a greater freedom in terms of dress. They are required to wear the Brahma Kuman dress only when they came to its headquarters. In all other situations they may dress in a sari and blouse (without the undergarment) in white or in white associated colours. This of course has been possible only under modern situation where education of women and urban employment, not available in colonial Sindh, has become a reality. The acceptance and even encouragement of this reality has certainly added to the sect's following. This category has been very useful and in fact popular even among the sect's male followers who invariably maintain and are encouraged to maintain the outside employment, without taking full residence in the ashram. 123

The emphasis on increasing the sect's following in post-colonial India has been a remarkable one. In fact, Brahma Kumari sect is a highly propagating sect.<sup>124</sup> The structural link-ups which it allowed its inmates to maintain with their families, as given above, shows a distinct method of propagation adopted even in its initial years. Now this propagation is evidenced even more

' forcefully in the huge yearly camps organised by the sect, once every year in the month of June at Mount Abu. This is attended by four to five hundred potential followers from all over India. These invitees are offered a free holiday in Mount Abu for 3 to 4 days; which includes boarding, lodging, sightseeing, medical care if needed, along with the orientation discourses of the sect. The amenities offered are according to the status and class of the potential follower. These camps are organised on certain principles. Different categories of people are clubbed together for a particular camp. For example, when I went to such a camp, the categories consisted of professionals, teachers and businessmen (along with their spouses). The medium used for discourses is a mixture of Hindi and English, except when the older 'dadis' are involved who by and large use Hindustani.

In the categories of people, the emphasis on intellectuals/teachers is specially marked because currently the sect has a great need of them. I not only felt it personally, but also my retired academic friend who accompanied me. Many times, this anxiety and need to . recruit has not been at all subtle as witnessed in the case of Anjani Mehta of Baroda.125 Anjani Mehta, an about-to-retire principal of a local college, still unmarried, with her soft but highly articulate ways, was 'repeatedly tempted' by the sect with offers to visit Germany free of cost, as a member of the Brahma Kumarı delegation. This offer was rejected by her. Yet it underscores the sect's great need of educated articulate followers who perhaps can be coopted temporarily in the sect, if not permanently.

This need and desire of the sect to expand is also connected with the sect's response to the deep changes in the post-colonial industrialised India, which have revolutionised certain social spheres and placed new emphasis on population control through easy availability of birth control and family planning. These social changes, which noticeably surfaced in the late 1960s and early 1970s (coinciding with the expansion of this sect), stretching from greater female mobility, education and employment, urbanisation, consumerism and modern day living, deserve a closer scrutiny and entirely separate treatment, than is possible here, since many of them have an inherently ambivalent character. 126 Yet it can be said that these increasing pressures have generated anxieties in relation to females and female sexuality in a variety of new ways. The Brahma Kumari sect offers in such a situation a socially acceptable resolution of this crisis and identity. So far as women are concerned, religion continues to provide a legitimate space, time honoured and tested.

#### Notes

[An earlier version of this paper was read at a workshop on 'Re-examining the Indian Family', held at Calcutta, July 7-9, 1995. A great deal of discussion which followed has been incorporated in this paper. I am grateful to the participants who generously supplied me with a lot of new information in the form of case studies, all of which has enriched this paper. I am also most grateful to Uma Chakravarti and Patricta Überor whose comments on various aspects have helped me to etch out my arguments more sharply and focus on certain aspects which may have remained marginal.]

   This is an official biography of the founder of the sect.
- 9 In this Lekhraj was pursuing a more traditional goal for women as compared to Gandhi, whose aims were more political Gandhi's ideas on control of sexuality served to create a favourable social atmosphere for women to come out of their houses and participate in social and political struggle; to be able to live away from home without fear, shame or exploitation. Gandhi's upholding of ceilbacy as a higher ideal than marriage also made it possible for many women to live unmarried and yet be respected in society. Lekhraj, on the other hand, sought

- to control female sexuality by withdrawing them both from their domestic as well as political-public space offered by Gandhi without really handling public censure in any effective way. In a way, the Brahma Kumari sect sought to contain rather than advance the liberalising effects of the control of female sexuality as posed by Gandhi For details see Kishwar, 'Gandhi on Women'

- 65 Although most folklore, popular published dramas and 'kissa' (folk-romances) about King Bharthari and Queen Pingala centre on the fruit of immortality and Pingala's deceit. a lesser known Rajasthani variant sung by a local bard, as recorded by Ann Grodzins Gold, interestingly has no reference to the illicit connection or deceit of Pingala, who is depicted as 'an impeccably true wife' of king Bharthari. In this version Pingala commits 'sati' on being informed that her husband was dead. However this version also shows Pingala's fanatic fidelity as yet another dangerous feminine wile in which she becomes sati in order to kill her husband. Gold accepts both the versions of Pingala as impetus for Bharthari's enlightenment and thus valued positive forces in tale of renunciation. This rendering shifts the accent from the wiles of women' to renunciation as a value in householders' lives. See Ann Grodzins Gold, A Carnival of Parting: The Tales of King Bharthari and King Gopi Chand as Sung and Told by Madhu Natisar Nath of Ghatiyali, Rajasthan, Munshiram Manoharlal Publishers, New Delhi, 1993.

- 89 The pir cult of Mast Qalander showed masti, ie, no physical inhibition in its display of emotions, in its religious fervour and celebration.
- 90 For the dual form of medieval bhakti, the Parakiya: erotic, followed by unorthodox lower class Hindus and the Svakiya: antierotic, embraced by higher caste Hindus see Gatwood, Devi, pp 69-71.
- 91 O'Flaherty shows how in the puranic mythology Siva's character swung widely between extreme eroticism and asceticism. See Wendy D O'Flaherty, Asceticism and Eroticism in the Mythology of Siva, Oxford University Press, London.
- 92 The rumours ranged from depicting the sect as a kind of 'Devdasi' cult to charges of incest and sexual exploitation of the Brahma Kumaris by sexually insatiable pitashree Lekhraj and by a handful of brothers or Brahma Kumars, necessitating abortions, etc This was also an illegtimate enjoyment of sexuality, where a woman belonged to not one man but to several men and indulged in sexual intercourse not for procreation but for enjoyment. The founder and his leading followers were accused of using a special kind of 'surma' (kohl), so that all those who came in contact with them were hypnotised. Personal interview, K R Malkani. Reference to this is also made in the official biography. See Chander, Ek Adbhut, p 119.

Here it may be pointed out that wearing of surma was common to both males and females of the Hindu and Muslim community of colonial Sindh. Explaining the charge of hypnotism, Dadi Manohar Indira mentioned the use of surma in combination with the yogic practice adopted by the Brahma Kumans of meditating with their eyes open (which continues to this day). For this the learned among them followed the practice of 'drishti lena' from the Brahma Baba and 'drishti dena' to the new comers, those who got newly initiated into the sect. In dirishti lena and dena the accent was on eye contact which was said to evoke a bond between the two, facilitating concentration. This produced a kind of unblinking stare which exposed the Brahma Kumaris to the charge of 'ankhon se seh lena' (mesmerising through the eyes). Personal interview, Dadı Manohar Indira. This practice undoubtedly led to the rumours of Brahma Kumaris using black magic to ensnare people; youngsters were told not to look into the eyes of a Brahma Kumari. Interestingly, except for the older generation of followers, surma is no longer worn by Brahma Kumaris.

- 93 The Significant role played by the floating rumours and stories which got built in the popular perception and belief around Gandhi's image in 1921-22, at variance with his ideology and action, is brought out in an important work by Shahid Amin, 'Gandhi as Mahatma: Gorakhpur District, Eastern UP, 1921-22' in Ranjit Guha (ed), Subaltern Studies III: Writings on South Asian History and Society, Oxford University Press, Delhi, 1984, pp 1-61. Also see his recent work, Event, Metaphor, Memory: Chauri Chaura, 1922-1992, Oxford University Press, 1995.

- 99 A widow's estate was a limited one as it reverted back to the male reversioners of her husband after her death. Therefore she could not even alienate her property except for legal necessity, as defined by law. For details see Mula Principles of Hindu Law, pp 201-04.
- 100 Chander, Ek Adhhut, p 79.
- 101 In a 1904 partnership deed for trade purposes between Sindhis of Bhaiband community and Punjabi Hindus, it was effected in writing that out of a profit of 16 annas and 3 pies, 3 pies were to be set aside for purposes of charity. Evidence quoted by Claude Markovitz, Teen Murti, 17.895.
- 102 Information given by Kavita Punjabi, Calcutta, July 8, 1995.
- 103 Babb, Redemptive Encounters, p 131
- 104 The official biography celebrates the kind of joyous life led by the ashramites, extending from frequent picnics to the use of technology inside the ashram in the form of gramophone which played popular film songs like 'so ja raj kumari so ja' late in the evening before they went off to sleep. Different songs were played in the morning to wake them up for early prayers. See Chander, Ek Adbhut, pp 121, 180-87. These songs have now been replaced by specially composed 'bhajans', sung by popular play-back singers. In fact, the use of technology by the sect is pronounced; it can be witnessed in the use of special light, music and other atmospheric effects around the life-size image of Lakhraj. to produce an out-worldly effect conducive to transporting the devotee to a different world.
- 105 Personal interview, R K Malkani

- 107 Ibid, pp 127-30.
- 108 The following account of the opposition to the sect has been taken from ibid, pp 76-130.
- 109 Ibid, p 10
- 110 Ibid, pp 165-66.
- 111 Personal interview with Brahma Kumari Rajkumari, Mount Abu, June 6-7, 1993.
- 112 For the ever growing impact of the sect abroad, specially in UK and the United Nations, see Mitchner, Guru.
- 113 Currently, the sect is attempting to fan out into the rural areas but the success of this

- attempt, though claimed, remains unsubstantiated.
- 114 In this case, narrated to me by the noted writer, Quaritulain Hyder, the two sisters (now quite aged) of a well known tycoon in Bombay (name withheld) were encouraged by the family members to become followers of the sect, quite early in their life Facing the problem of hypergamy, they have remained in the fold of Brahma Kumari sect.
- 115 Communicated by Rajkumari Chopra, Calcutta, July 8, 1995.
- 116 A whole lot of personal letters seeking advice on such matters may be found in popular magazines for women. These letters are mostly from young urban men and women, for women the overnight change in an arranged marriage from its consummation to child birth can be painful, fearful and violent; for men on the other hand even running away from home on the eve of their marriage (joining the company of sadhus or entering an ashram) are also not unknown. I am grateful to Patricia Überoi for this information.
- 117 The use of devdasi by Indira is interesting, as here she is clearly referring to the popular perception of the Brahma Kumari sect as one given to sexual-exploitation (like that of the Devdasi,), rather than maintaining the sexual-sanctity of females, as claimed by the sect.
- 118 These taboos were in relation to the lay world to shun all physical touch with any one; not to eat or accept food, cooked or uncooked from outsiders except fruits and milk; not to accept any money for oneself from outsiders or spend any money on oneself. Observed at the camp held at Mount Abu; also see Chander, Ek Adbhut, pp 141-42.
- 119 It may also indicate the inability for the Brahma Kumari institution to take full and final responsibility for an individual like Indira. The sect in fact scored by allowing her to go back to a worldly life, rather than agree to furnish psychiatric treatment which may reflect on its own failings.
- 120 Manushi, September-October 1985, pp 37-38; see interview recorded by Anindita Banerjee

## Meanings of Agriculture

Essays in South Asian History and Economics

#### Peter Robb (editor)

The essays in this volume question established interpretations. The attention to perceptions within this book overcomes the tendency in much earlier writing to stereotype agriculture and to neglect or musinterpret details of agricultural processes and contexts. Together, the eleven essays and a critical introduction constitute a powerful new prospectus for agraman studies. This book will be of significance to historians, economists and policy-makers.

## The Magic Mountains

Hill Stations and the British Raj Dane Kennedy

The hill stations of colonial India functioned as sanctuaries for the British ruling race, forming enclaves of British culture in the mountains of the subcontinent. Anglican church spires, quaint Tudor-style cottages, and Victorian flower gardens lovingly evoked a distant homeland, giving hill stations like Simla a distinct British identity in the midst of a foreign environment.

## India's Economic Reforms 1991-2001

Vijay Joshi / I.M.D. Little

In 1991, India embarked on major economic reforms that have the potential to transform its future economic development. This book, written by two distinguished analysts of the Indian economy is a comprehensive evaluation of these reforms. It analyses the progress made in the last five years, considers the likelihood of its continuance and suggests an agenda for the future.

## Swiss TNCs in India Public Interest Research Group

This study analyses the macro-level nature and pattern of Swiss investments in India during the postliberalisation period (1991-95), as well as the operations of four major Swiss Transnational Companies (TNCs) in India - Asea Brown Boveri, Ciba Geigy, Nestle and Sandoz. Using information based on wide ranging first hand interviews, a variety of printed material and official documents, this study uses the Swiss case to demonstrate many loopholes in the argument that transnationals are the panacea for most of the ills of India.

## Lent and Lost

Foreign Credit and Third World Development Cheryl Payer

In this book, Cheryl Payer, challenges our understanding of the origins of the debt crisis. She takes the arguments of orthodox economists and shows how their policy prescription led debtor countries to the most serious depression of the century. It is a devastating critique of the assumption that poor countries are natural importers of capital. Payer argues that this myth merely served to support the export ambitions and Cold War strategies of the US. She believes that the South must break with development strategies that rely on foreign capital.

## Globalisation and Third World Trade Unions

The Challenge of Rapid Economic Change

Edited by Henk Thomas

This study is the outcome of a series of original investigations into the deep crisis in which the organised labour movement in the South finds itself as a result of changes in the global economy. The regional overviews and illustrative country case studies from Asia, Latin America and Africa show how trade unions currently face a variety of difficult challenges.

# Economic Liberalisation and Kerala's Industrial Sector An Assessment of Investment Opportunities

#### **Sunil Mani**

Kerala is one of the least industrially developed states of the union. There are essentially three main constraints or factors that act against the ability of the state to attract investments, namely, the psychological fear created by militant trade unions, the shortage of land and of electric power. Alive to removing these constraints the government is implementing a number of infrastructural projects essentially to remove the latter two constraints. The response of private sector industry to these initiatives has been moderately satisfactory but the state still attracts only a minute fraction of the total investments in the country as a whole.

THE purpose of this paper is to map out the investment possibilities in the manufacturing sector of Kerala state consequent to the economic reform which is generally interpreted as pro active to investment opportunities. The paper first maps out the salient features of the new industrial policy statement of government of India announced in July 1991 and then attempts an analysis of the growth performance of the industrial sector in the post-reform period. This is then followed by a detailed analysis of the Kerala situation.

India's industrial sector has been governed by an archaic policy regime which placed much emphasis on regulating both entry and exit of firms into an industry through essentially the licensing policy. Studies have shown that this left a large discretionary role for the government. The new statement on industrial policy announced in July 1991 sought to remove these imperfections through essentially the following changes:

- (i) removal of industrial licensing from all but a few industries (which account for only about 15 per cent of value added in manufacturing);
- (ii) reduction in the number of industries reserved for the public sector to six;
- (iii) elimination of separate permission for investment and expansion under the MRTP Act;
- (iv) automatic approval of foreign investment;
- (v) liberalisation of policies for drugs and pharmaceutical industries;
- (vi) revision of the national mineral policy and amendment of the Mines and Mineral Development Act to open the sector to private and foreign investment; and
- (vii) extension of RBI-based automatic approval policy for foreign investment to mining, subject to a limit of 50 per cent on foreign equity.

Prima facie these changes appear to be farreaching and a major departure from the past. But a detailed analysis has shown that they are not so radical as made out to be [Mani 1995]. In the following I evaluate the effect of these policies on various aspects of the industrial sector. I begin by analysing the growth performance of the industrial sector.

#### **ANALYSIS OF GROWTH PERFORMANCE**

It is now well documented that towards the end of the Third Five-Year Plan the industrial sector entered a phase of stagnation that lasted until the late 1970s (see Figure 1). The actual rate of growth has been much below the targeted rate, especially during the Eighth Plan period: the period (1991-92 through 1994-95) corresponds to the postreform phase. This shows that there has been a significant deceleration in the overall rate of growth of the industrial sector during this period. But if one examines the annual growth rates during the period (Table 1) there has been a definite upturn since 1993-94. While the recovery in 1993-94 has been very largely contributed by the basic industries (66 per cent), the improved performance in 1994-95 is by the capital goods sector (55 per cent) (see Figure 2).

Some commentators have been quick to attribute this improvement in growth rates to the liberalisation of industrial policies [UNIDO 1995]. According to this study, growth has been accompanied by a change in the pattern of industries. For example, food processing is emerging as an important industry attracting investments. In the absence of sectorwise value added beyond 1991-92, one cannot draw firm conclusions about the structural changes taking place in the industrial sector. However if one analyses the sectoral distribution of industrial entrepreneurs memoranda (IEMs) filed by investors after July 1991, which reflect the intentions with respect to investment, one can glean some ideas about the investment preferences of entrepreneurs before and after liberalisation. A comparison of such intentions during the three years before the onset of economic reforms (i e, 1988-1990), shows that investment intentions rose from 3,009 during that period to 16,598 in the post-reform period. Food processing and vegetable oil including vanaspati industries emerged as major new attractions after the reforms with investment intentions numbering 1,170 compared with less than 200 in the pre-reform three-year period [UNIDO 1995].

So if food processing industry is one of the important products of liberalisation then one could argue that the increase in industrial output since 1993-94 has very little to do with the new policies as these have been largely contributed by either the basic goods or capital goods industry which does not seem to have received substantial fresh investments during the post-liberalisation period. In fact we argue that the higher rate of growth is largely contributed by significant improvements in capacity utilisation of existing enterprises. According to a survey conducted by the Confederation of Indian Industries, over 70 per cent of the respondents to its survey had an average capacity utilisation of more than 80 per cent in the post-liberalisation period.

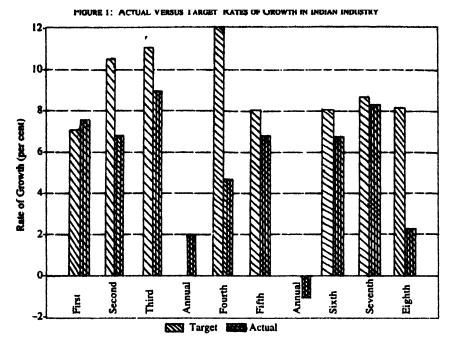

FIGURE 2: RELATIVE CONTRIBUTION OF VARIOUS SUB-SECTORS TO OVERALL GROWTH RATE IN INDUSTRY

It is against this brief background that we analyse investment possibilities in the state of Kerala. The note is organised as follows. It is structured into three sections. In section 1, 1 present some distinctive features of Kerala state from the point of manufacturing investment. In the second section, I give a list of industries together with some relevant details and in the third and last section I present the official list drawn up by the state government.

#### MANUPACTURING INVESTMENT

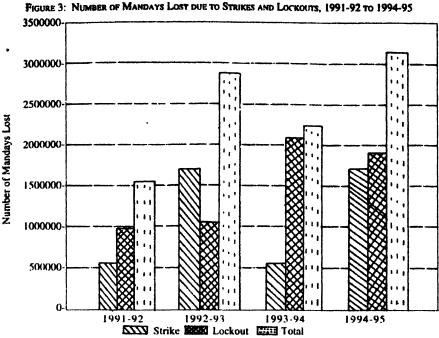

Kerala is one of the least industrialised states in the country. There are many well known reasons why this is so. If one were to quickly summarise these constraints there are at least three, namely (a) the psychological fear created by militant trade unions; (b) the high cost of land acquisition; and (c) the worsening power situation. I discuss each of these three constraints seriatim and explore whether there has been a radical improvement

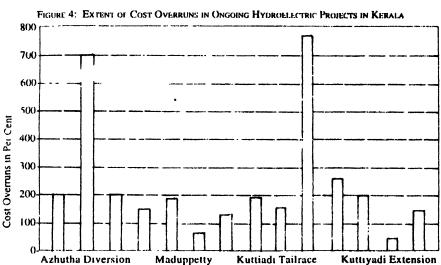

in any of these in the post-interalisation period. This is followed by a discussion of the intended and actual investment proposals that the state has attracted during the post-reform period.

One of the most important reasons why the state has not been a haven for industrial development is the feeling that labour in Kerala is highly unionised. Very often the unions have adopted a rather militant posture while settling industrial disputes. While the number of mandays lost due to strikes and lockouts has come down, the perceived recalcitrant nature of the labour has created a sort of psychological fear among the prospective entrepreneurs forcing them to shy away from the state. To arrive at a realistic picture I conducted a survey of a select number of industrialists stratified into three groups. In the first group I had a small sample of prominent industrialists from outside Kerala but who have substantial industrial interests within the state. The second group consisted of a sample of well known industrialists of Kerala origin who have established industrial ventures in the neighbouring states of Karnataka and Tamil Nadu. The third group had a few industrialists primarily from outside the state who wanted to invest in the state but finally chose to go elsewhere due to various reasons. All the three were asked to rank the various constraining factors in establishing industrial ventures and all of them were unanimous that it is the fear of the militant nature of the trade unions combined with the rather high wage rates of casual and head-load workers that is the main reason. Despite the best efforts by several state agencies and specially the Kerala State Industrial Development Corporation (KSIDC) to dispel this notion, it seems to have got well entrenched in the minds of the entrepreneurs. During the last four years the number of mandays lost due to strikes and lockouts has actually increased (Figure 3). Given this sort of a fluctuating trend it is rather difficult to conclude that the state of industrial peace in the state has actually improved since the onset of the reforms.

The second constraint is with reference to the non-availability of large tracts of land at affordable prices. Given the high density of population and the high opportunity cost of land, availability of large tracts of land at affordable prices compared to neighbouring states is still another inhibiting factor. In fact I have been told by a prominent industrialist (who belongs to the first category above) that processing of the high quality clays found in parts of the state is made unviable by the sheer cost of land.

The third constraint is the shortage of power. Kerala used to pride itself as one of the few states in the country that had surplus power. But it is no longer the case. The state is in the grip of a severe power shortage.

Currently the state has 11 hydroelectric stations with a total installed capacity of 1,503 MW. To this one should add the share from the central power grid which is around 450 MW. By 1997-98 the KSEB expects to add another 356 MW. The Kayamkulam thermal project of 400 MW is expected to be commissioned (by the NTPC) before year 2000. The total capacity addition in public sector, therefore, is 756 MW. It is estimated (by the KSEB) that the demand-supply gap at peak demand will touch 2,463 MW by year 2001-2002. To ease this constraint the KSEB and KSIDC have initiated steps to welcome private participation in generation by independent power producers (IPPs). So far I understand that nine power purchase agreements for 4,300 MW have been signed by the KSEB, But fears have been expressed as to how much of these will actually fructify into real propositions in the near future. So

in the light of this, I would expect the power constraint to be very much in place for the next four years at least. It should of course be mentioned that Kerala has one of the lowest power tariffs in the country (see Table 2). But with the IPPs coming into stream one need not expect these low tariffs to continue in the tuture and the tariffs in the state may not be too different from rest of the country. Also it is expected that there will be a steep upward revision in the power tariffs by the KSEB immediately after the elections in May 1996, though its actual impact will be felt only on those new industrial units which come into stream after December 1996. This is further explained when we discuss the initiatives of the state government with respect to promotion of new investments into the state.

Some experts have been attributing the present power crisis in the state to flawed

planning by the successive governments.1 According to this opinion, the power distribution system in the state needs hydel units to maintain the peak load and thermal units to supply the base load. Most of the hydroelectric projects in the state have been designed as peak-load stations, and had their limitations when used to raise the base-load. So the only remedy to the situation is to have thermal base-load stations which can work day and night throughout the year. A second flaw in the planning has been the delay in commissioning a number of small hydel projects. Most of these projects have suffered massive time and cost overruns: the cost overruns range from 50 per cent of the original project cost to as high as 800 per cent. According to Morris (1996) the delays and cost overruns arise primarily because of the practice of spreading thin the state's resources to accommodate more projects than it can bear (see Figure 4).

A third factor in the flaw in planning arose due to the pressure exerted by the environmental lobby. According to Morris (1996), "In 1989-90 the Kerala government identified the total exploitable hydro potential of the state to be 5,120 MW including, the existing schemes of 1,476.5 MW. As much as 1,025 MW of the potential having the lowest costs (representing 21 per cent of the generation potential) had to be dropped due to the pressure of the environmental lobby". On the contrary the environmental lobby is blaming successive governments for being lackadaisical over power planning.

Of the three, the only constraint that is getting remedied, at least to some extent is the power constraint. This depends very much on the ability of the new IPP projects to come on stream within the stipulated time period. It is claimed that trade unions belonging to various political affiliations are adopting a more pragmatic approach to settling industrial disputes and so the state is experiencing, relatively speaking, better industrial peace. I do not have any independent sources of data to verify this claim. Regarding the land constraint the KSIDC has been developing the concept of industrial parks. I will elaborate upon this concept subsequently.

In order to hasten the process of industrialisation, the state government has been putting into effect a series of policies and institutional changes/improvements.

#### STATE GOVERNMENT INITIALIVES

Almost all the states in the country have been vying with one another to make their respective states attractive for industrial investments. Not to be left behind, Kerala too has effected a number of policy and institutional changes. Following are some of the important incentives and institutional set ups announced by the government for fresh investments in the state. In order to put this

in a comparative perspective I also provide a gist of the major incentives announced by the neighbouring states of Tamil Nadu and Karnataka (see Table 3) The table shows that Kerala has indeed offered a better range of incentives than its immediate neighbours This policy of promoting private investments, both foreign and domestic, by offering a range of essentially fiscal incentives is decried as it is tantamount to transferring resources from the citizens of that state to the investor [Srintvasan 1995] To offset poor infrastructure facilities the state has invested in various types of industrial parks which will have high quality industrial and social infrastructure including captive power plants (see Table 4) Through these various projects the state government has been consciously attempting to overcome the constraints with respect to land, water, etc

The response of private industry to these changes has been somewhat lukewarm, when we compare the picture with respect to other states. This can be gauged from the intentions for industrial investments as revealed through industrial entrepreneurs memorandum (IEM) and letters of intent (LOI) filed (see Table 5).

The table clearly shows that the state has been able to attract less than 1 per cent of the investment intentions in the country Much of the investment proposals have gone to aiready developed states like Maharashtra, Gujarat and Tamil Nadu This shows that merely giving incentives is not a sufficient condition for attracting investments as all the states have been able to give some incentives or other Instead investments seem to be attracted towards those states which have a well-developed infrastructure. In the light of this it may be possible for Kerala to attract larger investments in the near future given the massive investments in infra structural projects being implemented by KINFRA

The data presented above are only intentions to invest in the state and not actual investments. The trends in actual investments since 1991-92 are presented in Table 6. The table shows that there has been a tremendous increase in industrial investment in the state since 1991-92 In fact about 47 per cent (taking into account only the private sector investments) of the investment intentions have actually tructified into commercial propositions It sounds like a good achievement as one out of every Rs 2 crore worth of proposed investments have actually been implemented within a short period. How ever I do not have comparable data for the country as a whole or for the neighbouring states 2 to analyse the record of the state in a comparative fashion. The two sectors that contributed to this increase are the small scale sector and the central public sector The share of private sector in cumulative

TABLE 3 INDUSTRIAL POLICY REFORMS OF KERALA, TAMEL NADU AND KARNATAKA

| Kerala                                                                                                                                                                                                                                                                                                                                                                                                                              | Tamil Nadu                                                                                                                                                                                                                             | Karnataka                                                                                          |

TABLE 4 INFRASTRUCTURE PROJECTS BEING DEVFLOPED

Techno industrial park at Calicut,
Integrated industrial township at Puduvype
Industrial Park at Irapuram
International Apparel Park Trivandrum
Integrated infrastructure Development Centre for Small Industries Menamkulam Trivandrum,
Export Promotion Industrial Park at Kakkanad, Ernakulam
Integrated Industrial Township, Palghat and I Kin which is a joint venture public limited non-banking
finance company between ICICI and KINFRA

Note Most, if not all, of these projects are implemented by KINFRA

Investments is as fight as of per continuous prices and investment are not available. While Kerala's record of attracting industrial investments compared to other states may not be impressive, its record since 1991 compared to its own record in the pre-1991 period is certainly impressive. In fact I would expect the investment picture to improve in the light of considerable efforts made by the state with respect to reducing land and power constraints.

#### POTENTIAL INVESTMENT OPPORTUNITIES — Unofficial View

On the basis of the discussions that I have been having with a number of experts a list of potential investment areas are drawn up. Due consideration is given to whether the state possess any comparative advantage in these industries. Second, these are all small, and medium type investments in the sense that they do not involve investments in plant and machinery exceeding Rs 10 million (\$ 0.28 million). Third, they require more skilled labour. Finally these are all products which can be marketed quite easily either in the domestic market itself or exported so that an elaborate distribution network is not necessary. I have thus a list of three areas where it will be worthwhile to invest. I discuss each of them in some detail below:

(1) Electronics and Computer Software: India is slowly emerging as an important player in the region in terms of output of electronic products and computer software. Given the comparative advantage of the state in terms of availability of skilled professionals who could be employed at say two-thirds the salaries of comparable professionals at a place like Bangalore, Kerala offers immense possibilities for these industries. Realising the potential the state government has set up a software technology park in Trivandrum in 1991 and it started commercial operations in September 1994. Established in an area of about 180 acres, the park offers several incentives for small, medium and large enterprises operating in the area of electronics and computer software. The park has at present 11 units in operation (a detailed list of these is given at the end of this study) and it can support up to about 100 units. The average turnover of a unit is about Rs 10 million. The main incentives offered by the park are mapped out in Table 7.

The Technopark is certainly a convenient place and I suggest medical electronics and computer software as two of the industries that are eminently suitable for being located in the park. Given the fact that Trivandrum itself has a number of important hospitals both in the state and private sector, the exact nature of products can be assessed without much difficulty. The park has a list of consultants for conducting feasibility studies. For most industrialists the first choice for

locating any electronics-based industrial unit is Bangalore given its already existing reputation as the so-called electronics capital city of India. However, Bangalore's potential in this area is becoming saturated. On a number of indicators of cost Trivandrum now compares very favourably with Bangalore as a prime location for setting up electronics industries (Table 8). The data presented above shows very clearly the advantages of choosing Trivandrum and the Technopark as an ideal place of location for electronics firms.

(2) Rubberwood-based industries: Though Kerala is the largest natural rubber producing state in the country, there exists very little scope for starting rubber-based industries in the state. Instead immense possibilities exist in the state. India is emerging as a major rubberwood producer with a production of about 1 million cubic metre annually. At the moment approximately 45 per cent is used for low value added products like the packing case industry, 12 per cent in the core veneer industry. Rubber wood processing industry (treated and seasoned) consumes less than 3 per cent of total production (see Figure 5). Recent technological breakthroughs in chemically treating the wood has enhanced its usage as a timber for manufacturing value added products such as (1) mouldings; (2) furniture and components; (3) doors and windows; (4) textile shutters, (5) utility items, brush handles. houseware, etc. (6) flush doors. Estimates of the availability of rubberwood under different scenarios are available and these are presented in Figure 6.

The estimated production of sawn timber under Scenario I, in which area under natural rubber is assumed to grow constantly at 5 per cent is about 0.315 million cubic metre in 1993 and it is expected to grow to 0.442 million cubic metre by the year 2000. Scenario II is a more conservative one which assumes a declining trend in the growth of rubber plantations the estimated production of sawn timber is 0.352 million cubic metres by the year 2000. The important point to note is that irrespective of the scenarios there will be adequate availability of raw material Much of the machinery and chemicals used in the treatment of the wood is also available from domestic sources. The only constraint is the rising prices of logs [see Figure 7]

There has been a sharp increase in the prices in 1995. But even at this high price it is still much cheaper than say teak wood Moreover, given the current ecological considerations rubber wood is very acceptable especially in western markets. So there is an excellent domestic and international demand for rubber wood based value-added products like furniture doors and windows etc. There are at present 45 units in the country engaged in the manufacture of various processed items. In the light of the

above, I recommended that it should be possible to set up units in the new Export Promotion Industrial Park at Cochin or at the Wise Park at Palghat. There is now an active organisation known as the Indian Rubberwood Taskforce based at Kottayam.

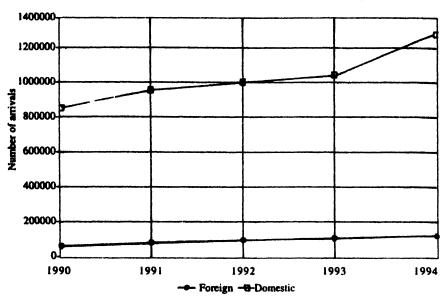

(3) Tourism-related Services: Kerala is endowed with unique natural beauty and so there has been a spurt in tourist arrivals in the state during the last few years (see Figure 8). However Kerala's share of foreign tourist increased rather slowly from about 5 per cent in 1990 to about 6.70 per cent in 1994. There has also been a spurt in domestic tourist arrivals. Estimates of earnings from tourism snows a four-fold increase during the period 1990-94.

The lower rate of growth of foreign tourist arrivals in Kerala is partly attributable to the lack of availability of adequate infrastructural facilities including budget hotels, etc. In fact this is going to be felt more acutely in the next three or four years as consequent to the fairly good marketing of the state as a tourist destination the arrivals of especially foreign tourists are bound to increase. The new and direct charter flights to Trivandrum and the increased flights of this variety once the airports at Cochin and Calicut are upgraded are good indications of the shape of things to come.

At present there is a multiplicity of organisations in the state charged with the development of tourism. While at the state level there is the department of tourism, the Kerala State Tourism Development Corporation and to some extent the forest department, at the district level there are the district tourism promotion councils all of them usually working at cross purposes. The net result is a spreading thin of the resources across a large area. Some positive developments have taken place in infrastructural development with the formation of a new company, the Tourism Resort Kerala (TRKL), a subsidiary of KTDC. Along with the Taj group, the new company has been able to mobilise resources for three new hotel projects at Cochin, Varkala and Kumarakom. But all these hotels are meant for the so-called top-end tourists.

According to the policy on tourism announced in July 1995, the state government is offering a spate of incentives for tourism-related services. Absence of affordable and decent hotels in some of the important tourist centres is still a major handicap. The tourist centres that I have in mind are Thekkady, Alleppey, Kodungalloor, Athirapally, etc. Along with the hotels one could also consider ayurvedic treatment centres. No doubt this will go well with not only the foreign tourists but also tourists from northern India. So a kind of nature tourism routed in the rich heritage of Kerala is what I am envisaging. This product will necessitate some profes-

FIGURE 8: NUMBER OF FOREIGN AND DOMESTIC TOURIST ARRIVALS IN KERALA, 1990-94

sional marketing within India and abroad. But with the existence of a number of professional advertisement and marketing agencies this may not be a problem at all.

## POTENTIAL INVESTMENT OPPORTUNITIES OFFICIAL VIEW

In contrast to our modest list of investment opportunities, the state government has drawn up a large list. I am not in agreement with all the options presented. Nevertheless, from the point of view of increasing the range of options available to the potential investors, I merely reproduce, without comments, the official list of investment opportunities in the state (see Table 9). The list is quite exhaustive though I am rather sceptical about the feasibility of most of them. Suffice it to say that two of the three industries which I have selected finds a place in the official list as well.

Kerala has not been considered a favourite spot for industrial investments for a very long time. Initially, this has been to a large extent because of the poor record of the state with respect to labour disputes. Of late two more constraints, namely, land and power shortage have been added to this list. The state government through its various promotional agencies is putting into effect a number of infrastructure projects. Though the response from private sector industry to these initiatives is certainly good when considered historically, it is only a small response compared to that in some of the neighbouring states. Our analysis shows that the state holds some potential for small and medium type projects which can be established in one of the industrial parks under construction. Much depends on the ability of the state to provide good quality electricity in an uninterrupted fashion.

#### Notes

[This paper is largely based on a study that I did for Federation of Kerala Association of North America. I thank K N Raj and T N Krishnan for encouraging me to work on this study. Thanks are also due to various officials of the state government and in particular to Paul Antony, Karmachandran, K G Satheesh Kumar and S Balakrishnan. However none of them is to be implicated for any errors that remain.]

1 This view has been expressed by the noted energy expert R V G Menon in his recent keynote address to the seminar on the Power Crisis in the State and the Solutions organised by the Institution of Engineers on March 17, 1996 at Trivandrum. Excerpts from this address are reported in *The Hindu*, March 18, 1996, p 3. 2 Suffice it to say that in a relative fashion the actual investments into Kerala will only be a small fraction of what some of her neighbours have been able to attract. For instance, the car project alone, from Ford Motor Company which

# NABAKRUSHNA CHOUDHURY CENTRE FOR DEVELOPMENT STUDIES

BHUBANESWAR-751013, ORISSA

Applications are invited for the following posts in the UGC Scale of Pay to reach the Centre on or before September 30th, 1996.

Director, Professor of Economics (Two), Reader in Economics (one), Reader in Social Anthropology (One), Lecturer in Industrial Economics (One), Research Associate in Sociology, Economics and Social Anthropology (one in each).

Additional posts of Professor may also be considered on availability of funds. Applications will also be considered for the Visiting Fellows in Economics and Social Anthropology on contract basis.

Prescribed application forms and information regarding prescribed minimum qualification and other particulars can be obtained from the Secretary of the Centre by sending an account payee Demand Draft of Rs. 50/- drawn on State Bank of India, Bhubaneswar and payable to NABAKRUSHNA CHOUDHURY CENTRE FOR DEVELOPMENT STUDIES together with a self addressed envelope bearing stamp of Rs. 3/-.

(B. MISRA) DIRECTOR

# Analysis of Drug Prices, 1980 to 1995

#### Wishvas Rane

Since the drug policy of 1986, many changes have been introduced liberalising the environment for drug manufacturing and marketing. These changes have apparently come about as a response to the drug industry's plea that controls in India were too stringent and that without controls prices would stabilise and not rise. Yet, a categorywise analysis of prices of drugs over a period of 15 years shows that there is a general rising trend in prices, especially of essential and life-saving drugs.

IT is difficult to work out an ideal drug price index, because of the many variations in diseases and their treatments. It is also difficult because of different prices of different brands of the same medicine. But there is need to find out the real rise (or fall) in drug prices.

The drug industry often claimed that drug prices have not increased when the prices of other consumables have risen. This claim is normally accepted by the government which then pats its own back for the success of its Drug Price Control Orders (DPCOs) to contain drug prices. The Consumer Price Index for urban industrial workers increased by 273 per cent during 1980 to 1995 (April). This rapid rise was due to the unprecedented rise in food prices during this period. It would therefore be apt to compare drug prices with those of an industrial consumer good like clothing and footwear. The price index for this group has increased by 170 per cent during this period.

When we consider drug prices, we should certainly consider the Hathi Committee comments on drug prices. It says "In appreciation of the fact that ill-health has major socio-economic implications, the committee feels that in a welfare state, availability of prophylactics and curatives should receive the highest priority on par with food and shelter. Production and distribution of drugs should, therefore, constitute an important social responsibility of the state. The committee is of the opinion that trade aspects of this vital industry should be divorced from the ordinary accepted principles of trade for profit".

The Drug Policy (DP) of 1978 and the DPCO 1979, were based, albeit partially, on recommendations of the Hathi Committee. Forthe first time, comprehensive price control was introduced in the drug industry (though some price control measures had been in force since 1970). In the aftermath of the 1978 DP, the organised Indian private sector created a solid base for itself in the drug industry. Having done so, it joined the MNCs in the campaign for reversal of the 1978 DP.

.By the early 1980s, the industry, led by MNCs, started making belligerent noises for reversal of the 1978 DP and for decreased controls. The industry argued that drug production was becoming unprofitable and

even proceeded to deliberately reduce production of essential drugs.

An RBI analysis of the working of FERA and other companies reveals that the progress of the industry in the 1980s has been quite impressive. The increase in turnover in relation to the investment in fixed assets, has been more than proportionate to the additional capital outlay on modernisation and expansion, and dividends on enlarged capital could be paid liberally out of profits after tax was also retained in the business. The industry had not had any difficulty in finding the requisite resources for modernisation (Kothari's Year Book, 1987, p. A. 181).

This shows that the industry was making more than sufficient profits and there was no reason for asking for higher prices.

From these reports it may be concluded that the drug industry as a whole, both Indian and MNCs performed well in financial terms, and the campaign of the industry about less profitability due to DPCOs was misleading. In March 1985, the central government delicensed 94 bulk drugs making the policy of reservation of drug licences almost infructuous. The 1986 policy, in one sweep, reduced the span of price control from 347 bulk drugs to 166 drugs. It decreased the number of categories under price control to two and increased the mark-ups on these to 75 and 100 per cent.

In September 1994, came modifications to DP 1986, when different maximum allowable post-manufacturing expenses (MAPE) were done away with and a uniform MAPE of 100 per cent in all cases introduced for all drugs under price control. The number of price controlled drugs was brought down from 142 to 73 and greater profitability (up to 4 per cent) allowed for bulk drug manufacturing. By offering such a liberal drug policy, the government has conveniently forgotten that even developed market economies treat the drug industry differently from the consumer goods industry. Price and production controls are enforced in all developed countries.

In order to prove that the drug prices have increased substantially, an attempt is made here to compare the prices of drugs in June 1980 to those in April 1995, using data from MIMS India. Vol 1, No 1 (June 1980) and MIMS India, Vol 15, No 4 (April 1995).

Drug prices of all the products and packs, showing rise or reduction in prices have been considered and the prices of a single unit of such products are totalled. Some 778 product packs have been compared. This is roughly 55 per cent of all the products of June 1990 as listed in MIMS. For want of space only product packs showing a rise of over 100 per cent have been listed with respective per cent price rise. There were 118 product packs showing a price rise of less than 50 per cent, 145 showing a price rise between 50 to 100 per cent and 50 showing a decline in prices.

From Table 1 we find that there has been an overall price rise of 196.58 per cent, which means that the drug prices have nearly trebled during 1980 to 1995. The maximum rise of 336 per cent is seen in drugs meant for treatment of cancer. The radical cure for gout is allopurinol and the price of Zyloric has gone down by 79 per cent. All these anticancer products are imported and the government should make an effort to see that these emergency essential drugs are imported and marketed at reasonable cost to consumers.

This is followed by anti-allergic drugs showing a 259 per cent rise. The cheapest chlorpheniramine maleate is just not available, though over 20 brands use it in their combinations. The price of the popular brand Avil (costing total Rs 2.92 for 1 tablet thrice a day for seven days) has marginally increased, but the drug has been rapidly replaced by costlier brands such as astemisole (Astelong 1 week treatment Rs 35.80), terfenadine (Histerf – Rs 45.95), loratadine (Lorfast – Rs 27.65), clemastine (Tavist – Rs 61.10), and cetrizine (Zirtin – Rs 17.15).

Drugs acting on the respiratory system have registered a rise of 258.45 per cent and the maximum rise is shown by cough mixtures. Drugs acting on the alimentary system show a rise of 243 per cent, and strangely enough, inessentials like enzymes (334 per cent), anti-diarrhoeals (476 per cent) and laxatives (300 per cent) rise is seen. This is followed by other inessential nutritional products which show a 236 per cent rise. Food products show a rise of 654 per cent, followed by minerals with 265 per cent, anti-obesity drugs with 193 per cent, vitamins with 186 per cent and tonics with 185 per cent rise. Hormones, most of which are needed by women, show a rise of 221

per cent. Thyroid treatment is taken for a long time and these products have gone up by 532 per cent; gonadol hormones by 409 per cent. Among the drugs for the musculo-skeletal system, inessentials like rubefacients (balms) and muscle relaxants have gone up by 280 per cent.

Only antibiotics have shown a very modest rise of 64 per cent, but few of these antibiotics are very widely used today. The prices of chloramphenical products (Chloromycetin, Paraxin, etc) have gone up, but even this antibiotic has been replaced by ciprofloxacin and others. The newer antibiotics are introduced with higher prices and these are extensively and vigorously promoted.

From Table 2 we find that the maximum rise of 476 per cent is shown by anti-diarrhoeals, wherein a substantial rise of 768 per cent is seen for Salazopyrine which is probably the only available remedy for ulcerative colitis. This is closely followed by Thalazole (574 per cent) and Walamycin

(296 per cent). Now most of the antidiarrhoeals have been banned and thus Streptomagna and Thalazole have been withdrawn. Hepatobiliary drugs follow with a total rise of 355 per cent. Hepasulfol containing trithioparamethoxyphelylpropene (a passing reference is made to it in Martindale, as a drug increasing saliva and bile and not included in British National Farmulae) shows a rise of 602 per cent. closely followed by Festal (an enzyme preparation containing bile salt) by 400 per cent. Festal is now being sold with a changed composition - the bile salt has been dropped and the product named Festal-N with the same price. Enzymes show a rise of 330 per cent. Panzynorm, an enzyme combination containing bile and stomach extract, has registered a rise of 1112 per cent. Bilamide is a brand of nicotinamide and indicated for anorexia, flatulence, dyspepsia and constipation, shows a rise of 552 per cent. This is then followed by Bestozyme (416

per cent), Merckenzyme (354 per cent), Molzyme (372 per cent), Unienzyme (397 per cent) and many others. Then comes the laxative group with a total rise of 300 per cent. This is topped by I-so-gel with 593 per cent, Dulcolax with 451 per cent i'ts suppository with 446 per cent, Pursenid -IN by 351 per cent, Cremafin by 311 per cent and others. In the antacids most of the liquid preparations show increased prices and the maximum rise is shown by Disogel. Among gastro intestinal sedatives, Dimol and Epidosin have shown the maximum rise. In this group the inessential drug combinations for hepato-biliary problems and enzymes show a big rise. The prices of commonly needed laxatives have risen by four times. Within a year (March 1995 to March 1996) prices have further increased for Aludrox and Gelucil MPS antacids. Buscopan and Serebantine anti-spasmodics, Dulcolax suppository and I-so-Gel laxatives, Salazopyrine anti-diarrhoeal, Sorbiline and

Stimuliv for hepato-biliary systems and Bestozyme, Digiplex, Dispeptal enzymes.

Table 3 shows comparative prices of drugs used for heart diseases. The total rise is 135 per cent, but most of these drugs are not widely used and recently introduced newer drugs for higher prices are being promoted. In this group the maximum rise is shown by the anti-coagulants that are needed by cardiac patients for a life time. Acitrom, the only available product, shows price rise of 2359 per cent for a 4 mg tablet and 1417 per cent for a 1 mg tablet. In the following

year prices have been reduced - (1 mg x 10 tab @ Rs 18.15 and 4 mg x 10 tab @ Rs 40.60). But even if we compare the reduced prices to the prevailing prices in 1980, we find the rise is 1152 per cent for a 1 mg tablet and 2119 per cent for 4 mg tablet. Uniwarfin shows a modest rise of 608 per cent. Among the drugs for cardiac disorders, Lanoxinpaediatric shows a rise of 579 per cent, closely followed by Natcardine - 251 per cent, and 323 per cent for Mephentin injectible. Among anti-anginal drugs, Angised shows a rise of 548 per cent and Neocar 249 per cent. In the peripheral vasodilators, Arlidin shows a rise of 415 per cent and Nicinal 240 per cent. The role of these vasodilators for cardiac conditions is doubtful. Among the anti-hypertensives, the prices of methyldopa (Emdopa - 136 per cent, Meldopa - 396 per cent) have gone up. Among haemostatics, Gynac CVP has a very limited role to stop bleeding, but it shows a rise of 154 per cent. Premarine is useful in uterine bleeding (dysfunctional) and prices have gone up by 185 per cent. The prices of Persantin, Duvadilan, Ismelin and Nepresol have reduced. Ciplar, Inderal, antihypertensives, Adelphae essidex, Emdopa have further increased over prices during 1995-96, whereas Inderal 10 mg, Lanoxin injectible, Angised, Acitrom have shown a decrease in prices. The price of Lanoxin tablets has increased during 1995 to 1996 to Rs 4.16 registering a rise of 357 per cent. The highly priced new entrants like Conversyl (10 tabs @ Rs 220.60), Inocor (20 ml @ Rs 933.00), Norpace (100 mg x 10 tabs @ Rs 37.74), Flavedon (10 tab @ 98.93) have shown varying rises during 1995-96.

Table 4 gives the comparative prices of the drugs acting on central nervous system, i e, pain-killers, fever-reducers, hypnotics, sedatives, anti-depressants, anti-nauseants, anti-convulsants, etc. In this group the total prices have trebled. The maximum rise of 335 per cent is shown for drugs used in Parkinsoism, closely followed by a 301 per cent rise for anti-convulsants used for epilepsy, 269 per cent for hypnotics, and so on. Among analgesics, the maximum rise of 182 per cent is shown by Micropyrin, a brand of aspirin. Veganin another aspirin combination shows a rise of 178 per cent. Injection Fortwin and Sosegon show a rise of 174 and 163 per cent, respectively. Calpol and Crocin, the popular brands of paracetamol show a rise of over 100 per cent. In this group, Calpol tablets, Cosamoi syrup, Crocin syrup, Fortwin injection, Micropyrin, Novalgin injection, and pyrigesic have shown a further rise during 1995-96. Hypnotics show an overall rise of 269 per cent. Trickryl shows a maximum rise of 502 per cent and it further increases to Rs 38 (from Rs 33 in 1995), during 1995-96. Gardenal, the drug of choice in epilepsy, has not been available through retail chemists (and the drug controller cannot do anything about its nonavailability) and has shown a rise of 177 per cent. Among sedatives and tranquillisers, the prices of brands of diazepam (Calmod 824 per cent, Calmpose 471 per cent and Valium 582 per cent) increased, but dropped marginally during 1995-96. Larpose is a brand of lorazepam which is a short acting benzodiazepam that has shown a rise of 344 per cent. Librium is a brand of chlordiazepoxide which is a henzodiazepam with general properties similar to diazepam, has shown a rise of 408 per cent. Majeptil is a brand of thioproperazine which is similar to chlorpromazine (a very cheap drug) but is highly priced with a rise of 1070 per cent. This group shows a total rise of 204 per cent. whereas the anti-depressants show a rise of 218 per cent. Anti-emetics totally show a modest rise of 64 per cent, but popular brands like Stemetil (708 per cent) and Siguil injectible (414 per cent) are on the higher side. Anti-convulsants are mainly used by epileptics, for whom phenobarbitone is a good cheap drug, but is not made available by retail chemists and instead costlier newer drugs are used which have registered a big rise, viz, Epsolin-590 per cent, Eptoin-402 per cent, Garoin-311 per cent and Mysoline 552 per cent, with a total rise of 301 per cent.

The total rise in the rigidity and tremor control drugs is nearly 335 per cent, nearly 41/2 times. These drugs are used by patients of Parkinsonism and these have to be used for a long time. Kemadrine has increased by 505 per cent and Pacitane by 611 per cent. Table 5 gives a comparative sales rise of drugs acting on musculo-skeletal disorders. In this group the non-steroidal antiinflammatory drugs (NSAIDs) have shown a minimum rise of 46 per cent because most of these NSAIDs are not widely used and these are replaced by newer and costlier drugs. Muscle relaxants have shown an appreciable rise of 281 per cent which means that the prices have multiplied nearly four times. Carisoma shows a rise of 512 per cent and it has further increased the price during 1995-96. Carisoma contains carisoprodol and British National Formulary (No 29, March 95, page 402) says "The clinical efficacy of carisoprodol as muscle relaxant is not well established although it has been included in compound analgesic preparations (Carisoma compound)". Epidosin is an antispasmodic and is useful in visceral spasms and it shows a rise of 427 per cent. Carisoma compound, an analgesic combination, has increased by 299 per cent, Parafon (a brand of chlorzoxazone) a risc of 283 per cent, Robinax (a brand methocarbamox, the efficacy of which is not established) tablet and injectible by 245 per cent, Rubefacients are topical analgesics that principally act by causing irritation. These as a total have

increased by 207 per cent. Algipan, a type of balm, has shown a rise of 404 per cent, whereas Medicreme a rise of 255 per cent and Relaxyl of 208 per cent. Most of these preparations contain mephenesin, absorption of which through skin is doubtful. Relaxyl has retained the same name and added the word gel (Relaxyl Gel) and contains dicolofenac diethylammonium.

Table 6 gives hormone prices and shows a total rise of 214 per cent. In this group the drugs acting on the thyroid show a maximum rise of 532 per cent. Proloid is a thyroglobulin, a thyroid extract, shows a

rise of 834 per cent, whereas the popular brand Eltroxin shows a rise of 545 per cent and has further increased the rates during 1995-96. Neo-mercazole shows a rise of 359 per cent and has further increased during 1995-96. The gonodal hormones have a total rise of 412 per cent. Lynoral 0.01 mg estrogenic hormone claims a rise of 1681 per cent (nearly 18 times) and Lynoral 0.05 mg a rise of 1116 per cent. Aquaviron, a brand of male hormone shows a 897 per cent rise. Orgalutin is an estrogen-progesterone combination used for dysfunctional uterine bleeding and it shows a rise of 822 per cent.

Mixogen, a combination of estrogen and testosteron indicated for menopausal syndrome, shows a rise of 677 per cent. Testanon, a brand of testesterone (male hormone) rose by 603 per cent. Duphaston, a brand of progesterone shows a rise of 472 per cent. Duoluton was a combination of norgesterl 0.5 mg and ethinyl estradiol 0.05 mg per tablet and in 1985 21 tablets cost Rs 4.75. In 1995, newer brand Duoluton-L replaced norgesterl with levonorgesterl 0.25 mg and 21 tablets cost Rs 25.39, a rise of 435 per cent. Of the 29 hormone products in 1980, 17 products have been discontinued

treatment of diabetes have a total rise of 147 per cent. Maximum rise is registered by Diabenese 100 mg-352 per cent and 25 mg - 378 per cent, and 475 per cent by Rastinon. Insulins have registered a rise of 170 per cent, but now the use is shifted to a costlier brand of purified human insulin.

In the genito-urinary group of drugs diuretics have shown a decrease in total price by 3 per cent, whereas the drugs acting on the uterus by 23 per cent. Spermicidals have registered a rise of 432 per cent, local and systemic drugs by 221 per cent and urinary antiseptics by 171 per cent.

Table 7 gives the comparative price rise of drugs acting on the genito-urinary system. The total rise is only 97 per cent because diuretics have shown a decline of 3 per cent and drugs acting on the uterus, a decline of 23 per cent. Deflen a chemical barrier for contraception shows a rise of 432 per cent, closely followed by local and systemic drugs by 221 per cent and urinary antiseptics by 171 per cent. In the diurectics Hythalton shows a rise of 596 per cent and Lassix a rise of 134 per cent. In the urinary antiinfectives, Pyridium, a urinary tract analgesic shows a rise of 429 per cent. This has further shown a rise of 51 per cent, making a total rise of 699 per cent since 1980. Mandelamine shows a rise of 233 per cent, Gramoneg 223 per cent and Wintomylon 195 per cent. Among local and systemic drugs Dienestrol cream has taken a rise of 1,134 per cent, Hamycin by 526 per cent, Triple Sulpha cream by 396 per cent. Ingagen-M (a rise of 357 per cent) and Pitocin (a rise of 224 per cent) are drugs used during labour. Thus all the products in this group take a rise of 132 per cent.

Table 8 shows a total rise of 59 per cent in the case of anti-infective drugs because there is a reduction in the prices of sulphonamides, anti-TB drugs, anti-leprotic drugs. In the sulphonamide group the popular brands of Septran and Bactrim tablets prices have reduced, but the suspension and syrup prices have marginally increased.

Antibiotics show a rise of 106 per cent. wherein the maximum rise is shown for Bistrepen (702 per cent). This is a combination of Streptomycin and penicillin and a demand is being made to ban this combination. Chloramphenicol brands have shown a rise as Chloromycetin 467 per cent, Paraxin 233 per cent and Reclor 241 per cent. Erythroxycin a brand of erythromycin 100 mg shows a rise of 190 per cent, while 250 mg shows a rise of 210 per cent. Gentamycin (Biogracin, Garamycin, Genticyn), Doxycycline (Duracycline, Lydox) show a decline in prices. Klox a brand of cloxacillin (injectable) has registered a price decrease and for capsules a price rise of 96 per cent and syrup by 108 per cent. Long acting penicillin Penidur LA 6 increased by 223 per cent, LA12 by 211 per cent and LA24 by 198 per cent. Pentids, a brand of oral penicillin has gone up by 264 per cent for 8 lac units, 213 per cent for 4 lac units and 184 per cent for 2 lac units. All others are in the range 100 to 150 per cent rise.

Among anti-tubercular drugs there is a total reduction of 0.66 per cent and that of anti-leprotics of 2.44 per cent. The reduction in anti-tubercular drugs is due to drastic reduction in price of Tibrium (rifampicin). Ambistryn, the brand of streptomycin injection has gone up by 502 per cent for 1 g vial and 457 per cent in 0.75 g vial. Other drugs (Erbazide 119 per cent, Ina-Pas tablets 180 per cent, granules 185 per cent, Isonex 100 mg 164 per cent, and 300 mg 186 per cent) have shown price increses, but these drugs are hardly used now. In the anti-

leprotics the price of Hansepran (Clofazirnine 100 mg) has marginally reduced (from Rs 184.50 to Rs 180.90), but has gone up to Rs 211.20 during 1995-96. Anti-fungals have shown a big rise of 259 per cent and Hamycin shows 526 per cent, Mycostatin 342 per cent. In the anti-amoebics the price of Aristogyl (metronidazole 200 mg) has been reduced from Rs 4.06 to Rs 3.75 and has increased to Rs 4.63 during 1995-96. The price of Dehydroemetin 30 mg injection increased by 225 per cent, 60 mg by 195 per cent; Enteroquinol has shown a price increase by 257 per cent and thus a total rise of 71 per cent. Among anti-malarials Nivaquin tablets has shown a price increase by 209 per cent and injection by 164 per cent. Prices of Resochin have gone up by 307 per cent and the total rise is 192 per cent. Among vaccines there is big rise in anti-snake venom by 587 per cent, Diphtheria antitoxin by 118 per cent and gas-gangrene antitoxin by 193 per cent, taking the total rise to 326 per cent.

Table 9 on nutrition shows a total rise of 225 per cent. Maximum rise of 659 per cent is seen in food products, minerals and nutritional additives with 229 per cent, anabolics by 221 per cent, drugs for obesity by 193 per cent, vitamins by 184 per cent, iron preparations by 155 per cent and tonics by 148 per cent. Bayer's tonic shows a rise of 317 per cent and further increased in 1995-96 to a total rise of 508 per cent. Kinetone by 306 per cent and Neogadine by 273 per cnt. In the iron preparations Dexorange by 360 per cent and further rise during 1995-96 making a total rise of 427 per cent. Hepatoglobin by 304 per cent and Iberol liquid by 302 per cent. In the minerals

and nutritional products Calcium Sandoz injectable with a rise of 614 per cent, followed by Hermin liquid by 433 per cent, Electral by 320 per cent, Calcinol-F by 409 per cent, Sharkoferol by 299 per cent. The total rise is 228 per cent. Vitamin products show a rise of 184 per cent, with vitamin A products like Aquasol tablet going up by 390 per cent, injectables by 334 per cent, Arovit tablet by 394 per cent, injection by 212 per cent, and drops by 489 per cent. Vitamin C prices have gone up - Cecon 500 drops by 285 per cent. Celin 500 mg tablet by 295 per cent, 100 mg 346 per cent, Citravite tablets by 413 per cent, Redoxon 500 mg tablet by 252 per cent, Sukcee tablets by 465 per cent and all other combination vitamin products by 100 to 300 per cent. There were only two antiobesity products, viz, Flabolin that has gone up by 108 per cent whose prices have further risen by 31 per cent in 1995-96 and Ponderax by 297 per cent. Anabolics, though really not needed have shown a rise of 220 per cent. Durabolin 25 mg has gone up by 272 per cent, Deca-Durabolin by 171 per cent and Orabolin by 266 per cent. Strangely enough food products have shown an overall total rise of 659 per cent, wherein Protinex shows a rise in price of 488 per cent - Protinules 277 per cent, Sanatogen 887 per cent and Syu 316 per cent. The prices of all these products have further risen during 1995-96.

Table 10 gives the details of respiratory products, that show an overall rise of 202 per cent. Marax, a combination of ephedrine, theophyline and a tranquiliser shows a rise of 416 per cent, Allupent injectible 363 per cent, the syrup by 462 per cent and tablets by 327 per cent, Tedral SA by 337 per cent and others ranging from 122 to 212 per cent. Expectorants show a rise of 300 per cent (that is four times) Selvigon tablets 653 per cent, drops 493 per cent, Cosome 428 per cent Tuxyne tablets 401 per cent, Sudafed tablets 429 per cent, and Actifed 329 per cent. Among liquid cough mixtures Benadryl expectorant shows a rise of 301.53 and has further gone up during 1995-96 - Selvigon by 399 per cent, Triominic by 356 per cent, Tristina by 395 per cent and Zeet by 344 per cent.

Table 11 gives the details of products used in ENT specialities – with a total rise of 217 per cent, and the maximum rise being in Fenox nasal drops by 489 per cent, throat products by 75 per cent. Ear drops show a total rise of 85 per cent, Chloromycetin by 225 per cent and Waxolve by 213 per cent.

Table 12 shows the price rise of eye ointments and drops. Anti-infectives have shown a total rise of 80 per cent – chloramphenicol preparations have shown a big rise of 204 per cent for Chloromycetin applicaps (further increased by 21 per cent in 1995-96), Paraxin applicaps 257 per cent. Another anti-infective sulphacetamide drops

has gone up – Albucid 104 per cent (1980-96 – 186 per cent), Locula (30 per cent by 201 per cent (1980 to 96 – 298 per cent). Clearine a brand of naphazoline anti-inflammatory shows rise of 371 per cent. The drops for glaucoma have shown a big rise of 161 per cent – Carpo-miotic a brand of pilocarpine shows a rise of 354 per cent, Pilocar by 475 per cent. Biomiotic, a combination drug has gone up by 179 oer cent — in 1995-96 it has further gone up by 113 per cent making for an overall rise of 493 per cent.

Table 13 gives us a comparative picture of anti-allergic drugs. There has been a total rise of 264 per cent in their prices. Vallergan forte - a rise of 564 per cent, Bendaryl capsules of 562 per cent, Hepasulfol of 519 per cent, Foristal of 380 per cent, Dilosyn of 321 per cent, Mebryl of 262 per cent, Calculuvin by 241 per cent, and others. The prices of Phenergan tablets had gone up by 130 per cent and syrup by 147 per cent. During 1995-96 Pheneragan tablet price have risen from Rs 1.93 to Rs 4.35 and syrup from Rs 9.37 to Rs 14.52 thus making a total rise of 617 per cent for tablets and 282 per cent for syrup. Prices of Benadryl, Calciluvin and Dilosyn have further risen during 1995-96

Table 14 gives the price rise in skin ointments by 181 per cent. K Y sterilised lubricating jelly used for rectal and vaginal (internal) examination shows a rise of 887 per cent and has further risen in 1995-96 making a total rise of 1203 per cent. Caladryl by 472 per cent and Siloderm by 441 per cent. Both these product have further risen during 1995-96. In the keratolytics price of K-5 hair tincture has give up by 349 per cent. Cotaryl by 313 per cent and Dorabin by 271 percent. In the anti-fungals Mycostatin shows a price rise of 314 per cent, Ascabiol of 268 per cent, Multifungin of 200 per cent and Pragmatar of 176 per cent. The remaining three products show a rise of less than 100 per cent.

Among anti-infectives (antiseptics), there is a total rise of 149 per cent – the maximum rise of 225 per cent is in Nebasulf ointment, 223 per cent for Dettol riquid, and all others 100 to 158 per cent. Prices of all these products have increased during 1995-96. The steroids products have shown a price rise from 50 to 100 per cent and two less than 50 per cent – Ultralan, a brand of fluocortolon shows a rise of 457 per cent. In the miscellaneous skin preparations Hirudoid shows a price rise of 316 per cent.

The maximum price rise appears to be in drugs used in metabolic disorders, i.e., in cancer – the total rise is 336 per cent. Particularly carcino chemotherapeutic agents (cancer drugs) show a total price rise of 417 per cent. Puri-Nethal, a drug for acute leukemia (blood cancer) shows a price rise of 783 per cent, Leukeran, a drug for ovarian and breast cancer of 1925 per cent (it has

further risen during 1995-96 by 106 per cent, making a total rise of 4066 per cent). Myleran, a drug for leukemia shows a rise of 1778 per cent (and a further rise in 1995-96 making a total rise of 2292 per cent), Mustine, with a rise of 595 per cent. The only price reduction is in Vincristin. Among immunosuppresants, Imuran, a drug used for rheumatoid arthritis unresponsive to other drugs, shows a price rise of 223 per cent with marginal 13.35 per cent rise during 1996. The price of Zyloric, the only brand of allopurinol for gouty arthritis has been reduced from Rs 57.88 to Rs 12.04, a reduction of 79 per cent. Again the emergency drugs used for treatment of poisoning show

a total price rise of 351 per cent. Strangely enough Glutaneurol (a brand of L-glutamic acid, reference of which is not found in BNF and only a passing reference in Martindale) shows a price rise of 553 per cent. BAL injection is used for metal poisoning and it shows a price rise of 397 per cent. Most of the drugs for metabolic disorders are imported and particularly those for treatment of various types of cancers and for treatment of poisoning should be reasonably priced. Though these drugs may not be falling within the DPCO criteria, the government must see that these emergency drugs are made available at reasonable rates and see that the prices do not go on increasing five to 40 times.

## Left Ideology, Ends and Means and Hindutva

#### Romesh Diwan

I GET my copy of the EPW by surface mail so that by the time it reaches here the events have already taken place. Reading the commentary 'On Election Eve' in various issues of March, after the elections are over, is educative. What impresses one is how erroneous are the assumptions and understandings of these writers. They don't seem to have any idea of, nor seem to care about, facts. Naturally, these writings could, and did, not predict the future even two months ahead. Through the general elections people rejected both Congress and Leftist parties and further strengthened BJP; a party anathema to most EPW political commentators.

These writings, like many other political commentaries in EPW, have the standard leftist bias. There was a time when this bias was a badge of honour since it reflected the writer's concern for the poor and the underprivileged. Unfortunately, it has now become a formality and part of dogma Like Dhritharashtra, many have become blind to facts. They are preoccupied with searching damnable adjectives for Hindus and BJP and have missed grasping the reality. Unhappily for them, the United Front (UF) government has now exposed the character of Left parties and their leaders for all to see, thereby placing these intellectuals in the unenviable situation of having to defend and explain their actions. By not understanding facts, these commentators have done a great disservice to themselves and have become irrelevant to their readers by misinforming them and to the institution, the EPW, by compromising its legitimacy. What can be done?

The basic problem lies in the very nature of Left ideòlogy. It is limited, irrational and flawed. It begins with something very moral and pure; a concern for the weak and their exploitation. It is this concern that sets it apart from the centrist - and rightist ideology that exalts exploitation - well camouflaged - and considers the suffering of the weak a small price to pay. There is always a question if an idea/ideology helps the poor. There are two simple tests: (i) is this idea divisive or unitive? and (ii) Do the leaders have integrity? Left ideology is divisive and got lost en route because it doesn't recognise the fundamental interrelations between ends and means. As Gandhi said, "Socialism is as pure as crystal. It, therefore, requires crystal-like means to achieve it. Impure means result in an impure end." Lack of clarity between ends and means follows from the fact that the Left ideology is, in the last analysis, a variant of the materialist rationalist/scientific thought; and is limited by it. The materialist rationalist thought is expressed on the horizontal axis defined by power relations; the Left ideology is the left variant on this axis. Individually, ends or means can be identified on this axis but not ends and means together; or relations therein. Ends and means together span a vertical scale. Life is ordered and so are ends and means that deal with it. Reality lies on the vertical axis and cannot be classified into right and left. Left concentrates on the horizontal plane and is unable to look up so that a good part of reality eludes it. To deal with reality, means are important. Ends cannot be separated from the means.3 To quote Gandhi again, "They say, 'means are after all means'. I would say means are after all everything. As the means, so the end. There is no wall of separation between means and ends. Indeed, the Creator has given us control (and that too, limited) over means, none over the ends. Realisation of the goal is in exact proportion to that of the means. This is a proposition that admits of no exception."

The materialist/rationalist paradigm excludes mean-ends-relationship. Accordingly, it requires, and uses, enormous force – for exploitation and resulting violence – to change the reality so as to conform to the paradigm. This has been the thrust of all imperialist/colonial/slavery systems. Left ideology accepts this violence and attempts to articulate the need for a countervailing power base for the exploited. It does not question the need of violence in the first place.

As the end-means-relationship become relevant, the nature of analysis and policy changes fundamentally. In fact there is a paradigm shift and an inversion. The emphasis shifts from ends to means, from rights to duties. The old cultures highlighted means; personal integrity rather than the power base. Gandhi placed so much importance on 'trusteeship'.6 Among many American-Indian nations membership to the ruling council required one to give up everything he/she has amassed over life time.7 The imperialist societies considered these nations uncivilised; therefore, worth the genocide by a so-called, self-proclaimed civilised society.\* The idea of renunciation is deeply entrenched in the Hindu mind. "The national ideals of India are renunciation and service" says Vivekananda. When asked to sum up his life in three words, Mahatma Gandhi quoted, "tena tyaktena bhunjita" from the first verse in Ishopanishad.10 This is the only tradition, country, and religion where the mighty kings with immense power for violence bowed before the pious and the pure, the renunciate swamis. These ideas come from time immemorial 11 and have been carried on in every age by highly evolved beings; recently by such as Mira Bai, Kabir, Nanak, Ramkrishna, Vivekananda, Gandhi and more recently by Hindu spiritualists like swami Dayanand, Murari Bapu, etc. They deal with 'means' and not 'ends'.

The spiritualist paradigm, first articulated by Gandhi and now promoted by BJP in terms of Hindutva, recognises not only 'good ends' but also the idea that 'ends are contained in the means'. Good ends follow from good means and can't come from bad ones. The ends are well articulated in Vivekananda's statement, "Him I call a mahatman whose heart bleeds for the poor, otherwise he is duratman...In Europe it is everywhere victory to the strong and death to the weak. In the land of Bharata, every social rule is for the protection of the weak."<sup>12</sup>

The spiritualist/Hindutva paradigm, being vertical, is fundamentally different from the materialist/rationalist paradigm defined in the horizontal space. The most important difference lies in the approach to the question: how to provide defense to the exploitable, poor, vulnerable, and weak members of a group or society? The Left ideology operates within the paradigin of power relations and attempts to develop a countervailing power base for them. There is nothing in this ideology to ensure that (i) the countervailing power will prevail and (ii) they will not become the exploiters. The historical evidence suggests that this ideology when put to practice has created a new class of exploiters. This is the basic failing of the left ideology. It is unable to achieve its goal even when its proponents gain power and follow the desired policies. As is now well documented, the sufferings of the poor, vulnerable and weak people in Bihar and Uttar Pradesh, be it dalits or Muslim, have gone up, not down, during the rule of Janata Dal governments whom the intellectuals of the Left have admired and defended.

The defence of the vulnerable group requires spiritualist/Hindutva ideas where means are valued and result in defining duties rather than rights. In this paradigm, it is the duty carried on by A that ensures the rights of B. Once. H G Wells had drawn up a charter on the 'Rights of Man' and sought Gandhi's opinion. Gandhi sent him the following cable: "Received your cable. Have carefully read your fire articles. You will permit me to say you are on the wrong track. I feel sure that I can draw up a better charter of rights than you have drawn up. But of what good will it be? Who will

"peceine its drawnian in hon west buobstanes or popular education you have begun at the wrong end. I suggest the right way. Begin with a charter of duties of man (both D and M capitals) and I promise the rights will follow as spring follows winter. I write from experience. As a young man I began life by seeking to assert my rights and I soon discovered I had none not even over my wife. So I began discovering and performing my duty by my wife, my children, friends, companions and society and I find today that I have greater rights, perhaps than any living man I know. If this is too tall a claim then I say I do not know anyone who possesses greater rights than I."13 To do one's dharma not only does one need a different way to look at the issue but also a strength of character. In the Hindutva paradigm, the emphasis, therefore, has to be, and is, on character, on the ability and willingness of the person involved to do the right thing because it is his/her dharma/duty. Since exploitation is adharma, it becomes the dharma/duty of both the exploiter not to exploit and of the exploited not to co-operate with the eploiter. That is why the BJP manifesto places so much significance on

It is this emphasis on character that is so fundamental to the Gandhian and BJP concept of Rama Rajya. It is rule by a man of character/integrity who follows dharma even at the high cost of personal suffering. Many western trained intellectuals have not understood this basic idea. They have distorted this concept by defining it as a oneperson rule and removing from it the very essential feature: person's character. One does not have to have a high IQ to recognise that given the choice, people will prefer Rama Rajya to any other form of rule. After all Rama wins the heart of people; why wouldn't he win a fair election? Who would contest an election with him anyway?

Given the recognition of means, of duties and character, it follows logically that the exploited, the poor, the vulnerable, the weak will automatically gain and their weakness resolved. People become poor and weak because they are continuously exploited. To exploit them, there has to be exploiters who gain from such exploitation and accept that such exploitation is ethical. If exploitation is not ethical and persons of character will not do unethical things, there will not be exploiters. The exploited will gather strength so as to non-cooperate with exploiters. If the exploiters don't exploit, exploited don't cooperate with the acts and processes of exploitation, exploitation ceases, the institutions that promote exploitation withers away, and there is little need to develop rationalisations for its advantages. The exploited, the poor, the vulnerable and the weak gain back their defence. This is the promise of Hindutva philosophy and ethical system. It is also a natural outcome of Rama

Rajya. It is not surprising that Gandhiji talked so much about it. Unfortunately, some of his friends and followers were so mesmerised by the personal gains from exploitation and exploitative systems that they wouldn't move in this direction.

The 1996 Indian general elections have marked a new watershed. A No party got a clear majority which meant an exposure to all political parties thereby initiating a highly educative process. Not only did the Congress lose its majority, there is now a growing confirmation and corroboration on the general perception that Congress is made up of corrupt political leaders.

The 15-day BJP government provided a searchlight on the party; its ideas, ideals and leaders. The party and its leaders came out with flying colours. It has gained further respect of and trust from the Indian populace. As the Marg survey shows, the stock and popularity of BJP has gone further up: a majority don't consider BJP communal, would have liked Vajpayee to be the prime minister and did not want a UF government.15 The Times of India survey further confirms these facts. In spite of concerted efforts by media and the earlier government, in the BJP's image has improved because of the personal integrity of its leaders and the quality of Hindutva ideals.

The formation of the United Front government has focused on left ideas and leaders. Both have been found wanting. According to Maneka Gandhi, a member of the Janata Dal herself, there are 18 plus criminals in the UF cabinet. The UF and Congress leaders seem to be comfortable in their company. If the Congress government was corrupt, this one is criminal. The nature of their crimes is appalling; one minister, now out, is accused of raping poor young tribal girls, the vulnerables the government is supposed to defend. Hopefully, these criminals don't, and should not, reflect the groups they come from and represent, Muslims and dalits. Yet the Left ideologues have in the past talked highly of these and are now stuck with the task of justifying, and explaining, such criminal behaviour. Anyway they lose legitimacy. Their writings now sound erroneous, deceptive, even deceitful, irrelevant, vacuous and certainly wrong. Many of these ideologues are ritualistic; not unlike idol worshippers. They are lost in their own rhetoric; far removed from reality. The idols they worship have turned out to be false and their temples are withering away. Such ideologues are on their way out. There are others, in the left, who are genuinely concerned about the poor and the weak. They have to re-examine their ideas and concerns. If they do, they may be surprised, like M N Roy at the end of his life,17 to find reverence for their Hindu heritage and commonality with Hindutva ideas and

#### **INDIAN BRANCHES**

#### SCHEDULE 17—NOTES TO ACCOUNTS

#### 1. PRINCIPAL ACCOUNTING POLICIES

#### 1.1 General

The accompanying financial statements have been prepared according to the historical cost convention, except premises of the bank which have been stated at revalued amounts. They conform to generally accepted accounting principles and to the practices prevailing within the banking industry in India.

#### 1.2 Foreign Currency

- a) Assets and Liabilities in foreign currencies, except deposits from Non-Residents held under Foreign Currency Non Resident (A) and (Banks) schemes, are translated into Indian Rupees at the rates notified by FEDAI as at the balance sheet date. Resultant gains or losses are taken to the profit and loss account. Transactions during the year are converted into Indian Rupees at the rates current on the date of the transaction. The balances held under Foreign Currency Non Resident (A) Deposits scheme are valued at the rates specified by the Reserve Bank of India from time to time, whereas, balances held under Foreign Currency Non Resident (Banks) Deposits scheme are stated at the rates at which they were originally sold, with the costs of forward exchange cover for such deposits being spread over the period of the contracts.
- b) Outstanding Forward Exchange Contracts as at the balance sheet date are revalued at the rates notified by FEDAI for specified maturities and at extrapolated FEDAI rates for longer maturities. The resulting profits/losses are included in the profit and loss account
- c) Contingent liabilities in respect of Forward Contracts are stated at contracted rates where available, and at extrapolated FEDAI rates as above, in other cases.

#### 1.3 Investments

a) Investments in Government and Approved Securities:

Permanent Investments:

Permanent Investments are valued at cost of acquisition, adjusted for the premium which is amortised over the residual period to its maturity. Profit on sale/redemption of permanent investments is transferred to capital reserve, whreas the loss is charged to profit and loss account.

Current Investments:

Current Investments except Treasury bills are valued at lower of cost of acquisition and market value. Treasury bills are valued at carrying cost which includes discount accrued over the residual period to its maturity.

b) Other Investments

These are valued at lower of cost and market value. Commercial Paper and Certificates of Deposits are valued at carrying cost which includes discount accrued over the residual period to its maturity.

c) Market Value

The market value in case of securities for which quotes are not available has been determined on the Yield To Maturity(YTM) method in accordance with the yield pattern determined by the Reserve Bank of India. Losses on revaluation of investments are charged to the profit and loss account, whereas profits on revaluation are ignored.

#### 1.4 Fixed Assets

All fixed assets except premises are stated at historical cost less accumulated depreciation. Premises, have been revalued on 31st March, 1993, and are stated at the values as determined by the firm of valuers, less accumulated depreciation. The surplus arising on revaluation has been credited to Property Revaluation Reserve Account.

#### 1.5 Depreciation

Depreciation on the fixed assets of the Bank is provided on the straight line method and on those of Travel Related Services (TRS) division, on the written down value method. The rates of depreciation are as prescribed by Schedule XIV to the Companies Act, 1956, except for Furniture & Fixtures of the Bank, and Improvements to Premises, where higher rates have been adopted in accordance with the estimated useful economic lives. Depreciation on revalued assets is provided for on the revalued amounts and charged to profit and loss account.

#### 1.6 Advances

Advances are stated net of loan loss provisions in respect of identified advances and provision for doubtful interest. Provision for loan losses is made in respect of identified advances based on a periodic review as per the Bank's policy which also satisfies the provisioning guidelines issued by the Reserve Bank of India.

1.7 Income Recognition

Interest income is recognised on an accrual basis except in case of non-performing advances, where it is taken to profit and loss account on realisation.

1.8 Retirement Benefits

Provisions for gratuity, pension and retirement leave encashment benefits to staff have been made on the basis of actuarial assessments.

1.9 Provision for Taxation

Provision for taxation has been made based on the 'liability method' of accounting which is generally followed in India.

(INCORPORATED IN THE U.S.A. WITH LIMITED LIABILITY)

#### INDIAN BRANCHES

#### 1.10 Net Profit

The net profit disclosed in the Profit and Loss Account is after:-

- a) the effect of revaluation of "investments" (see paragraph 1.3 above)
- b) provisions for loan losses (see paragraph 1.6 above).
- c) provision for taxes on income in accordance with statutory requirements.
- d) other usual and necessary provisions.
- 2. In accordance with the instructions received from the Reserve Bank of India, the assets and liabilities related to, and as appearing in the books of, the Travel Related Services Division, after adjusting the accumulated loss, have been shown under "Other Assets" and "Other Liabilities".
- 3. The Foreign Exchange Dealers' Association of India guidelines on conversion of foreign currency balances, forward exchange contracts, etc., which are approved by the Reserve Bank of India, are mandatory and hence these have been followed in preference to Accounting Standard 11—"Accounting for the effect of changes in foreign exchange rates" issued by The Institute of Chartered Accountants of India.
- 4. The Capital to Risk Asset Ratio as at March 31, 1996, as assessed by the Bank, on the basis of the guidelines issued by the Reserve Bank of India, is 8.98%.
- 5. All balances with other overseas branches of the Bank and the Head Office have been grouped in the appropriate heads of account.
- 6. Figures for the previous year have been regrouped and reclassified wherever necessary.

# AUDITORS' REPORT ON THE ACCOUNTS OF THE INDIAN BRANCHES OF AMERICAN EXPRESS BANK LIMITED UNDER SECTION 30 OF THE BANKING REGULATION ACT, 1949

We have audited the attached Balance Sheet of the Indian Branches of American Express Bank Ltd. (Incorporated in the U.S.A. with limited liability) as at 31st March, 1996 and the related Profit and Loss Account for the year ended on that date annexed thereto, in which are incorporated the transactions of the Office of the Chief Executive Officer and the transactions of Travel Related Services Division in India.

In accordance with the provisions of Section 29 of the Banking Regulation Act, 1949 read with the provisions of Sub Section (1), (2) and (5) of Section 211 and Sub Section (5) of Section 227 of the Companied Act, 1956, the Balance Sheet and Profit and Loss Account together with the mores thereon, are not required to be and are not drawn up in accordance with Schedule VI of the Companies Act, 1956. The accounts are therefore, drawn up in conformity with Forms A and B of the Third Schedule of the Banking Regulation Act, 1949.

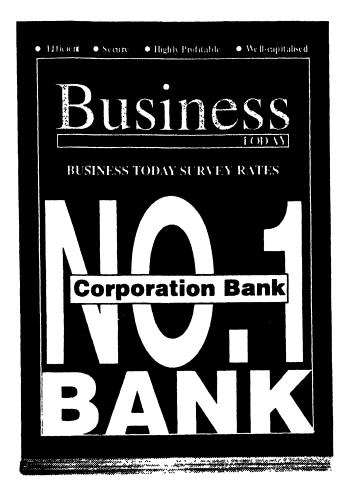

#### We report that:

- a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit, and have found them to be satisfactory.
- b) In our opinion, proper books of account as required by law have been kept by the Indian Branches of the Bank so far as appears from our examination of those books.
- c) The Balance Sheet and Profit and Loss Account of the Indian Branches of the Bank dealt with by this report are in agreement with the books of account.
- d) The foward exchange contracts have been revalued at the year end in accordance with Accounting Policy 1.2 in Schedule 17 and the resultant gains or losses have been recognised in the profit and loss account in line with the Foreign Exchange Dealers' Association of India guidelines. This policy is not in accordance with Accounting Standard 11 "Accounting for the effect of changes in foreign exchange rates" issued by the Institute of Chartered Accountants of India. The impact of such deviation is not quantified.
- e) In our opinion and to the best of our information and according to the explanations given to us, the said accounts read with notes thereon, give the information required by the Companies Act, 1956, in the manner so required for Banking Companies, and subject to para 'd' above, give a true and fair view of the state of affairs of the Indian Branches of the Bank as at 31st March, 1996 and its profit for the year ended on that date.

For and on behalf of KALYANIWALLA & MISTRY Chartered Accountants

## Secularism and the Hindu Right

The recent series of Supreme Court judgments in cases against elected representatives of the Shiv Sena-BJP government in Maharashtra has delivered a mixed message. While finding several of the accused guilty of corrupt electoral practices, the court has given legal sanction to the Hindu right's ideology of hindutva as well as to its discursive strategy of hijacking secularism for its own unsecular agenda. An examination of the Supreme Court's decisions in detail and how it has erred in failing to take into account the political context in which the concepts of Hindutva and secularism have been evolved by the right.

## **Budget 1996-97**

The share of capital expenditure in total government spending has been slipping and the tax reforms have failed to improve the income elasticity of the tax system. In order to keep the economy on a high growth path direct measures to boost savings and public investment are required, both of which call for a new thrust to economic policy management that is missing in the 1996-97 Budget.

260:

Though many concessions have been given in the 1996-97 Budget to the private sector (including foreign capital), investment and especially the inflow of foreign capital remain uncertain. Even to maintain the current level of investment more and more concessions may be needed. This creates inequity and problems for resource mobilisation which worsen the budgetary position leading to further slowing down of public investment and impairment of the government's capacity to fight poverty. Market-based solutions to increase investment activity also cause economic fluctuations to increase, resulting in a premium on speculative activity.

2609

Finances of the Government of India: Special Statistics.

2634

#### **Quick Decline**

Popular discontent over the performance of the Deve Gowda government is gathering rapid momentum. The UP election may well turn out to be catalyst to precipitate a crisis.

2584

#### Pacification of Kashmir

Armed militancy may have been contained in Kashmir for the time being and a brutalised population compelled to seek temporary relief. Yet, neither have the people given up their aspirations to be 'azad' nor will the assembly elections provide a democratic solution to the problem.

2585

The Srinagar-Leh or the Srinagar-Jammu relationship is not any more equal than the Delhi-Srinagar relationship. That is a neglected aspect of the politics of Kashmir.

2583

#### Master Race

The Zionist state of Israel has been one of the world's most adept practitioners of ethnic cleansing. 2592

#### **Pre-empting Protest**

Data on the effects of unemployment, underemployment and low paid employment in the US reveal a strong tendency for the downwardly mobile to direct their anger inward. This behaviour is aided by the major political parties, the mass media and academic publicists who point to the inevitability of globalisation, the virtues of market competitiveness and nced for labour flexibility - all of which presents the problem of the individual victim as the product of impersonal forces beyond her/ 2594 his control.

#### Article 356 Rides Again

The imposition of president's rule in Gujarat emphasises once again the urgent need for either scrapping or at least drastically modifying Article 356 of the Constitution. 2588

#### **Targeting Immigrants**

Recent legislative moves in the US indicate that immigrants are increasingly becoming the scapegoats of choice for politicians in Washington. 2590

## LETTERS TO EDITOR

## 'Overestimating' Saving

IN indulging in the familiar sport of RBIbashing through your edit 'Overestimating Saving' (June 15), you gave a misleading picture to your readers that the methodology followed by the Reserve Bank of India (RBI) while presenting the household saving in terms of bank deposits for 1994-95 was a deviation from the past procedure and that, as a result, there was an overestimation of saving. The argument implied in the edit is that differences in scheduled commercial bank deposits as between the last days of March (i e, March 31) should be taken, and the household sector's holdings of such deposits be worked out on the basis of survey results. The RBI did exactly follow this procedure till 1987-88. But in 1988-89, the procedure was changed and the differences in the deposits as recorded on the last reporting Fridays (LRFs) of March were taken for working out the household sector's holdings of deposits. This was done because data available as of LRF were found to be more reliable. This was first effected in the Reserve Bank's Annual Report for 1988-89. Since 1988-89 the methodological procedure implied in this switchover to LRF was followed without any deviation. Had the editor consulted the director of the EPW Research Foundation, who was himself associated actively with the said Annual Report and subsequently with the area of household sector's saving in financial assets till his voluntary withdrawal from the RBI, the readers would have been spared the misperceptions that your edit has created.

Let us be clear about the fundamental issue here. The EPW edit implies that the methodology followed by the RBI for 1994 95 is deliberate when it argues that the RBI has shifted from the ideal methodology (of taking March 31 data as the basis) in respect of 1994-95, which has 27 reporting periods The EPW forgets to inform the readers that the RBI has been following the methodology based on LRF data for several years. Pray, why? It in fact feigns ignorance of this switchover. One can well question the LRFbased methodology but that is not the point that EPW edit is labouring. Having shifted to the LRF-based methodology, what could any one possibly do, if the LRF happens to be March 31 and the financial year has 27 reporting Fridays? If March 31, 1995 is not taken because of the year-end bulge of deposits and c edit, and instead the data of March 17, 1995 are considered, how will one treat the period March 17 and March 31, 1995? Will it be considered as part of 1995-96, in which case one will get 27 reporting periods

in 1995-96. Going by the present methodology, the household sector's financial saving rate would decline in 1995-96 in view of the high base, but this does not mean that the outcome in 1995-96 could be attributed to the estimation of 1994-95, as implicit in the *EPW*'s edit. All this is not to say that the present methodology should be continued for ever. The LRF-based methodology was followed for seven years till 1994-95 and *EPW* has not raised a whiff of an opposition to it. Why, this sudden awakening?

A VASUDEVAN

#### Mumbai

[The Reserve Bank is, of course, not to be blamed that its estimate of household saving in the form of bank deposits in 1994-95 covered 27 fortnights instead of the usual 26 What it can be charged with, as it was in our editorial, is failing to make explicit that its data grossly exaggerated household saving in the form of bank deposits in 1994-95 compared to the previous year both because of the period covered comprising 27 fortnights and because of the March 31 bulge in bank deposits on account of window-dressing by commercial banks and other factors. -Ed]

## **Collapse of Left**

MY heart too sank like Aijaz Ahmed's ('In The Eye of the Storm: The Left Chooses', June 1) as news came that the CPI(M) was about to join the government! A dwarfed dignity and a complete collapse of the Left movement: Communalism, in other words

BJP, is not the main problem. Gruesome soulless poverty, unemployment, exploitation — in other words bourgeois social economy is the fundamental and urgent question. And the matter brooks no delay — with one caution, haste is no speed.

As a Muslim from U P with the heart-rending experience of Karachi Ahmed should have understood it better. BJP does not represent 'Hindutva' nor the general interests of the Hindus, but upper-caste class interests. Ordinary, middle class people are afraid of 'anarchy', but do not at all want the stability of the existing inhuman social order. The conscious and the advanced sections have come to understand that 'When order is disorder, disorder is the beginning of justice'. For the poor illiterate people of India, class struggle alone is the university.

It seems Aijaz Ahmed has a predilection for a broad sweep of thought, or not so much of thought as of the pen. He confuses primary and secondary issues. And I am reminded of A H Chough's poem.

I do not like being moved: for the will is excited:

and action

Is a most dangerous thing; I tremble for something factitious,

Some malpractice of heart and illegitimate process;

We're so prone to these things, with our terrible notions of duty.

Of all the people under heaven's high cope They are most hopeless who had once most hope,

The most beliefless who had most believed.

PROBODII CHANDRA DUTTA

Calcutta

# **BOP Blues**

F the assessment of the Reserve Bank of India's Annual Report, 1995-96 is to be believed, the country's external sector situation has never been so good in terms of both the current trends and the prospective outlook. But the RBI is clearly over-anxious to prove the success of the government's stabilisation and structural adjustment policies. Last year, even before the ink had dried on the RBI's Annual Report proclaiming the remarkable stability of the rupee, in turn supposedly reflecting the fundamental strength of the country's balance of payments, there was a precipitate fall in the value of the rupee. Again, when the RBI positioned itself against market intervention on the argument that the exchange rate should reflect market forces, the turbulence in the exchange market got worse and the rupee touched Rs 37.94 per dollar in early February, bringing the RBI under pressure to intervene in the market, which it did in a variety of ways, though it now claims that these were no more than "tactical interventions consistent with the fundamentals".

On the surface, the BOP waters seem calm enough just now Foreign currency assets (including SDRs) did suffer a loss of \$ 3,690 mn in 1995-96 from \$ 20,816 mn to \$ 17,126 mn due to rapid import growth and the play of expectational factors encouraged by the RBI's initial stance of non-interference in the market which resulted in holding back of receipts and hastening of payments leading to, what the RBI now calls, a "free fall" of the rupee both in the spot and forward markets The RBI's forced exchange market operations resulted in net sales of foreign exchange of \$ 1,682 mn between October 1995 and February 1996. But soon thereafter remittances improved and in the next four months the RBI made net purchases of \$ 2,214 mn. Foreign exchange assets have continued to rise thereafter and as of September 13 they were \$ 18,298 mn, showing a rise of \$ 1,172 mn since the end of March. The exchange rate also has not shown any significant weakness after the February upheaval, ranging between Rs 34 and Rs 35.75 per dollar. In trade-weighted terms, while the nominal exchange rate at 39.17 (base 1985=100) was 12.8 percent lower than in March 1993 (when the rupee is claimed to have been in reasonable equilibrium) the effective exchange rate in real terms was 4.9 per cent

But while there may be no cause for anxiety for the present, it would not do to ignore the many latent sources of vulnerability as the authorities seem to be doing. Take the behaviour of the export-import sector this year so far after three years of accelerated growth. In dollar terms, the rate of growth of exports as per DGCI and S data (at \$ 10.837 mn) has slumped to 11.5 per cent in April-July 1996 from 27.7 per cent in the

comparable period last year (at \$ 9,724 mn) and an average growth of about 20 per cent per annum in the past three years. While official agencies remain unshaken in their conviction that a genuine and sustainable uptrend in export growth is firmly in place, it should not be surprising if the moderate growth this year sets the trend for quite a while till a fresh bout of 'export promotion' by the government happens to coincide with an acceleration of world trade growth. Exports had grown by 14 per cent per annum in dollar terms between 1985-86 and 1990-91, suggesting that a certain export potential had been built up. Export growth in the past five-year period, on the other hand, works out to a little less than 12 per cent per annum. The rise of 20 per cent per annum in exports in the last three years occurred in the wake of a significant recovery of world trade, the rate of growth of which rose from a range of 3.8 per cent to 4.8 per cent in the three years 1991-93 to 9 per cent in 1994 and 8.7 per cent in 1995. In the next two years, however, the growth of world trade is expected to decelerate.

There are some fundamental factors in the structure of our economy and in the government's policy framework which come in the way of the economy reaping the benefits of growth of international trade fully and on an enduring basis. Most important, a substantial expansion of the production base for exports cannot take place until the rates of domestic saving and investment go up significantly, of which there is no sign. As a result, shortage of investible funds and, more significantly, the exceptionally high rates of interest are curbing the growth of industrial investment and production. The 12 per cent rise in the index of industrial production in 1995-96 is unlikely to be sustained in 1996-97. Significantly, the sharpest decline in the rate of growth of exports this year has been in industrial goods. During the April-June quarter, exports of agricultural and allied items grew by 66.6 per cent compared with 19.4 per cent in the corresponding period of 1995, but exports of ores and minerals grew by 7.4 per cent against 35.5 per cent and of manufactured goods by 4.6 per cent against 28.9 per cent last year (this of course includes gems and jewellery, exports of which have suffered due to reduced demand in the industrialised countries).

In a situation of reduced export growth, the high import propensity of the economy may turn out to be, as in the past, an important source of external sector instability. No doubt, this year so far (April-July) imports at \$11,920 mn show a slower growth of 6 per cent compared with 39.2 per cent last year, thanks to the 2.4 per cent decline in non-POL imports which is reflective of subdued industrial activity. Once the normal import propensity begins to assert itself, the growth of imports

is unlikely to be as low and the trade deficit is sure to widen.

It needs to be noted in this regard that because of significant data revisions and inconsistencies it is difficult to make an accurate assessment of external sector trends. While there have always been some differences in data on imports and exports. particularly imports, between the DGCI and S and the RBI, these differences have grown very large in the last two years. As per DGCI and S data, total imports in 1995-96 were \$ 36,370 mn showing a rise of 26.9 per cent over the previous year's \$28,654 mn, whereas as per RBI data imports were \$41,405 mn in 1995-96 showing a rise of 30 per cent over \$ 31.840 mn in 1994-95. Thus the RBI figure exceeded the DGCI and S one by as much as \$ 5,035 mn. In the preceding two years too the difference was \$ 3,186 mn in 1994-95 and \$ 1,763 mn in 1993-94. Taking account of differences in exports, which have not been so large, the trade deficit as shown in the RBI's BOP data is found to be twice or near-twice that as per DGCI and S data -\$ 8,938 mn against \$ 4,539 mn in 1995-96. \$ 4,983 nin against \$ 2,324 mn in 1994-95 and \$ 2,386 mn against \$ 1,068 mn in 1993-94. There was a time when these differences were attributed mainly to import of defence equipment and of civilian aircraft, which may have played a role in recent years also During the recent period, exchange rate fluctuations may have tended to exaggerate the valuation differences between the two sources - the RBI using the average exchange rates for a month and DGCI and S the exchange rates as reported by the nunistry of commerce in advance with revisions only once in three months. There are two areas where the import data in the RBI's BOP enjoy alead in payments. First, when imports are made on suppliers' credit or when machinery and equipment imports are made on a cash basis the RBI records as imports the advance payments made for such imports, whereas the DGCI and S records the capital goods only when they actually arrive. Similarly, in the cases of imports under external assistance or those under commercial borrowings, the RBI incorporates them when payments are made and thus takes a lead in recording as compared with the DGCL and S

Major differences in data occur also between the RBI and the ministry of finance. Only a couple of months ago, the new finance minister had indicated in his *Economic Survey 1995-96:* An *Update* that the merchandise deficit was \$ 7,015 mn, but the figure has now been placed by the RBI at nearly \$ 2 bn higher at \$ 8,938 mn. Differences occur in relation to other items as well - for example, not private transfers in 1995-96 are shown at \$ 7,480 mn in the RBI data and at \$ 6,150 mn in government data

Be that as it may, there is no doubt that the pressures on the external sector are slowly building up. Fears about the vulnerability of the external sector stem also from the casual manner in which the government is talking about replacing debt flows with non-debt creating flows, as though the latter impose no cost on the economy. The logic of a liberal policy on foreign capital is to augment resource inflows on the capital account and to expand exports of goods and services on the current account and thus minimise the country's balance of payments constraint. If, given the strategy that India has pursued recently, portfolio investment by FIIs of \$ 10 bn, \$ 4.8 bn of FDI actually received and nearly \$ 20 bn of FDI approved up to May this year do not inspire confidence that the cost of servicing these inflows will be offset by increased export earnings from these investments, there can be little hope of any enduring resolution of the balance of payments constraint on the development process Foreign direct investors have focused overwhelmingly on the domestic market rather than on exports. Foreign direct investment may in the event actually exacerbate the foreign exchange constraint. In the first place, under a liberalised import regime the import content of production of foreign companies would be higher and, if they do not focus on exports, the net outgo on account of imports of goods and services in respect of FDI-based projects will be significant and growing. Second, the servicing cost of both FII investment and FDI, including royalty payments, will be substantially larger than the servicing cost of even commercial borrowings. Payments under 'investment income' in the BOP have already reached \$ 5.5 bn in 1995-96 against \$ 4.1 bn in 1990-91 and \$3.8 bn in 1992-93. This may turn out to be as serious a source of destabilisation of the external sector as an unsustainable level of debt.

WOMEN'S BILL

## **Not History, Surely?**

THE tabling of a bill reserving seats for women in parliament and its relegation to a parliamentary subcommittee for reconsideration are both significant markers in the charting of women's rights in the structures of democratic institutions in the country.

The bill aim, at a constitutional amendment to Article 330 stipulating that "not less than one-third of the total number of seats filled by direct election to the House of the People (Lok Sabha) shall be reserved for women (including the number reserved for SC/ST women) and such seats may be allotted by rotation to different constituencies in a state". A parallel legislation is Article 332A amending the reservation for SC/ST which

provides that of the seats reserved for SC/ST candidates one-third are to be reserved for SC/ST women. If these provisions come into force then there would be a minimum of 18( women in the Lok Sabha against 76 today While the idea has been bandied about for some time, no political party has given in serious consideration. Even the present government's approach has been cautious it has been stressed that the bill after all is ar extension of the provisions in the 73rd and 74th constitutional amendments which provide for reservation of seats for women a the local government level. Having tabled it the UF government refused to ensure its passage by what has appeared to observers as deliberate mismanagement. It was also clear that the bill had not been sufficiently discussed among the members of the ruling front No groundwork seems to have been done before the bill was presented, nor, it has beer suggested, had sufficient care and though gone into the drafting of the bill. In the event the government was persuaded, rather willingly, to refer the bill to a select com mittee before any discussion on it could take place. It is hard to believe that the UF government's parliamentary tacticians had no anticipated just such an outcome. Ir other words, having ensured that a 'historic move had been recorded, the UF governmen let it slip into oblivion, even if temporarily

What has been remarkable is the level o discussion and debate on the bill. Nobody parliamentarians, political parties or ever women's groups by and large, appears to have been prepared for the move. At one level, women parliamentarians have reported the level of the responses in the central hall of parliament. The taunts and the unsubtle sexist remarks that have been made 'ir private' suggest that to political parties and most of their leaders, the issue of women's rights is largely a matter of how much political mileage may be obtained from it without it being allowed to infringe on existing privileges and powers. On the other hand women's groups and activists with their long experience of how the state has been adept a accommodating certain demands withou actually integrating these into the structure of its institutions, have been justifiably cynical about the bill as well as its future course. Interestingly, the experience at the local government level has been quoted by both those for and against the bill. At the panchayat level, while it is a fact that more women have now entered decision-making bodies, in a number of states studies have found that these women are often proxies fo male contestants at the elections.

But the issue clearly needs to be looked a from a long-term perspective. There is no gainsaying that legislating for women's representation in decision-making bodies does not automatically ensure their in

volvement in their functioning, no reven that gender-sensitivity in governance and policymaking will be an inevitable outcome. However, Indian legislative history is full of instances where laws have prompted articulation of needs - in fact that would appear to be more the norm than the exception. The problem with such legislative change has been that they have been more or less deliberately so constructed as to limit the benefits which they profess to provide. The opportunity provided by its detailed consideration by a parliamentary committee must be used to ensure that the bill to provide for reservation for women in parliament is not attenuated in this fashion.

#### **RANCHAYAT RAJ**

#### Kerala's Initiatives

Nirmal Mukarji writes:

KERALA's experience in decentralisation has been of the one-step-forward, two-steps-back variety. Every past government in the state that tried to decentralise somehow fell. This had the effect of making parties on both sides of the political divide nervous about grasping this nettle when in power. In this context the decentralising measures taken by the present government of Kerala in its very first hundred days are noteworthy.

The previous UDF government had taken two retrograde steps. The first was when, soon after coming to power in June 1991, it amended the District Administration Act in such a way as virtually to disempower the district councils that had at long last been elected only a few months earlier at the instance of the predecessor LDF government. The second was when, under the compulsion of the Constitution (73rd Amendment) Act, 1992, it passed a wishy-washy Kerala Panchayat Act, 1994, which did meet the constitutional requirement in letter but utterly failed to do so in spirit. Thus, while it helped to bring elected village, block and district panchayats into existence, it left these 'institutions of self-government' without anything worthwhile to do. In order to remedy this highly unsatisfactory state of affairs, the present government, within six weeks of taking office, set up a committee to suggest how local bodies, both rural and urban, could be enabled to function autonomously in their respective domains. The committee is headed by S B Sen, a former deputy chairman of West Bengal's planning board, who brings with him the wealth of his home state's pioneering experience with panchayats their strengths as well as their weaknesses. The committee's recommendations, expected later this year, cannot but lift Kerala's panchayats and municipalities from the rockbottom level at which they are now.

The other measure that the present government has taken is to reconstitute its planning board, bringing in the noted economist, IS Gulati, as its deputy chairman. The new board has quickly resolved to decentralise the planning process in Kerala, with at least 35-40 per cent of the Ninth Plan to consist of schemes formulated and implemented by the local bodies, i.e. panchayats and municipalities, within their respective areas of responsibility. In order to empower these bodies to undertake this task in a scientific and participatory manner, the idea was conceived of a People's Campaign for the Ninth Plan, and the campaign was formally launched on August 17. There is a high-level Council of Guidance headed by EM S Namboodiripad and composed of leaders of political parties, vice-chancellors of universities, heads of centres of excellence and leaders of mass movements. The Council has a panel of vice-chairmen consisting of the present and former chief ministers, opposition leaders and eminent academicians. What is commendable in this innovative idea is its emphasis on the people as the primary actors. Equally praiseworthy is the effort to involve all political parties. Hopefully, this will minimise the danger of a future government of another political hue backtracking. It is to be hoped that the intended decentralisation is not negated by backdoor re-centralisation, considering that the programme is being run by the state planning board in collaboration with the local administration department, which sounds ominous.

The atmosphere of decentralisation generated by the new government is reflected in a recent decision to encourage panchayats to take up power projects. According to Kerala's minister for power and co-operation, a district panchayat has already come forward to take up a small power project. Also according to him, local functionaries of the state electricity board (KSEB) will be attached to the municipalities and panchayats, where popular committees will review their functioning. The minister has stated that similar committees will be set up to monitor power projects These will have the district collectors, representatives of the people and KSEB officials as members. There lies the rub. Here are committees stiff with collectors and KSEB staff and yet the minister would have us believe that these are popular committees. But let that pass.

On present evidence Kerala seems to be on the way out of the one-step-forward and twosteps-back pattern. For, all the new initiatives so far have been in a forward direction. The question does arise, however, whether they are forward enough Will Kerala be able to break out of the development – only bind that has kept panchayats stunted everywhere all these decades? In his dissenting note to the Asoka Mehta report of the latter 1970s, EM S Namboodiripad had said: "I cannot think of the panchayati raj institutions as anything other than the integral parts of the country's administration with no difference between what are called the 'development' and 'regulatory' functions." This wholistic vision is captured in the phrase 'institutions of self-government' which panchayats and municipalities are now constitutionally required to be. But to quote E M S again: "the ghost of the earlier idea that panchayati raj institutions should be completely divorced from all regulatory functions and made to confine themselves to developmental functions only is haunting [us]." Dare one hope that the S B Sen Committee and the Kerala government will pay heed to these sage words set down 20 years ago by the senior statesman who now heads the Council of Guidance of the People's Campaign for the Ninth Plan? Should, in other words, Kerala not think in terms of a people's campaign for decentralised governance rather than merely for the Ninth Plan? Is it not time to move on from development to selfgovernment?

#### **UTTAR PRADESH**

#### Caste and the 'Kisan'

THE realignment of political parties in Uttar Pradesh on the eve of the elections there suggests an attempt to revive the 'kisan' movement (of rich and middle farmers) that had been lying dormant for quite some time

The mercurial farmer-leader, Mahendra Singh Tikait, after having enjoyed a certain amount of popularity among his caste men in western UP and publicity in the national media some years ago (when his followers besieged New Delhi), had been sulking in obscurity for the last few years. He had been marginalised by other political forces in UP. which since 1989 has seen a succession of governments based on shifting alliances between different parties. The farmers, many among whom had been Tikait's followers, had been dividing their loyalties between Mulayam Singh Yadav's Samajwadi Party (SP) and the Janata Dal. The BJP during its reign in UP from June 1991 to December 1992 had disappointed the farmers by refusing to meet their demands for concessions in electricity rates, among other

Tikait has now struck up an alliance with Ajit Singh, the political chameleon who has been hopping from one party to another, to form a political party called the Bharatiya Kisan Kamgar Party (BKKP) to contest the elections. This suits both leaders. Tikait hopes to revive his declining fortunes among the Jat farmers and Ajit Singh, after his exit from

the Congress, hopes to find a berth in politics through the new party. Tikait's demand for agricultural incentives which stimulates fantasies of a modern rich lifestyle among the farmers and Ajit Singh's evocation of the memories of his father Charan Singh – whose fame as a Jat leader still holds sway among farmers of his clan – are expected to capture the farmers' vote-bank. The BKKP has also tagged itself to the United Front bandwagon in UP, thus hoping to get some support from the OBCs (represented mainly by Mulayam Singh Yadav's SP) among the farming community, primarily the small farmers.

Attheother end of the agricultural spectrum is the Bahujan Samaj Party (BSP) claiming to represent the dalits who form the bulk of the poor peasants and landless labourers. Its leaders, Kanshi Ram and Mayawati, after two rather disastrous bouts of unprincipled alliances — the first with the SP and the second with the BJP — have now tied themselves to the apron strings of the Congress. Here again, both the BSP and the Congress are playing on casteist calculations. While the Congress hopes to rally the Brahmins and upper caste voters (its traditional votebank in UP), the BSP is mobilising its dalit supporters.

These two sets of alliances – the BKKP-UF and the BSP-Congress have been hurriedly knocked up purely to ensure the victory at the polls of their respective candidates. There is no guarantee that the alliances will survive the polls. Once the election results are out, and if none of the alliances gets a majority, a fresh realignmen will follow, with elected MLAs from one alliance walking over to the other in order to form a government and get ministerial berths.

It is obvious that both the alliances are papering overthe basic contradictions among the various segments of the farming community in UP—those between the aspirations of the upwardly mobile rich farmers and of the small-holding farmers; between the interests of these landowning tariners on the one hand and the struggle for sheer survival of the oppressed farm labourers and poor peasants on the other.

The ability of these 'kisan' leaders to continue to thrive on caste loyalties alone and the inability of the class-oriented Left parties to make a dent into the agrarian politics of UP indicate the level of political consciousness among the farming community there. Even after being duped again and again by their leaders – whether a Tikait pursuing his personal ambition or a Charan Singh changing sides to become prime minister – they still cling to their casteist affiliations and remain loyal to these leaders. In this respect the dalits have fared no better. The blatant contradiction between

Mayawati's anti-Manu rhetoric and her alliance with parties like the BJP and the Congress (which she calls 'Manuwadi') in practice either remains totally imperceptible to the dalits or they rationalise such contradictions by asserting the need for caste solidarity.

The farmers and peasants of UP are yet to break out from their traditional caste and clan boundaries, although both are increasingly articulating their respective economic demands and social rights. As a result we find such strange alliances manipulated by their leaders at the top for their personal political interests as that between the Congress-led feudal upper caste gentry and the BSP-led depressed castes who are oppressed economically and socially by the same gentry. What Marx said about the French farmers in the mid-19th century is in many ways applicable to the agricultural community of UP - as well as many other parts of the Hindi heartland; "They cannot represent themselves, they must be represented. Their representative must at the same time appear as their master, as an authority over them, as an unlimited governmental power that protects them against the other classes and sends them rain and sunshine from above."

**GUJARAT** 

## **BJP's Woes**

A correspondent writes:

WHO is to be blamed for pulling down the Bharatiya Janata Party (BJP) government in Gujarat? The BJP is crying foul at the nexus between the United Front Government at the centre, the Congress Party, the governor of Gujarat, Krishna Pal Singh, and the leader of the newly formed Rashtriya Janata Party, Shankersinh Waghela. It can be argued that the on-the-spot recognition given by the deputy speaker Chandubhai Dhabi on September 3 to the splinter group of the BJP and the immediate adjournment of the assembly thereafter, when it had assembled to decide the trust vote on Suresh Mehta's government, was unconstitutional. But the fact remains that ever since Waghela's revolt in October last year against the central leadership of the BJP, and L K Advani in particular, politics in Gujarat was getting murkier and murkier due to the infighting within the BJP, so much so that in the past one month it was difficult to decide whether the state government actually commanded a majority in the assembly

In spite of winning a two-thirds majority in the Gujarat assembly 18 months ago, the central leadership of the BJP committed the mistake of allowing the hardliners of the Sangh parivar to run the state government. Non-Sangh party workers, among whom Shankersinh Waghela and Kashiram Rana were prominent, were sought to be sidelined. The party organisation functioned in an autocratic manner leaving no room for accommodation of the dissidents' view. The Patel lobby, backed by the RSS-VHP, could never digest the humiliation of Keshubhai Patel's resignation from chief ministership as a result of Waghela's revolt. After that Gujarat witnessed politics of vengeance played out in the BJP which culminated in the defeat of Waghela and his supporters in the Lok Sabha elections and the humiliation of senior leader, Atmaram Patel, at a public function by the RSS-VHP lobby. The enthusiastic response to Waghela's rally in Ahmedabad on August 20, after his expulsion from the party, indicated public support for the Waghela faction's claim that it had been unjustly treated by the party leadership.

When Dilip Parikh as leader of the Waghela group requested the governor to give it separate recognition in the assembly claims and counter-claims regarding majority support to the government started to be raised. Soon chief minister Suresh Mehta had to admit that he enjoyed no more than a waferthin majority in the house. Further, by allegedly keeping 16 MLAs incommunicado (they were apparently not allowed to meet even their wives and close family members). making them pledge loyalty to the party in front of Gandhi's statue at Sabarmati and parading them before journalists at a press conference at Gandhinagar, the BJP, instead of strengthening the chief minister's case, gave credence to the view that the most strenuous efforts, including offers of lucrative positions, were being made to keep party MLAs within the fold. Of the 94 MLAs intended to be paraded before the president, 17 were said to have their signatures on the splinter group's list as well. Finally, the violence in the assembly building on September 18 gave the centre the grounds for taking the position that the trust vote in favour of Suresh Mehta could not be considered as a free and fair verdict. All through the crisis, the speaker of the house, H L Patel, could not come to the rescue of the BJP as he was bed-ridden and ultimately passed away on September 17. While the central government's decision to bring the state under president's rule is certainly questionable and goes against the known positions of many of the constituents of the United Front on the use of the centre's powers against state governments in precisely this type of situations, the actions of the BJP central and state leadership over past year and a half largely contributed to the nemesis of the party's government in the state.

Apart from the gentle but persistent rise in the annual inflation rate to near 6 per cent, it is the higher rate of increase than in the preceding 12-month period in the prices of 'food articles' under primary articles as well as 'food products' under manufactures that appears disquietening. Annual inflation as measured by the consumer price index has not shown any significant decline. Thus the slower increase in the prices of manufactured products following incipient recessionary conditions in industry is one of the factors responsible for the continued suppression of the overall inflation rate. Export-import trade growth is experiencing a sizeable deceleration this year, which may also be reflecting the sluggish production activities.

NOCIL

## **Capacity Constraint**

NATIONAL ORGANIC CHEMICAL INDUSTRIES (NOCIL), the flagship company of the Arvind Mafatlal group, is a major player in the petrochemicals industry. It set up the first petrochemicals complex and produces downstream products like ethylene, propylene and benzene. It also produces high density polyethylene (HDPE)

Nocil closed the year ended March 1996 with a sales turnover of Rs 1,015 crore, up by 8 per cent from Rs 936 crore in the previous year Other income moved up by 22 per cent from Rs 46 crore to Rs 55 crore Interest costs rose by 46 per cent Provision for depreciation was down by 17 per cent while that for tax was higher by 61 per cent This increase notwithstanding, the company posted a net profit of Rs 91 crore, up by 22 per cent from Rs 75 crore recorded in the previous year A dividend of 25 per cent has been recommended by the company as compared to 45 per cent declared in the previous year

The company achieved record sales of HDPE, butadiene, ethylene oxide and pipes and fittings for the year under review Sale of petrochemicals and polymers standing at Rs 985 crore was higher than in the previous year forming the major chunk of the turnover while rubber chemicals at Rs 150 crore and plastic products at Rs 70 crore also registered substantial increases in volumes

Though the company registered a 10 per cent growth in sales, there was a slow-down in the growth rate. The major factor responsible for the slow down was that the output of most downstream items from the naphthal cracker plant at Thane in Maharashtra had levelled off. As a result there has been very little increase in output from its downstream plants.

Exports of petrochemicals and rubber chemicals during the year stood at Rs 78 crore. The company retained its status as a star trading house Establishing itself as a reliable long-term supplier of rubber chemicals to tyre companies, its products were accepted in the markets of Japan, Australia, and Europe

Nocil is holding talks with UK-based Hanson group for its modermisation-cumexpansion programme. The company has embarked on a Rs 4,600 crore expansion plan at its Thane plant in Maharashtra but, constrained by lack of funds, has not been able to make much headway. The first phase of the project has been completed with the process design and basic engineering package for its naphtha-based plant. The designs for utility centres related to the plant have also been completed. Nocil is to produce 2.25 lakh tonne per annum (tpa) of

polyethylene, 1 8 lakh tpa of polypropylene and 75,000 tpa of benzene and toulene and 30,000 tpa of ethyloxylates

The project has been approved by the International Finance Corporation (IFC) which is picking up 5 per cent equity amounting to \$ 15 mn IFC has also earmarked \$ 40 mn by way of loans with the remaining to be raised by the Arvind Mafatlal group On the anvil is a Rs 1,600 crore rights issue of non-convertible debentures Besides, the company plans to raise Rs 1,100 crore through external commercial borrowings

Royal Dutch Shell hitherto a co-promoter, has decided to sell its stake in Nocil to the Arvind Mafatlal group. The Mafatlals have merged Polyolefins Industries (PIL) and Nocil, and have spun off the agro chemicals division into a new company, DE Nocil, a joint venture with Dow Elanco of US. The company commenced its operation on April 1, 1995.

**PUNJAB TRACTORS** 

# Triumph of Indian Technology

Promoted by Punjab State Industrial Development Corporation (PSIDC), Punjab Tractors was incorporated in 1970 and commenced production in 1974 using indigenously developed technology. With a 21 per cent increase in turnover in 1992-93, a 16 per cent increase in 1993-94, a year when industry was hit by recession, a 27 per cent increase in 1994-95 when industry volumes went up by 19 per cent and a 26 per cent rise in the year ended March 1996, Punjab Tractors has consistently improved its performance with each passing year

Volume growth in all products, a favourable demand trend and continuous emphasis on cost containment all worked to enable Punjab Tractors to come up with another year of satisfactory performance The company closed the year ended March 1996 with a sales turnover of Rs 455 crore. up from Rs 361 crore in the previous year Other income moved up by 50 per cent Interest costs were down by 79 per cent Provision for depreciation moved up by 20 per cent Restricted by a 59 per cent rise in provision for tax, Punjab Tractors ended up with a net profit of Rs 38 crore up by 42 per cent from Rs 27 crose in the previous year Dividend payment up from 100 per cent to 125 per cent has been combined with a one-for-one bonus issue

PTL makes agricultural tractors in the range of 20 to 55 HP and intends to introduce new models in the 20-24 HP range during the year. The company has an installed capacity of 27,000 tractors in the high power range and commands a 14 per cent share of the tractor market. Sold under the brand

name Swaraj, tractors account for the larger part of the company's turnover

Tractor business grew by 13 per cent during the first half and 22 per cent in the second half of the year under review, harvester combines and forklifts registered a growth of 38 per cent and 60 per cent respectively. Casting production grew by 10 per cent to 5 600 tonnes.

The company has a Rs 100 crore expansion plan which is to be implemented over a three year period starting 1996-97. The plan envisages an increase in production capacity from 36,000 tractors to 60,000 tractors. The funds required for the proposed expansion are to be generated through internal accruals.

In 1995-96 the tractor industry is expecting record sales of 1,90,000 tractors, a growth of almost 16 per cent over the previous year. During the first six months of the year the industry sold 9,100 tractors. On the export front, against an average export of 2,000 tractors per year, the industry expects to export 5,000 tractors during the year.

While PTL has already sold 11,825 of its Swaraj tractors, analysts predict it could manage to reach a figure of 26,500 by the end of the year Competition comes to the company from Escorts which is restructuring its tractor and farm machinery equipment activities. By acquiring Ford tractors, in which it has a partial stake. Escorts is planning to add tractors of high horsepower range. It is also planning a technical collaboration with a leading international firm. Greaves, of the Thapar group is also planning to diversify into tractors by the end of the year.

PTL is the third largest seller behind Mahindra and Mahindra and Escorts Though the company's capacity is small compared to the other two, its tractors enjoy a tremendous brand loyalty in the northern states of Uttar Pradesh, Punjah and Harayana, the reason being the company's highly acclaimed research and development cell PTL has made a beginning by looking beyond its traditional markets by slowly making its presence felt in Madhya Pradesh

The company has built up strong R and D capabilities. In anticipation of further growth opportunities and increasing competition the company set up a new R and D and spare parts complex in 1991. The company has the advantage of a good marketing network of 250 dealers. Another strength of the company lies in its ability to develop models suited to local requirements. The tractors manufactured by the company are made wholly with local technology and know how This results in substantially lower capital costs no royalty payments for technology transfer and no outgo of foreign exchange Engines which account for around 30 per cent of the material costs are procured from Swarai Engines a group company and Kirlosk ir Oil Engines Striving towards zero

defects in production, the company has reduced its warranty cost to around Rs 240 per tractor, the lowest in the industry.

### TITAN INDUSTRIES

## **New Areas**

Jointly promoted by Questar Investments, with Tata Sons, a Tata group company and the Tamil Nadu Industrial Development Corporation in 1987-88, Titan Industries commenced commercial manufacturing at its Hosur unit in 1989. Sales turnover for the year ended March 1996 stood at Rs 323 crore, up by 26 per cent from Rs 257 crore in the previous year. Other income was down by 18 per cent. Interest costs were up by 57 per cent. Provision for depreciation was up by 20 per cent. In the face of a zero tax provision the company closed the year with a net profit of Rs 28 crore, up by 10 per cent from Rs 25 crore in the previous year. Dividend payment has been stepped up from 30 per cent to 33 per cent. The company produced 3.77 million watches and 1.98 million cases. Production would have been higher but for an industrial dispute during wage negotiations at the company's Hosur plant.

Titan's table clock unit with a capacity to manufacture 1.5 million pieces per annum has commenced commercial production. In 1995-96 the company manufactured 93,000 plastic alarm clocks. A beginning was made in the production of premium table clocks.

The company's jewellery plant and jewellery watches plant, both in their first year of production, produced about 40,000 jewellery pieces and around 2,000 jewellery watches in 1995-96. The company's facility to manufacture complex integrated metal bracelets has been established at a cost of Rs 16 crore in technical assistance from a major Japanese company.

To augment exports and diversify into other fields related to its core competence, the company plans to increase its investment in associate and subsidiary companies. Exports of the company increased by 100 per cent crossing Rs 37 crore in 1995-96. A new range of mid and upmarket watches was launched by Titan International Marketing in many parts of Europe. Available in over 750 outlets across many cities in Europe. The company continued to expand its coverage in west Asia where its products successfully compete with other foreign brands. The company has plans to expand its coverage to several African countries during the course of the year.

Titan Industries has an investment plan estimated at Rs 120 crore over the next two years. The company has stepped up its watch movement manufacturing capacity to 5 million pieces per annum. The assembly capacity of the company's unit at Hosur and Dehradun is also being increased.

## One Word Forward, Two Words Back

**GPD** 

The Srinagar-Leh and the Srinagar-Jammu relationship is not any more equal than the Delhi-Srinagar relationship. That is one aspect of the politics in Kashmir which is more often than not ignored.

LENINIST truths come home to roost in a peculiar way. Common Minimum Programme-Comrade (CMP-Com) Indrajit Gupta must have realised it now. He was talking to the BBC. He probably thought that he would be heard only in England. Little does he realise that the greatest BBCpatriots are to be found in India. Anything English is admired here whereas almost anything English is not admired in England. Imagine the newsprint that our newspapers wasted on Prince Charles' marriage or rather to its break-up. One would have almost thought she was Princess of Gwalior rather than Wales. That royal family also has broken up on the lines of a 'communal' BJP and the patriotic, secular force of the Congress/ CMP. (One is not certain if Madhavrao is directly in the battle against communalism or indirectly with other Congressmen. The other faction's interests are clear and well known.) The breakdown of the royal family in Britain, however, dominates our media presumably because Prince Charles and his meetings with so and so are as important if not more important for our media than, shall we say, Deve Gowda's meeting with Thackeray in Mumbai. CMP-Com Indrajit Gupta forgot it in a moment of weakness and made statements to the British media. The result was inevitable. The tactical line has been laid down already. One forward, two backward. If proof were needed that Lenin is not dated, here was one. The honourable home minister 'clarified' what he said. He had taken or at least attempted to take the Indian understanding of the Kashmir issue a word or two forward. He has been forced to quickly retrace his words, if not actually to eat them.

His explanation is neat. An old horse when it comes to polemics, the home minister was not going to be ruffled by the storm his remarks had raised. He was not going to be bullied by his fellow CMP-Comrades of the CPI(M). His explanation seems to have satisfied the latter anyway. The rest of the nation has Prince Charles' married life to worry about. It is not going to bother what this MP from Medinipur has to say on problem A or problem B. Its preferences are clear. There are enough MPs with their cupboards full of notes to talk about. But then what was wrong in Gupta's statement really? He of course says that he did not talk of the partition of Kashmir. Strictly in de jure terms he is right. But when you talk of different regions, you are still talking of a de facto differentiation. And it was a good thing that he did so. It was time somebody

talked of different perspectives on the future (and the past) of that unfortunate state in different areas of that state. At the present moment the leadership in the valley has appropriated to itself the right to decide what is right and wrong for the entire state. It is also futile to ignore the fact that the Muslims of the valley are speaking also for the Buddhists of Ladakh and the Hindus of Jammu and even the Pandits of the valley. All this is in keeping with Islam-based nationalism (and fundamentalism) within the valley. It is idle to imagine that there is such a thing as Kashmiri nationalism. There is Kashmiri Islamic nationalism.

It is extraordinary that it is unfashionable to raise this kind of argument among the left and liberal circles. Stating a sociological reality is for some reason taboo. It is perhaps thought that saying so is to send wrong signals. Wrong signals to whom? Who is deceived by the protestations of various groups in Kashmir that they are speaking in the name of the entire people of the entire state when in fact they are speaking, if at all, in the name of Muslims of the valley? To acknowledge this or concede this is simply to be aware of the ground realities in the state. Such an acknowledgement would amount to a communal position if one were to argue that the state in India has a right to crush these voices even if they are willing to speak in the name of a region in the state because they happen to be Muslims. Not otherwise.

Gupta's position may not be the one outlined above The old-fashioned Fabian

in him would be shocked that we attribute to him a position like the above. We do not. The thrust of what has been said above is only to underline that there are different regions in Kashmir as there are in any other state in India. If Uttarakhand, according to Deve Gowda or the CPI, has the right to assert its autonomy, why not Ladakh or Jammu? Why should it create a storm if the home minister acknowledged the existence of different regions (and people) which make up that state? What is wrong if these different regions and people had a right to self-expression? The fact of the matter is that it is legitimate and right. To say that is not sending any wrong signals to anyone. It is only to start off a process of a sober review of what we wish to do with Kashmir and, of course, with Indian polity as a whole.

It is extraordinary but true that several liberals who seem to be making several trips to the state have not bothered to hear what the Buddhists of Ladakh have to say on the future of the state. They also seem to believe that the valley decides. Once it is accepted that the valley decides even for those who do not live there, one will have to accept that only such democracy and such selfdetermination will be permitted as Delhi allows. Point is the Srinagar-Leh or Srinagar-Jammu relationship is not any more equal than the Delhi-Srinagar relationship. It cannot be. That is one aspect of the politics in Kashmir which is more often than not ignored. There are different regions there and these different regions should have the right to articulate their point of view independently of each other if a just and human solution to that problem is to be

Indrajit Gupta probably did not mean anything more than that. It is good, old-tashioned liberalism. To attack him and his intentions on that score is sending wrong signals, sending wrong signals to the whole world, not only to the people of the different regions of the J and K.

## CHOMSKY'S POLITICS

Marate Ra

Beginning with a concise biography of his subject, Milan Rai presents a sympathetic yet probing analysis of Chomsky's critique of United States' media and foreign policy and his vision of a libertarian socialist future.

Drawing on the entire range of Chomsky's prodigious output, including little-known interviews and articles, Rai examines Chomsky's assault on journalistic self-censorship and business control of the mass media.

It would serve as an excellent introduction for those confronting Chomsky's critique for the first time.

## **Quick Decline of UF Government**

BM

Popular discontent over the performance of the Deve Gowda government is gathering rapid momentum. Those who have been striking brave postures and proclaiming that the government will last its full term, if only because no political party or MP wants to face another general election are being short-sighted. The UP election may well turn out to be the catalyst to precipitate a crisis for the UF government.

IT is remarkable that the government in New Delhi should find it relatively easy to 'manage' the holding of assembly election in Jammu and Kashmir, but the UP assembly election should be seen to be posing higger problems and dangers to it. The response of political bigwigs and senior bureaucrats to any ticklish problem just now is that they would prefer to attend to it after the UP election. There is a 'national consensus' on retaining India's sovereignty over troubled Kashmir. The political-electoral contention in UP, however, is uncompromising, with no holds barred. The results of the UP election, according the consensus among political analysts, will determine the shape of governance in New Delhi.

The political parties which have formed or support the Deve Gowda government have not 'resitated to resile from their pregeneral election ideological and political. commitments. Once the principle of accountability to the electorate was violated, political contention was bound to become unprincipled. This has encouraged shifts in the political alliances of parties and personalities. Political power is necessarily a central issue for all parties and personalities They are also bound to try to consolidate and enlarge their popular base by articulating the interests of their specific constituencies. They cannot any longer afford to let their identities be submerged by pretending, as the Congress Party could for a long time, to enjoy the support of all social and economic interests. Regional pulls and pressures as well as communal, caste and ethnic conflicts are now bringing about political realignments Even the Congress, having lost its political hegemony, has been forced to come to terms with this reality. Indeed this is the justification that the Congress leadership has given for the party's alliance with BSP in UP

It is not surprising either that communal, caste and ethnic pulls and pressures often take virulent forms. The resulting social unrest finds a reflection in policy adjustments and new political alignments. The UF and its government is frankly a stop-gap

arrangement. What will happen once this arrangement falls apart is anybody's guess. The fragility of the UF government is already too evident.

The continuation of the lett parties in the government for long is regarded as doubtful. The increasingly strained relations among the leading lights of the Janata Dal, in particular Deve Gowda, Mulayam Singh and Laloo Prasad, are not fortuitous either. The 'outside' support of the Congress provides the UF government a majority in the Lok Sabha. But it is a political liability as well. P V Narasimha Rao's success in trustrating the fitful attempts of dissidents to dislodge him from the leadership of the Congress Party could not have been possible without 'outside' support extended to him on the basis of reciprocity.

Faction forming and infighting among parties is providing adventurers and shady characters with a field day in politics, in the administration and in business. This trend has gained strength in the last five years and is now assuming even more grotesque features. The UF government headed by Deve Gowda has been unable and unwilling to moderate, let alone curb, such goings on.

Deve Gowda, once he was catapulted to the exalted office of prime minister, has been striving from day one to perpetuate a system of policy-making and administration under his personal control. Besides assembling those he considers personally loyal to him to run the prime minister's office as well other sensitive posts, he has had no hesitation in looking for new allies outside the UF framework. He is keen to outgrow the status of a last-choice prime minister. The problems in his way are formidable. His pol:tical base in Karnataka has become shaky. Nervous about the prospects of getting elected to the Lok Sabha. he has opted for the Rajya Sabha. He knows he cannot rely on the parties constituting the United Front for his survival and his political and administrative moves have tended to be informed by this consideration. His meeting with Bal Thackeray in Mumbai, the distribution of largesse to woo farmers in UP and shady deals with multinational corporations, among them Congentrix in Karnataka and Star TV, have raised many eyebrows. His success in winning over the Tikait-Ajit Singh duo may not yield electoral gains for the UF, but Ajit Singh's defection from Congress to the UF does hurt the Janata Dal. But Deve Gowda is inclined to brazen out of such criticism.

Coalition politics and the running of a coalition government require delicate adjustments and compromises. But the manner in which the leaders of the UF coalition. Deve Gowda in particular, are seeking short-term political and personal gains can be very risky too. The UF coalition's internal cohesion is already suspect. There are problems within each party in the front. The Congress Party, the powerful 'outside' supporter, is blowing hot and cold. Popular discontent over the policies and performance of the Deve Gowda government is likely, therefore, to gather momentum. Those who are striking brave postures and proclaiming that the Deve Gowda government will enjoy a full term, because no party or MP wants a general election, are being short-sighted. The assembly elections in UP may turn out to be the catalyst to precipitate a crisis for the Deve Gowda government.

Problems for the government are certainly piling up. The 'please all' budget for 1996-97 has not helped it. The holding of election in Jammu and Kashmir may be trumpeted as a signal achievement. But its aftermath may turn out to be more problematic because the question of autonomy will come to a head and will pose an intractable problem in the domestic political arena. The relations with regional parties and state governments too are becoming more and more difficult for Deve Gowda. Foreign pressures on political-strategic issues - CTBT, for instance - and on economic matters are growing. The position may become menacing after the US armed action against Iraq, without even the formality of sanction of the UN Security Council. The feeble reaction of the government of India cannot escape critical notice. The arm-twisting of India by the US on economic policy issues is likely to become more visible and further expose the vulnerability of the UF government to external and domestic pressures.

The government has failed to pull the economy out of the doldrums. There are indications of a sharp decline in investment and industrial production. The decline in imports of capital goods and raw materials, fall in the rate of growth of operations of the financial institutions and inability of business enterprises to raise resources from the market in the first quarter of 1996-97 have disturbed the equanimity of even the economic policy-makers in the Deve Gowda

government. It was fondly believed by them that after the Lok Sabha elections and the formation of a 'stable' government, foreign investment would come flowing in to provide a material base and psychological assurance for the economy. This hope has not materialised, though economy is becoming increasingly vulnerable to fluctuations in the inflow of foreign capital.

The revival of industrial production in 1955 has turned out to be ephemeral. Investment is tending to be blocked by the liquidity crunch. Stocks and shares of Indian companies are passing into foreign hands at depressed prices. Moves are afoot to facilitate changes in the ownership of Indian companies to suit foreign business interests, even as wider opportunities are being provided to hot money operators to garner speculative gains for repatriation abroad. A dangerous nexus is developing between holders of black rupees and hot dollars with not only economic but also social and political implications.

The standard response of the elite in developing countries in the wake of such developments tends to be a questionable search for what is euphemistically called a 'national government' – a political arrangement for preserving the economic and social status quo. There is also likely to be a hectic search for a 'charismatic leader' who can

manipulate the polity to impose an authoritarian regime, even if democratic forms may not be demolished altogether. There are many candidates in India who are keen to play this role. They talk glibly of their knowledge of India's problems even though they have no popular base in the country and are heading coteries which they claim to be political parties. The people must become aware of the danger which such self-styled leaders pose. This is necessary for the preservation of the democratic order, not to mention equitable socio-economic development. For long vested interests in the Indian economy, society and polity have been nurtured under an increasingly centralised rule of a party which had identified itself with a narrow upper crust of society. Lately, there is also the direct influence of foreign interests in Indian politics. Besides exposing the corruption of the leading lights in the political arena and isolating such politicians, the people must fight for alternative policies as the basis of a truly democratic coalition for clean politics. This alone can lend strength to Indian democracy, regenerate Indian society and revive the economy. It would be tragic if the lust of political parties, including the Left, for power-sharing in a rickety political arrangement is allowed to thwart a meanigful realignment of political and social forces.

Rs 5,000 for AK-47, and Rs 1,000 for pistol. However, this figure is on the low side according to one report; in south Kashmir alone there are 4,000 renegades ( The Times of India, September 16). There are serious charges levelled against this combined force of killing, molestation, and other atrocities. Union minister of state for home, Mohammed Maqbool Dar, had claimed that in six years of militancy 40,000 people were killed. The minister also complained that the surrendered militants have become "hardened criminals" (The Indian Express, July 17) enjoying official patronage and protection. So widespread is the resentment that Kul Jamat Hurriyet Conference (APHC) which refused to participate in elections so long as India does not accept Kashmir is a 'disputed ' territory and ready to solve the problem in accordance with the wishes of the people, asserts that there is a feeling among people that "an elected government will certainly bring relief to the people. People do want a civil administration that is free of the rule of bureaucrats and security forces." They point out that in the first six months of this year, renegades have killed 610 people, damaged 478 building in blasts and torched 562 houses.

This has resulted in a series of criminal acts. Four persons were caught from the office of Forum for Permanent Resolution at Gogjibagh on July 31 and officials say that they were Hizbul Mujahideen (HM) members responsible for killing six persons abducted from the Dal Lake on July 15. But not only had APHC condemned the act but had also called for hartal on July 19 against the killings. Besides these persons were arrested from the office of surrendered militants (Tribune, August 4). On August 21, correspondent for Pioneer, Fayaz Ahmad Kaloo and editor of Greater Kashmir were kidnapped in the presence of a Business Standard correspondent. Latter followed the abductors to a renegade camp at Hazratbal and then to a BSF camp at Jogi Lankar in Ramawari area of Srinagar. On September 3, four National Conference (NC) workers were killed in a grenade attack on their vehicles at Sopore where an election meeting was in progress. Officials claimed this was the handiwork of HM. While HM refuted the charge, the NC leader Farooq Abdullah accused surrendered militants for the attack. On September 10, CPI(M) leader Yusuf Tarigami accused Ikhwan for attacking people campaigning for him.

However, in spite of the demand raised among others by the NC for disarming the renegades and overwhelming evidence of their terror campaigns, union home ministry refused to comply. Their plea was that these renegades are involved in backup of the counter-insurgency operations and also require arms for their protection. Interestingly, largest renegade group Ikhwan and its political front the Awami League split over the issue of guns, with Awami

JAMMU AND KASHMIR

## **Enthroning Subterfuge**

Gautam Navlakha

Armed militancy has been contained for the time being, and a brutalised population compelled to seek temporary relief; yet, neither have the people of Kashmir valley given up their aspiration to be 'azad' nor will the assembly elections engender a democratic solution.

HOLDING of assembly elections in Jammu and Kashmir (J and K) signifies the restoration of the government of India (GOI) control over the territory without winning over the confidence of the people. Protagonists of Indian nation-state can rejoice at the subjugation of a rebellious people and its antagonists can feel vindicated that nation-state is always brought about violently. Once again those who articulate and struggle for a non-coercive democratic perspective receive short shrift. But while a 'problem' has been suppressed, it has not been resolved. On four occasions in the past - 1947, 1952, 1953 and 1975 - the people of India were made to believe that the problem had been solved. Past seven years shows the vacuity of such claims. Each time coercion was employed to subjugate the people in order that the moment of fatigue could be seized as an opportunity to tighten the grip over J and K. The elections and the 'offer' of autonomy are meant to do the

Elections are being held under the supervision of an incredible force deployment of nearly six lakh jawans of the 'Armed Forces of the Union' - there is one soldier for seven Kashmiris. For the purposes of the holding elections, 50,000 troops have been brought in to man the 2,300 polling stations. This force is supposedly meant to fight armed militants who today number between 1,500 and 2,500. Indeed even at the height of militancy they did not exceed 10,000. In other words, they were meant to police the civilians. Over and above these, there are indeterminate number of progovernment militants. Officials claim that since 1990, 2,047 militants have surrendered. Out of these 784 surrendered after August 15, 1995. Militants are allowed to retain their weapons although existing rules provide for paying them Rs 8,000 for a machine gun, League vice-chairman claiming that Kuka Parrey was "more inclined to use the gun while being in politics".

Between January 1 and August 15, 2,511 persons have been killed. Of these 114 were jawans and 1,062 were said to be militants and rest were civilians, During two weeks in August, 170 persons were killed. Strangely, GOI claims that since 1989 total killings were 15,002 of which 6,985 were militants, 6,822 civilians and 1,195 were security forces. The death count so far in 1996 would suggest that this is grossly underplayed. Officials also claim that since 1989, 31,000 youths were picked up. According to union home minister (August 10) of these 16,000 were released after preliminary investigation, 12,000 released after conviction in cases and only 3,000 remained in custody. This list does not contain the number of non-youth persons detained and what became of them.

It is against this background of use of proxy force, of lawlessness and unaccountability of the administration and security forces that sizeable section of people believe that a civilian government would bring some respite. In other words, it is a triumph of brute power that tyranny of past seven years have made the discredited politicians appear better

Admittedly, differences within APHC have not helped matters. APHC dismissed

Shabir Shah for meeting Frank Wisner and senator Hank Brown. APHC feels that the US is working towards an understanding between India and Pakistan. The role of the US is certainly intriguing with their support for elections and allowing the dropping of Kashmir issue from the mandatory agenda of the security council for reasons of 'overcrowding'. There are other considerations at play and deserve to be analysed. Nevertheless, all this is seen as a setback by the APHC. Significantly, the elections held in Azad Kashmir have also contributed to disillusioning the movement. Now, all this is happening when latest assessment of the government is that there are no more than 1.500 to 2.500 militants of which 300 to 500 were foreigners and that militants are finding it difficult to recruit people. It is at this moment that leadership differences have widened, the inovement for 'azadi' appears headless, and is being pushed underground.

This situation should have enabled the government, if it was at all sincere, to roll back the regime of repression as well as to make some bold announcement regarding autonomy. And if people have reconciled to being an 'integral' part of India there was no need to disallow them access to anti-election campaign. Instead, what we have is the government taking extraordinary measures to purchase the acquiescence of its own employees and muzzle all forms of

dissent. In the first place they offered incentives for J and K staff on poll duty. Daily wage earners, yet to complete prescribed seven years for regularisation as on March 31, 1996, and those who perform poll duty would be considered for regularisation after completing two years of service. Simultaneously, the government cracked down on APHC's anti-election campaign and began censoring local newspapers. On August 22, copies of all Urdu and English newspapers were seized for carrying a statement by Shoura-e-Jehad. an amalgam of five militant outfits, calling for a 38-day strike against the elections. In fact, government went to the extent of ensuring that reporters belonging to the national chains were reminded of their patriotic duty with a reminder that those who do not toe the line will be recalled, as it happened during the parliamentary elections. As a result, media coverage, barring few exceptions, provide similar picture. The crackdown on anti-election campaigns, if at all, appears in passing. Peaceful campaigns of APHC have been disrupted. On August 25 at Baramullah, soldiers belonging to 9th Gurkha Regiment rushed out of their quarters at Khowza Bagh and arrested five leaders of APHC who were undertaking door to door campaign. On August 30, when APHC leaders were addressing a gathering in Kupwara town,

## Swiss TNCs in India Public Interest Research Group

This study analyses the macro-level nature and pattern of Swiss investments in India during the post-liberalisation period (1991-95), as well as the operations of four major Swiss Transnational Companies (TNCs) in India - Asea Brown Boveri, Ciba Geigy, Nestle and Sandoz. Using information based on wide ranging first hand interviews, a variety of printed material and official documents, this study uses the Swiss case to demonstrate many loopholes in the argument that transnationals are the panacea for most of the ills of India.

## Lent and Lost

Foreign Credit and Third World Development

## Cheryl Payer

In this book, Cheryl Payer, challenges our understanding of the origins of the debt crisis. She takes the arguments of orthodox economists and shows how their policy prescription led debtor countries to the most serious depression of the century. It is a devastating critique of the assumption that poor countries are natural importers of capital. Payer argues that this myth merely served to support the export ambitions and Cold War strategies of the US. She believes that the South must break with development strategies that rely on foreign capital.

## Clobalisation and Third World Trade Unions

The Challenge of Rapid Economic Change

Edited by Henk Thomas

This study is the outcome of a series of original investigations into the deep crisis in which the organised labour movement in the South finds itself as a result of changes in the global economy. The regional overviews and illustrative country case studies from Asia, Latin America and Africa show how trade unions currently face a variety of difficult challenges.

security forces chased away the people On the same day, while APHC leaders were addressing a gathering at Helmatpora mosque, two dozen militants entered the mosque and kept them at gunpoint for four hours until police intervened In Pulwama town on September 11, security forces opened fire on an anti-election campaign which began protesting when four APHC leaders were arrested Same day Shabir Shah was picked up by the security forces along with six of his associates from Kulgam area of Anantnag district On September 14 two people died and seven were injured when security forces opened fire on an anti-election campaign And now the administration has decided to detain APHC leaders for the duration of the election campaign arguing that these leaders were threatening the people It is not explained how mere 2 500 militants can threaten an entire population who live surrounded by nearly 300 times the number of security forces? Moreover, why should the government employees strike work since August 24 forgoing their salaries and notwithstanding the fortiess like confines of their offices if not for their sympathy with the call for poll boycott Indeed whereas armed militancy has been contained for the time being and a brutalised population compelled to seek temporary relief they have not given up their aspiration to be azad

The simple fact is that for the administration there is no difference between in aimed inilitant and unarmed civilian who supports the demand for azadi. Decision to muzzle the APHC or censor the news papers when it knows that armed militancy is in decline is premised on making no distinction between armed and unarmed people. Indeed, it is therefore the announce ment by the union home ministry that security forces will remain and are needed even after the elections. This force deployed to restore authority by instilling fear continues to be required to police an alienated population In other words government no matter what it pretends, knows that it has not won over the population What is worse the government appears disinclined to roll back repression and make any sincere move to win over people. Indeed, the interesting point is that they are unwilling to repose faith even in those groups that are loyal to them This is what makes all talk of autonomy a dubious exercise

In the first place so long as AFSPA remains, the state government will exercise no control over the security forces. Thus the pro-India state government will find its authority severely curtailed. This is corroborated by director general of BSF who said (September 15) that the installation of an elected government will not mean any curb on the functioning of the security forces. This makes mockery of the claims to provide autonomy when the state government will have little say over matters of law and order.

Secondly, all laws made by the central government have been done on the basis of

the May 1954 presidential order. One of the orders deleted section 75 of the J and K constitution of 1939 which had made the council of ministers the final interpreters of the constitution From time to time, the president of India has been specifying subjects over which parliament could make laws with the concurrence of the state government Several of these central laws were applied to the state not by an elected government but by the governor in violation of Article 370 which calls for "acting on the advice of the Council of Ministers" Thus, whereas laws that subverted the autonomy of J and K could be enacted with the help of governor, their withdrawal has been made an issue for the elected government to decide! Why did the government not revoke presidential order of 1954 and withdraw various legislations that violate Article 370? And if GOI was sincere, why was autonomous hill council status granted to Ladakh in the absence of elected state government? Besides the riders attached to what will and will not be accepted even if so resolved by the state assembly makes it clear that nothing substantive will come out of this Prime minister told members in the Rajya Sabha on August 2 that it should not be assumed that the union government would blindly" accept suggestion/resolution passed by the assembly Union home minister resterated on August 7 that 'the final decision (on autonomy) will not be taken here (in Srinagar) It will be taken in Delhi The centre has to decide (The Statesman August 8) So what is being offered? It was left to a discredited politician such as Mufti Mohammed Sayced to point out that leaving

it to the assembly to decide the quantum of autonomy is "ill-advised" because "Jammu region has historically stood for integration with India. Ladakh area wants meiger it is only the Valley that disputes the fact of accession with India' Sayeed also felt that the end result would be reviving the plans tor division of J and K. Significantly, Indrant Gupta told BBC that since maximum autonomy was being considered, it is in fitness of things that aspirations of each of the distinct region be respected. According to him security experts had mooted localising the conflict through partition of J and K years ago in order to localise the conflict In other words it is also doubtful whether the assembly will ever pass resolutions that spell out the quantum of autonomy when it is not clear whether a resolution by the state assembly requires the simple majority or two thirds majority in the assembly. Indeed this could become a device to create divisions

Since autonomy is a non-starter, to expect people to want anything other than temporary respite would be to over read the situation In that sense what the government has achieved is to curtail the manifestation of a movement namely militancy whereas the aspirations articulated by that movement remain intact. While autonomy did not adequately address these aspirations, even the promise of autonomy offered by United Front government cannot be taken seriously All this only lends credibility to the desire of the people to prefer the choice of oming out Assembly elections in that sense are meant to postpone the search for a democratic solution if not to short circuit it

# A UNIQUE WORK FROM INSTITUTE OF SOCIAL SCIENCES

# ENVIRONMENTAL SANITATION HEALTH AND PANCHAYATI RAJ

Bakshi D. Sinha and P. S. K. Menon

The All-India study covering ten states and fifteen specific projects is indeed a good effort. The search is for a viable model or models to ensure environmental sanitation, health and panchayati raj.

## President's Rule: Temporary Quiet

Nagindas Sanghavi

The imposition of President's Rule in Gujarat cannot be justified on the grounds that have been given for it. It is an unwarranted act destroying a democratically constituted government in the state, emphasising once again the urgent need for either scrapping or at least drastically modifying Article 356 of the Constitution. In fact the chain of events in Gujarat has shown up every constitutional authority involved in poor light.

THE imposition of the President's Rule in Gujarat is a right step taken for all the wrong reasons. There is no breakdown of law and order in Gujarat and the ministry has obtained a vote of confidence proving thereby its majority in the house, albeit with a lot of arm-twisting. Despite repeated assurances given by the prime minister both in the house and outside, the finale was reached rather swiftly as was expected and even demanded by several participants in this sordid drama. The governor had recommended it, the opposition leader Amarsinh Chowdhari had urged it and Shankersinh Vaghela had hinted at something drastic after the end of the session of parliament. The President's Rule temporarily puts the Gujarat issue in the cold storage, offering no permanent or satisfactory solution to the imbroglio.

A long-simmering and intense power struggle within the Gujarat unit of Bharativa Janata Party exploded in full public view a year ago. Though lulled to quietude, it had never been really settled and its periodic eruptions kept everybody on tenterhooks. The point of no return was reached on May 20, 1996, when after a public meeting at Sardar Stadium in Ahmedabad, prominent leaders of the Vaghela faction were abused and assaulted by party workers; the seniormost amongst them was stripped, physically molested, paraded and bashedup. Instead of punishing the guilty, the party high command pushed the victims into a corner and deprived them of all positions of power and prestige. A defiant Vaghela received the most stringent punishment - of being expelled from the party. The decision of the injured faction to break away and form a separate party converted an intraparty affair into a political issue which rapidly deteriorated into a constitutional crisis hecause a conspiracy of silence kept an embarrassing factor firmly under a wrap.

The crisis in Gujarat revolves around two separate but interrelated clusters of facts converging onto the physical and the mental incapacity or otherwise of the speaker. Operated upon twice within a span of eight months for brain tumour and then subjected to frequent bouts of chemotherapy, the speaker's health became a crucial point in dealing with the political impasse created by the split in the legislative wing of the BJP. The speaker could not attend his office after April and was kept under a strict quarantine. No visitor, not even the chief minister was permitted to visit him. Those who attended him at the Mumbai airport after his second operation in May, affirm that he was not able to recognise even his own wife and was even then only clinically alive. A communique issued in his name but without his signature in the first week of September claimed that he was mentally alert and that all the decisions proclaimed in his name were taken by him and by him alone, on the basis of the papers submitted to him by his staff. The opposition pooh-poohed the claim and alleged that his name and his office were being misused by a coterie around him who guided his hand to sign the various files without his knowing what it was all about. It has been widely reported in the Gujarati press that such signatures often consisted of only the first alphabet of his name in Gujarati script. There was a persistent demand from Gujarat Congress leaders for a panel of doctors to report the actual state of his health, but nothing came out of it.

The political equilibrium in the state has been utterly disrupted by the diametrically opposite and mutually exclusive rulings in several matters pertaining to the validity or otherwise of the split in BJP, issued in the name of the speaker and delivered by the deputy speaker who presided over the assembly and functioned as a speaker in his absence as per Article 180(2).

The split manifested itself in three stages. A memorandum submitted to the governor (August 18) was signed by several legislators announcing their breaking away from BJP and aligning with a newly formed Maha Gujarat Janata Party. Nobody was then aware of the exact number of signatories. The governor rushed to Delhi to consult the prime minister and surprisingly even the ex-

prime minister, and announced the number of signatories to be "significantly substantial". After his return, the governor suffered a mild stroke and was hospitalised. Three days later, 13 persons who had signed the memorandum informed the governor of their return to the mother party and in the next day five more signatories followed suit. All these 18 legislators who had returned were immediately isolated and held incommunicado with a stringency which became somewhat of a scandal. The governor forwarded all the three documents to the legislative secretariat (August 24) and all the signatures on all the three documents were officially certified to be true. The returnees declared that they had signed under duress or were duped into signing the first memo. A few alleged that their signatures had been forged. A criminal complaint has been registered with the police, but the governor has declined to part with the sensitive documents.

The number of signatories and the interval between their submission assume critical significance in view of the Tenth Schedule of the Constitution popularly known as antidefection provisions. If all the stages are telescoped into one, then only 28 legislators have broken away from the party. It is not a split but a few (less than one-third) defectors have left the party and therefore they are disqualified for the assembly membership This was the stand taken in the notification issued by the speaker (August 28). The governor and the deputy speaker declined to concede such telescoping and simply neglected the notification. Both seemed to treat the splitting process by stages - 46 (six more than the magic number of 40, one-third of the party strength) legislators had split from the party to form a new one. After three days there was a split in the splinter group and since the group had only 13 members, they are defectors from MJP. Next day five more MLAs left the new party, but they are also less than one-third of the rump and can be disqualified. If all these 18 returnees are taken as a group, then there is a valid split in the MJP and nobody is disqualified. The only escape route for the returnees would be that when they left MJP it was not a party recognised either by the Election Commission or by the assembly.

The governor, taking cognisance of all such 'goings and comings', asked the chief minister to seek a vote of confidence on the floor of the house. The assembly which was convened on September 3 was discomfited by the deputy speaker who, stepping out of the agenda, recognised MJP with all its 46 members and ordered separate sitting facilities for them. He immediately thereafter adjourned the house sine die defeating thereby its main purpose, namely, to test the strength of the ruling party. The House was

locultoises by use speaker on the senior day at 3:30 pm and several attempts made by the BJP legislators to occupy the chair of the speaker were foiled by the Opposition. The deputy speaker again adjourned the house sine die. Such obstructionist tactics by the deputy speaker deprived the chief minister of an opportunity to demonstrate his majority support in the house. A furious chief minister gave notice for the motion of no confidence in the deputy speaker and decided to convene the house after the expiry of the notice period of two weeks, so that the deputy speaker would be debarred from presiding over the house. The governor for some strange and unexplained reasons, insisted that the vote of confidence ought to be taken on or before September 13 when the deputy speaker would be entitled to be in the chair. The governor, very correctly pointed out his legal incapacity to convene an adjourned assembly, but displayed a very partisan attitude in declining the chief minister's request to send a message to the house which would have prevented the deputy speaker from playing his game once more and would compel the house to decide the issue one way or the other. Meanwhile the speaker had declared the deputy speaker's ruling ab nissi void ('he has no right to do so'). The speaker of the Lok Sabha put his foot in his mouth by supporting the speaker but hastily withdrew his statement by pleading ignorance about the actual position in Gujarat.

The chief minister had no option but to reject the governor's directive and he got the speaker to convene the assembly on September 18. The governor quite unjustly treated the change in date as the breakdown of the constitutional machinery in the state and recommended President's Rule for the state, a recommendation palpably unjustified by facts and invalid by the constitution. The union ministry cold-shouldered the recommendation and no action was taken upon it for the next five days. The speaker died on September 15 thereby further clouding the fortunes of the ministry. Deputy speaker Dabhi became an officiating speaker with full control over the secretariat. The agenda for the assembly meeting on the 18th was the condolence resolutions on the first day and all the remaining business on the next.

By a lucky break for the ministry, Dabhi was indisposed and was hospitalised, giving an opportunity to the first person in the panel of chairmen to preside over the deliberation on the first day. The frustrated leader of the Opposition turned violent and were thrown out of the house with undue and excessive use of force. The panic-stricken chief minister, fearing the probable return of Dabhi on the next day, violated all the precedents, and took full advantage of the absence of the Opposition. The agenda was altered, the

and a vote of confidence in the ministry was passed by 92 votes.

The fast moving train of events shows up every constitutional authority in poor light. The legislators, the legislative secretariat, the deputy speaker, the speaker, the chief minister, the governor and even the union ministry can hardly be absolved of the charge of improper behaviour and blatantly partisan approach. The imposition of President's Rule cannot be justified on the grounds given for it and is an unwarranted act of destroying a democratically constituted government in the state, emphasising once again the urgent need for either scrapping or at least drastically modifying Article 356 of the Constitution. The culprits who dragged the dying speaker into such unseemly controversies must be identified and punished. The deputy speaker's decision to recognise the breakaway group is a legitimate exercise of his powers but he is guilty of wanton obstruction of the chief minister's efforts to seek a vote of confidence from the house. It is interesting to note that though the governor constitutionally heads the legislature (Part IV, Chapter III, Article 168), the legislature secretariat in Gujarat has asserted its autonomy by adopting an independent stance via-a-vis the speaker. While the governor treated him as physically and mentally incapacitated to discharge his duties, the secretary to the legislature has convened the assembly twice under his directions and authenticated several other notifications in his name, treating him as a sick but a competent and functioning authority. But the secretary has overlooked two moot points. It is open to argument whether speaker's runing can be valid if delivered outside the premises of the assembly. Secondly, the secretary has not taken into consideration that speaker's ruling on the disqualification of the memorialists (August 28) violated the established practice as well as the assembly rules framed under proviso eight of the Tenth Schedule of the Constitution.

The Tenth Schedule empowers the speaker to pronounce final and irrevocable decision in the matters of disqualification of the defectors. But Article 180 (2) of the Constitution declares, interalia, that a deputy speaker or any other person presiding over the house "shall act as a speaker". It is not at all clear whether the word speaker used in proviso six of the schedule debars or includes persons discharging such duties as per the above mentioned article. In case of an absentee or an incapacitated speaker, somebody will have to pronounce on any such eventuality. The benefit of the unclear wording should be given to the interpretation which would tacilitate the smooth working of the house. Deciding upon the disqualification is a quasi judicial power of the speaker which does not depend on the opinion of the house. This power is to be exercised in accordance with the directions given in the schedule. All state assemblies, and so also Gujarat, have under Proviso 8-1.d formulated and, adopted detailed rules of procedure the violation of which is tantamount to a breach of parliamentary previleges (Proviso 8.3). Here the speaker himself has violated or at least disregarded the procedural rules and hence he can be held guilty of breach of the privilege. The defectors were given no opportunity to explain their

#### CENTRE FOR STUDIES IN SOCIAL SCIENCES. CALCUTTA

requires for its collaborative ENRECA project a Post-Doctoral Fellow in Economics for a period of three years renewable every year on the basis of performance on a consolidated starting salary of Rs. 6000/- per month with a provision of annual increment plus contingency allowance for research purposes. The candidates should have Ph.D. degree in Economics and sound academic record with specialisation in Industrial Organisations, International Trade and/or Macro-Economics. The candidate will be expected to travel on field trips as and when necessary. Upper age limit is 35 years. Applications with detailed curriculum vitae may be sent to

The Registrar,

Centre for Studies in Social Sciences, Calcutta,

10, Lake Terrace, Calcutta-700029

by October 18, 1996.

case or to account for their stand in the matter. It should also be noted that the legislators whom the speaker disqualified had done nothing in the house to merit any such punishment. A memorandum submitted to the governor is hardly a proper ground for the speaker to act upon, because the speaker, like a judge, should confine himself to the matters presented to him in appropriate manner. Disqualifying a legislator is a long and a tedious process. Jaspal Singh, by defying the whip issued by his party the Janata Dal in the previous assembly was a clear-cut case for disqualification, but it took more than nine months of inquiry proceedings before disqualification could be pronounced. The deputy speaker acted upon the first memorandum presented to the governor to recognise the new party, but neglected the subsequent splits. Parikh's request was not backed by any documents submitted to the house in a proper form. The deputy speaker gave no opportunity to the majority party to have its say in the matter. He also disregarded the agenda of the house in the matter of the vote of confidence in the ministry. The adjournment of the house

sine die was a tactical move, rather than an exercise to uphold the dignity of the house, or to avoid any untoward mishap. Since the rulings of the presiding authority are not subject to appeal or revision, the speaker Patel had no proper authority to declare Dabhi's decision ab nissi void. Dabhi is now the officiating speaker and will control the secretariat till a new speaker is elected. Meanwhile he has quashed the no confidence motion against himself on the ground that it was moved in the house before the notice period of 14 working days had expired.

The legal and the parliamentary aspects of the crisis have been temporarily frozen by the imposition of the President's Rule. A far more important and furious struggle is being unleashed outside the assembly. But it is going to take quite some time before it fully shapes itself. The volcanic eruption within a party proudly claiming to be a disciplined monolith has stunned its leaders and the panic-stricken high command is struggling at damage control measures by biaming it all on 'outsiders' like the governor, the union ministry and even the powerless Congress Party.

## **Washington Takes Aim at Immigrants**

Rajesh Gopalan

Recent legislative moves in the US indicate that immigrants are increasingly becoming the scapegoat of choice for politicians in Washington. Whereas the brunt of this offensive was previously directed at illegal immigrants, it is now beginning to impact legal immigrants with a vengeance.

WHEN Bill Clinton signed the recently passed welfare bill into law on August 22, it set the stage for some of the most sweeping cuts in a system of social security upon which millions of poor and elderly people across the US depend upon for survival. But what has received less prominence is a key feature of the bill that would deny legal immigrants who are not naturalised citizens any access to welfare benefits.

A new version of the 'Personal Responsibility Act', which was passed by the House of Representatives on July 18 makes all legal immigrants ineligible for most forms of weltare, including medicaid, food stamps, aid to families with dependent children (AFDC) and supplemental security income (SSI). The US senate also overwhelmingly passed a bill on July 23 with similar provisions.

Its sponsors claim the bill will save the US government around 60 billion dollars over seven years, around half of which would come from denying benefits to immigrants. According to its provisions, all immigrants will be denied medicaid, which provides

medical insurance to those who qualify under a stringent means test. In addition, it will also deny any cash assistance, such as SSI, which provides support to the elderly, blind and disabled.

As a result, virtually all of the 1.5 million poor and elderly immigrants in the US who currently receive some form of welfare will quite literally, be left to fend for themselves. With no means of support and no medical coverage it appears likely that many will be forced into destitution.

Reflecting the sentiment behind the new provisions, senator Phill Gramm of Texas provocatively declared that immigrants are expected to come to the US "with their sleeves rolled up, ready to go to work, and not with their hands out, ready to go on welfare". Gramm did not elaborate on what is to be done with the elderly and infirm, or indeed, with the children who constitute the majority of welfare recipients.

Both parties are anxious to get the pending business of 'welfare reform' over with before the November election. The bill is now almost guaranteed to be passed into law since Bil Clinton, who vetoed the last two welfar bills, has declared his support for this one praising the 'new spirit of co-operation' tha has been achieved between the Republican and Democrats. It should not come as surprise that the US political establishmen has suddenly found grounds for co-operation for the present bill conveniently intersect a number of their most important pre occupations.

Welfare and immigration are favourit issues for US politicians, particularly during election season, when invective agains 'welfare-mothers' and 'illegal immigrants commonly substitutes for discussion on the problems of the economy and polity. Racism also plays no small part in this: welfare crime and immigration have also long sincentered the political lexicon as 'code words' that carry a less-than-subtle undertone o race-baiting.

Many cite the US media as a prime culpri in the demonisation of welfare recipient and immigrants. In a bizarre and vivid exam ple of this, ABC's prime time live feature a group of young mothers receiving APDC on one of its nightly shows last year. Seate on stage, the young women were harangue and humiliated by the host Diane Sawye who declared that "to many people, these girls are public enemy No 1". Sawyer, who reputedly earns more than seven millior dollars a year, lectured the women tha "taxpayers" were "mad as hell", and deman ded of them to "answer their question: whe should they pay for your mistake?"

Whereas previous attempts, such a Proposition 187 in California specificall targeted 'illegal immigrants' for discrimi natory measures, it now appears that th distinction between legal and illegal is no longer a singificant one for the legislators Legal immigrants in the US are learning to their horror that Washington has made then the target of a wave of punitive and demonstratively hostile legislation.

For example, the new Anti-Terrorism an Effective Death Penalty Act, signed by Bil Clinton on the first anniversary of last April' Oklahoma City bombing, has effectivel mandated the immediate detention an deportation without appeal of any immigrar convicted of a crime, no matter how long ag or even how minor the crime. While the lit covers anyone convicted of most felonic and certain misdemeanours, this also includes, for example, someone found guilty c defacing a passport or even turnstile-jumpin (travelling on the subway without a fare

In the past three months since the bill was signed, hundreds of perplexed immigrant have been arbitrarily detained, often whe trying to re-enter the country after visit abroad, or at federal offices when renewin their green cards. Those apprehended hav

the law has no provision for appeal or for release on bond. Many of those being detained have lived in the US for years with their entire families, and now face the certain prospect of living away from them permanently.

Equally of concern has been pending legislation to make English the official language of the US. On August 2, the House of Representatives passed the English Language Empowerment Act, a bill requiring that all official government business of the US be conducted in English. But even those who support this bill agree that it is a largely meaningless measure. English is spoken by some 97 per cent of the population and virtually all government business is transacted in English anyway.

The bill does, however, convey the feeling that the English language is under some threat in the US, and that it needs to be legally safeguarded from encroachments by other languages – specifically from Spanish and other languages spoken by recent immigrants.

Historically, the attempt to impose an official language has been of significance in that it created an orphan class of distinctly un-official languages whose fate weighed between outright suppression and lengthy neglect. In Tsarist Russia, for example, the imposition of the Russian language throughout the empire under the policy of 'Russification' sought specifically to eliminate the national languages and cultures of the Polish,

subjects by assimilating them. Within the British Isles, the concept of an 'official language' was used as part of official policy to assimilate the Irish, Scots and Welsh into the English fold and into accepting the political and economic domination of England.

Predictably, the Congressional sponsors of this bill have not strayed far from these ideals. In its preamble, the bill warns that the existence of non-English speakers in the polity can lead to "divisions along linguistic lines" and that the solution to this lies in making English an official language to enable immigrants to "better assimilate".

House Speaker Newt Gingrich defended the bill by launching a blistering attack on the teaching of foreign languages in public schools, particularly those attended by non-English speaking, immigrant children. "This isn't bilingualism", he said. "This is a level of confusion which, if it was allowed to develop for another 20 or 30 years would literally lead, I think, to the decay of the core parts of our civilisation".

"Look at the strife in Canada because they do not have a common bond", said Congressman Brian Bilbray of California in an apparent reference to Quebec. But if anything recent history shows that such 'strife' results not by mere virtue of the existence of different languages, but from the attempt to deny them, and subordinate them to an 'official' language.

little too far at this time, and will likely be of immediate benefit only to Bill Clinton and the Democrats in Congress. By opposing the bill and expressing their moral indignation at its 'mean-spiritedness', the Democrats are successfully painting their Republican opponents as extremists, and stand to reap electoral rewards on this basis in November. Meanwhile, the only substantive argument that the Democrats themselves have countered with is that the bill will not be successful in its stated purpose of assimilation — as it does not provide any funding for English language classes.

But while this particular bill may ultimately never pass into law, it has hinted at definite trends underway. Two years ago. Proposition 187 in California enshrined the notion that 'illegal' immigrants were "fair game" for legal discrimination. At that time, by stressing that it only targeted 'illegals', it was clearly intended to reassure legal immigrants and to lull them into a false sense of security that their privileged status granted them an immunity from such targeting. But recent legislative manoeuvres indicate if anything that Proposition 187 was merely the first step.

What many fear now, is that after testing the waters with the anti-terrorism and the welfare bills, what Washington has established with the 'English Language Empowerment Act' is that all immigrants are now to be considered 'fair game'.

**APPOINTMENTS** 

# THE EFI SOCIAL AND LABOUR RESEARCH FOUNDATION -SOLAR FOUNDATIONARMY & NAVY BUILDING, 148, MAHATMA GANDHI ROAD, BOMBAY - 400 023.

Applications are invited for 2 posts of RESEARCH ASSISTANTS for research projects on various Social and Labour subjects. The candidates are required to have Masters Degree in Economics/Commerce. They should be prepared to undertake field jobs as a part of the project work.

Upper Age limit for the post is 50 years.

Candidates will be offered a consolidated salary ranging between Rs.3000/- & Rs.3500/- per month depending upon previous experience.

Applications should reach the Secretary-General at the above address within 15 days from the date of the advertisement.

## **Greater Israel and Ethnic Cleansing**

Frederic F Clairmont

The Zionist state of Israel has become one of our century's most arrogant violators of human rights. Combined with US-sponsored state terrorist practices, it is among the world's most adept practitioners of ethnic cleansing

ISRAEL's right to exist as an independent, sovereign political entity is a historical and moral imperative stemming from centuries of oppression, blatant discrimination of its people, not least the unforgivable crimes of Hitler's Final Solution

What were the foundations of the state that emerged 50 years ago of which ethnic cleansing was but one component? Where is the social justice and equity that its founders proclaimed? Does the US caste oligarchy, Israel and the Zionist diaspora that blueprinted these stratagems of terror, expulsion and abusive exploitation of the Palestinian peoples believe that the pursuit of such outrages given their sheer magnitude, are conducive to the survival of the Jewish state?

Tragically, however, the master race ('uber mensch') ideology of Zionism is rooted in racialism, cultural apartheid and liquidation of the most rudimentary attributes of human rights including property rights of others. The tragic corollary of this is the savage and unremitting mass expropriation of Arab lands by every conceivable stratagem of violence, threats and intimidation yoked to the expulsion of its peoples. All this, and much more Israel has executed with sanctimonious impunity.

Such were and are the foundations of Israel that drapes itself in the constitutional toga of democracy United Nations resolutions demanding its unconditional withdrawal from occupied lands are flouted brazenly with the benediction of the US government Successive US presidents, republican or democrat, tweedledum and tweedledee are the unbending advocates of Zionist expansionism

For decades these crimes without punishment were executed with the complicity of the terror state apparatus of the US its money-changer, its strategic handler, and ideological fellow traveller. What this means is that Israel has been reduced to the level of a major West Asian political tout in the service of maintaining the rule of capital and the socio-political status quo

In sum, the aims of the Zionist superstate with a population of 57 m (growing at 25 percent yearly) would have been unattainable without the massive and sustained power of the US corporate media, the military and multi billion dollar money muscle of the US An appalling price, however, is exacted for this Israel, the economic and military powerhouse, has become the geo-political spearhead of US imperialism whose rapacious quest is its unquestioned geo-political hegemony of West Asia and control of its energy sources. Is it surprising that one third of US foreign aid' is shovelled into Israel and Mubarak's banana republic, albeit in highly unequal proportions?

Where does Mossad end and the CIA begin, and vice versa, is not a facetious question, as Moshe Dayan quipped. As with the US, the foulest of deeds continue to be galvanised in the name of 'treedom' and democracy' That international law has been trampled on is of singular irrelevance.

Likud's Shamir encapsulated pithily the oppressor state's unmitigated racialism and contempt of international law. We are going to talk and talk with the terrorists [i.e., the Palestinians resisting the horrors of their oppression] about negotiation but while we re talking we are going to send in the scrapers and the buildozers on the lands we ve liberated (sic). What's more is that Palestinian labour will build those roads and settlements. He should have added at quasi slave labour wages.

It is one of the biggest hoaxes of the 20th century to have billed the apartheid state a democracy Such are the perversions of the corporate media, not least *The New York Times* and *The Washington Post* Apart from the peoples of the occupied lands, the 85,000 Arabs within Israel proper (18 per cent of the total population) is an oppressed national minority The call by certain Israel democrats for the oppressor state to become "a state for all its citizens" shows no glimmer of realisation

Indeed that formula is anathema to the theory and practice of Zionism whose ideological kinship with Nazidom is all too

evident Aiso, within the Jewish population itself the victous class polarisation is daily becoming more glaring

South Africa's apartheid system has been formally dismantled thanks to the armed liberation struggle, but that of Israel in its most obnoxious forms persists. Never mind No sanctions will be adopted against it in the US dominated UN-general assembly, not to speak of the US Congress whose pro-Israel propensities and the all-encompassing power of the Zionist lobby require no publicity

The common denominators of Israeli annexationism have been mass expulsions, beatings, disappearances, demolition of homes, imprisonments, systematic torture not to speak of aerial and artillery bombardments against defenceless Arab villages, the wanton killing of old men, women and children

In so doing the Zionist state has become one of our century's most arrogant violators of human rights. That is not all. Combined with US sponsored state terrorist practices it is indeed one of the world's most adept practitioners of ethnic cleansing.

#### THE OSLO DEAL

For the criticsof Yasser Arafat the Oslo Agreement represented a crooked deal between Arab collaborators and the I abour government. In this perspective the handshakes of Arafat with Shimon Peics and Netanyahu are fig leaves. The deal was flawed from the start. What triggered the desire of both Rabin and Peres and the Israeli ruling class for an agreement was the emergence of one of the most noble battles against the occupation the Intifada. What has happened since 1993? Nothing fundamental since the occupation has not ended.

What Oslo signified was a continuation of the occupation under another name. What the Israelis did not want, as the victory of Netanyahu demonstrated, was a genuine partnership with Palestinians but rather the creation of an Israeli client state. Give Arafat the title of 'president' they are saying but it would not change Gaza and the West Bank from being Bantustans. The analogy with South Africa is appropriate. They are similar to the Homelands in South Africa. The test case was Netanyahu's outright rejection of the formula, land for peace.

The Oslo deal sanctified the occupation and made the creation of a viable Palestinian state unworkable. The Palestinian autonomous government would thus become an instrument of the occupant and a permanent

bostage of US/israeli state terrorism. Arafat's presidency is one without power What the PLO precariously have are a number of highly fragmented cities and villages surrounded by the military and the settlers. They are not viable entities

Netanyahu won a marginalised electoral victory based on his repudiation of any kind of compromise with the PLO and on the slogan of Greater Israel. The one single issue on which the eight different factions in Netanyahu s shaky ultra right wing and fundamentalist coalition were able to agree was the expropriation of Arab lands.

Netanyahu's claim that he is doing no more than following in the footsteps of his Labour predecessors is true According to the settler publication Nekuda the so-called freeze' of the previous Labour government saw 50 per cent expansion in the number of settlers in the West Bank and Gaza from 1 05 950 to 1 51 324 in about four years After all noted Netanyahu in his speech to the US Congress which was received with thunderous ovation he could not be expected to do les What modesty and restraint The tact is at such tempestuous rates of annexationism and within a very short time span there won t be any Arab land left to expropriate

Likud's and Labout's US paymasters have whined from time to time at the scale of appropriations but they have condoned the settlements. Ariel Sharon master terrorist and rapist of South Lebanon has obtained the coveted pitze of infrastructure minister. The green light has now been given to further expansion. After his tour of West Bank settlements, interior minister. Ely Suissa granted millions of shekels for establishing new settlements with the apologetic utterance that while. I don't think this is sufficient, but it's a good start.

#### JERUSALEM THE TEST CASH

The question of self determination was never raised at Oslo What the recent Arab summit in Cairo stressed was that the pre requisite of peace not only in the occupied lands, was the setting up of a Palestinian state in the. West Bank and Gaza with Jerusalem as its capital Shortly after Israel annexed east Jerusalem, David Ben Gurion declared that the walls of the Old City should be demolished to expunge the Islamic heritage

Successive governments of the oppressor state, as one *Financial Times* analyst noted on July 15, 1996 (and 21so see Walio

Khalidi, Isiam, the West and Jerusalem, Hood Books, London, 1996) did something less striking but far more effective that included the building of massive settlements in the surrounding hills underpinned by military force as well as discriminatory housing policy. There was never any ambiguity in the mind of Ariel Sharon as to what that policy should be to transform a very small Jewish minority into "a Jewish majority for ever

This policy once again involved the mass expropriation of Arab lands, the ringing of Jerusalem with four big clusters of Jewish settlements on the surrounding hills. This would create a Greater Jerusalem, as a component of Greater Israel, that would be peopled, again Sharon, 'by at least one million Jews' "In Jerusalem', he thundered 'we built and created historical facts that can no longer be changed. We did it openly

This sounds just grand but Sharon and his gang of big time state terrorists must realiste that the scale of such rape is not immutable even if backed by billions of US greenbacks. Deployment of such unrestrained power ignores the lessons of the past notably the force of Arab nationalism and what has been called not inaccuritely the power of the

Arab street' of which the Intifada is a conspicuous illustration

The fires of Arab nationalism are burning strongly in such US client states as Saudi Arabia, Jordan Not least within the occupied territories. The US undeclared war against Iran Libya, Syria and Iraq have tanned these flames. It is well for Sharon and his religious fundamentalists to listen to the words of one of the leaders of Hamas.

Our strategy must be used at strangling the settlements wherever they are We can take to the streets to confront the Israeli bulldozers and do this daily In this way we can turn the life of the settlers into a hell (quoted in *The International Herald Iribune* September 13 1996)

It would be foolish to pretend that these are idle words. This time however Intifada as one of the greatest of resistance movements, will not be fought with the neolithic weapons of stone and sticks. Its fires will inevitably spread beyond the contines of Gaza and the West Bank it recalcitrance and aggression do not give way to compromise and common sense. I wonder if Netanyahu and his US Congressional predators are listening or have they lost the cipacity of so doing?

## **Neo-Liberalism and Daily Life**

James Petras Steve Vieux

Data on the effects of unemployment, underemployment and low-paid employment in the US reveal a strong tendency for the downwardly mobile to direct their anger inward, to become depressed, hostile towards their family and to withdraw from neighbours, friends and former colleagues. This behaviour is aided by the major political parties, the mass media and academic publicists who point to the inevitability of 'globalisation', the virtues of 'market competitiveness' and 'need' for labour flexibility – which presents the problem of the individual victim as the product of impersonal forces beyond her/his control.

ONE of the most puzzling aspects of contemporary life is the gap between growing socio-economic deprivation of a wide swath of wage and salaried workers and the virtual absence of political radicalism. At best there is general malaise, increasing voter alienation, voting against incumbents, public opinion polls showing a majority in favour of a third party, disgust with 'politics', politicians, Washington, etc. But these are views and opinions that don't materialise in any new parties, leaders or programmes to challenge the major economic and political institutions that are the source of downward mobility, employment insecurity and declining public services, social benefits and wages. In fact some of the very conservative politicians who propose to deepen the social cuts and further downward mobility are able to manipulate this diffuse voter malaise to gain public office in order to further punish their electorate and direct their anger at least temporarily at groups below or outside or at their neighbours, families and themselves.

What happens to people who lose their jobs or are confined to low paying part-time or full-time work? Rather than simply attribute the lack of revolt to general or abstract processes ('globalisation') or structural conditions ('the fragmentation and dispersing of work-sites'), or to ideological affinities ('gut conservatives', 'machismo', racism) or to historical identities (part of the 'deep South'), all of which may play a role, it is important to examine the sociopsychological effects of these negative changes induced by business on workers.

'Globalisation' has been around for several centuries and is as much an effect as a cause: it is pretty much known that state policy has played a major role in determining whether capital invests 'at home' or 'abroad'. And state policy is a function of the correlation of social forces – the capacity of different

classes to mobilise resources to influence state economic policy.

It is not impersonal global economic forces that are at work here but an economic strategy rooted in the interests of the upper class and the corporations. This strategy, which we refer to as neo-liberalism, aims to shift wealth upward by stripping away or weakening the benefits, protections, norms of pay and employment and working class organisations characteristic of the post-war period.

In the labour market this means that employees are facing an intensification of the insecurity that is typical of the working class condition under capitalism. Forty years of 44 hours per week employment at decent pay with benefits and a secure pension was for many a reality and many more a dream which stabilised and oriented working class life in the first 30 years of the post-war period. Over the past 20 years in the US a concerted effort has been made - in the Congress, the regulatory agencies, in the boardrooms, in international trade agreements - to uproot the certainties and securities of the earlier period. In this paper we explore the socialpsychological results of three trends in the labour market characteristic of the neo-liberal period: worker displacement, contingent work and the spread of low-wage labour. Our key question is why does the corporate globalisation strategy not provoke any countervailing response?

Clearly the bureaucratisation of trade unions, their decline to almost insignificance is one factor, as is their subordination to the 'globally ovented' Democratic Party. But what about the workers themselves? Before one jumps to discussing 'national' and 'political' responses, it is important to examine the 'pre-political', individual, primary and secondary group relations that result from corporate restructuring. It is our hypothesis that the socio-psychological (subjective) effects at the micro level affect

the capacity of classes – in this case wage and salaried groups – to respond with political efficacy to class adversaries.

Hence our assumption is that a precondition for political action is mentally healthy individuals who turn against employer abuse and identify it as such, rather than inward into chronic conditions of depression or other mental disorders. Secondly, we will argue that individuals who direct their anger toward abusing those they live with are less likely to engage in radical political action. Conversely, strong families, solidarity and loyalty between spouses and within couples is a precondition for directing anger upward and outward to the sources of deprivation and downward mobility. We do not argue that strong domestic ties necessarily lead to radical political action; what we are saying is that domestic violence and child abuse is the result of transmitting corporate violence from the victim to their next of kin or those they live with. The victim becomes the victimiser, which precludes political opposition and creates a bond between the employer as victimiser and the displaced worker as victim/victimiser. For example, while conservatives proclaim the importance of supporting 'family values' their social policies put great stress on the family. The employee that absorbs the 'family values' rhetoric without the means to sustain his family may then try to force the spouse to conform to the conservative ideology (family duties, exclusive child rearing by the family, etc) even as, for example, women are obligated to engage in full-time employment outside the home. Finally, downwardly mobile individuals who withdraw from friends, former work-mates and from community involvement are less likely to 'socialise' their individual predicament, create elemental bonds which are the preconditions for political action. Conversely, individuals who group together with other displaced and/or low paid workers, or who retain ties to unions and begin to discuss their conditions are more likely to search for broader social solutions rather than blame themselves, seek multiple employment, etc.

This essay explores precisely the socialpsychological consequences of restructuring in order to understand why downward mobility is not associated with political revolt. This study is 'diagnostic' rather than 'prescriptive'; it looks at the first link in the chain of causes and effects that connects what C Wright Mills described as the 'private discontents' that lead to public action.

#### CAPITAL MOBILITY

A key element in 'neo-liberal restructuring' is capital mobility: from one geographic region to another, from one sector of the

economy to another, from labour intensive to capital intensive. The result is a growing 'transitory relation' between employers and employees. The workers' experience on the job is constantly in flux. There are only temporary connections and links with fellow workers, with employers, with the surrounding work and living environment. Hence there are many relations but they are surface or superficial. Transitoriness becomes a way of life where there are no deep commitments and little basis for social solidarity. The result is the decline of social support systems, atomisation and an increasing sense of individual vulnerability. When disaster hits the impact is crushing.

During the 1980s, 20 mn workers were displaced, fired without possibility of recall. Over the decade the percentage of blue collar workers among the displaced fell from 65 per cent to 55 per cent [US Congressional Budget Office:9]. Hurt worst were many of the older, less educated workers with long tenure on their previous jobs. They took longer to find new jobs, suffered greater than average wave reductions when they did find a 10b or were displaced from the labour market entirely. Displaced workers tended to spend just under 20 weeks unemployed, with older workers, women and non-white workers taking longer [US Congressional Budget Office: 19, 211. Surveyed one to three years after losing their jobs, half of the displaced were either still not working or were earning less than 80 per cent of their old salaries, some of them substantially less [US Congressional Budget Office:xii]. Of the displaced white collar workers, twothirds of administrative support workers such as secretaries were re-employed in similar jobs but fewer than one-half of managers and executives were able to find jobs similar to their old ones [Caves and Kreps 1993].

The displacements have continued in the early 1990s at a brisk pace. Between the start of the recovery in the spring of 1991 and the spring of 1994 the largest corporations in the US had announced plans to cut more than 1.8 mn jobs [Forbes, April 25, 1994: 242-43]. Of firms reporting cuts to the American Management Association the percentage of manufacturing firms which downsized fell as the decade progressed while the percentage of service firms (financial, business and professional, etc) grew sharply [AMA 1994:1]. Permanent displacements gradually came to be regarded not as a singular, conjunctural development but as the reflection of a 'deep structural change' in a 'prolonged era of job loss' [Fortune, September 20, 1993: 54-56; Wall Street Journal, March 16, 1993].

Unemployment is a source of psychological stress which has consequences for the mental well-being of the unemployed person. The meaning and experience of unemployment noted by researchers —

financial pressure, the destabilisation of daily routines, activities and identities and the disruption of plans and hopes - all contribute to chronic stress. Unemployed workers have been shown to suffer higher levels of psychological symptoms compared to employed workers As one scholar put it "...unemployed individuals fare more poorly than employed individuals on virtually all aspects of psychological functioning" [Barling 1990, 1992]. Symptoms range from increased negative mood to increases in anxiety and depression following the layoff as well as greater number of psychosomatic complaints and greater levels of parapola and hostility [Liem and Liem 1990:184-85]. A majority of 20 or more time series studies on suicide found that unemployment had negative consequences [Dooley and Catalano 1988:5]. Mortality rates were generally higher for the unemployed. A study done in England and Wales, for example, found that "unemployment increased the risk of mortality by 20-23 percent" [Barling 1992: 192].

Given the large number of executive and management employees who were forced out of management and into such areas as administrative support or sales, the psychological consequences of underemployment – working below one's credentials – should be noted. Underemployment has adverse psychological effects. A study of the underemployed found that one-fifth of those surveyed considered their lives to have taken a serious turn for the worse as a result of their condition [Barling 1992:221].

In many ways small and large, the stress of unemployment has adverse consequences for family life. Ross and Sawhill's longitudinal study of 5.000 families found a positive relationship between unemployment and marital instability [Ross and Sawhill 1975]. Economic stress may also increase, short of separation or divorce, levels of marital conflict [Moen, Kain, et al 1983]. Increases in the unemployment rate are associated with increases in the divorce rate [Barling 1990:204].

There is strong evidence of a link between child abuse and unemployment. For example, one study examined all child abuse cases reported to the authorities in the US during 1967 and 1968. 13,000 cases. This data were supplemented by a sample of incidents from 39 cities and countries. The numbers of fathers unemployed at the time of the abuse was higher than in the population at large and nearly half of the fathers had been unemployed in the year before the incident [Gill 1971, discussed in Barling 1990:206; Jones 1990]. A variety of studies using different methods indicate a connection between spouse abuse and unemployment. Both studies of women in battered women's shelters and emergencies rooms and large surveys based on random samples indicate higher than average levels of spouse abuse in families where the father is unemployed [Barling 1990:200].

#### PART-TIME WORK

The contingent workforce in the US is composed of part-time, temporary and subcontracted workers. The total contingent workforce is estimated to make up over 25 per cent of the workforce. Part-timers those working under 35 hours per week are the largest part of contingent workers [Belous 1989:20]. Most of the growth of part-time unemployment since 1979 has come from the growth in involuntary parttime workers - workers who would prefer full-time work [Tilly 1991:10]. The percentage of part-timers in the workforce has grown from 2.1 per cent in 1957 to 18 per cent in 1991. Two-thirds of part-time workers were in clerical, sales and service occupations. Part-time work grew at an enormous pace in the 1980s: "Between 1979 and 1987, it increased about four times as fast as full-time or voluntary part-time employment" [Levitan and Conway 1992:48]. Some 17 per cent were in managerial, profession and technical positions [Levitan and Conway 1992:45]. The desire of employers to cut labour costs has been the driving force behind the growth of parttime labour not the work preferences of employees [Tilly 1991:10].

Women make up two-thirds of part-time workers. The men are largely retirees or teenagers. The part-time workers typically receive lower wages than full-time employees. In 1992 part-time hourly employees earned 62.3 per cent of the wages of full-time workers [US Senate Hearing 1993:26]. One quarter of part-time workers earn the minimum wage compared to one in 20 full-time workers [Tilly 1991]. In 1985 about one-half of full-time, full-year workers had pension plans while fewer than 20 per cent of part-time workers were covered [Levitan and Conway 1992:53]. Part-time workers are far less likely to receive paid vacations, holidays, personal or funeral leave in large and medium-size US workplaces. In smaller companies, where huge numbers of jobs have been created in recent years, the situation is much worse in these areas. as it is for health insurance coverage and pension plans [US Senate 1993:26-27].

Despite the rapid growth of part-time work, study of its social-psychological consequences for the individual and family life is still not very far advanced [Rotchford and Roberts 1982; Barling 1990:239]. In the US the rate of growth of participation in part-time work by males was higher than for women, though female participation in absolute terms far exceeded that of males. Internationally, there is evidence of the start of a decline in womens' participation in part-time work [ILO 1993:20]. A large government sponsored survey of self-selected

respondents in Canada turned up much worker dissatisfaction with pension and other benefits and a strong sentiment that part timers were more badly treated than full timers and exploited by employers in order to save benefit and other costs [Canada Commission of Inquiry 1983 85] A very extensive survey of European employers and union representatives covering large businesses in eight countries found that the employee representatives most often criticised the lack of career opportunities lack of job security and lack of fringe benefits when asked to describe the disadvantages of part time work for the employees [European Foundation 1993 122 23]

US researchers have found part time workers to be especially dissatisfied with job security, impersonal treatment by employers and underuse of their skills and abilities [Feldman and Doeipinghaus 1994]

The bulk of part-time workers now are women and such work poses errous problems for them and for family life. Part time workers reported that they felt excluded on the job from access to organisational interpersonal and skill development areas Currously, given what is known about the pay and benefits of part time work there is mixed evidence about the job satisfaction of part time workers. Some studies have found that women experienced more satisfaction and happiness at work than full timers while other inquiries have found significantly less satisfaction among part timers [cf Barker 1993 52 and McGinnis and Morrow 1990] As we shall see women part timers have significant areas of conflict between their family and work roles (role conflict) as well as role overload. One may speculate that the high levels of job satisfaction may reflect satisfaction with a carefully crafted delicately balanced schedule of work and home responsibility - and a reluct incc to alter the current schedule more than satisfaction with the conditions ip by and benefits of the job per se (For a similar argument used in a different context see McRae (1989))

There is good reason to think that women suffer more stress than men because of the conflicts between their roles at work and in the home (role conflict) as well as the sheer magnitude of the tasks they are forced to try to accomplish (rol- overload) [Emmons et al 1990 86 Piotrkowski Rapoport and Rapoport 1987 256] While there is some increase in husband's participation in work around the home wives still perform a disproportionate share of this work [Fmmons et al 1990 86] Women therefore experience more conflict between their roles married employed women experienced more role conflict than did women who were housewives [Emmons et al 1990 86] Poorer families and particularly the women in these families which lacked the resources to manage the conflicts between home and

work, by employing domestic help for " example, were likely to experience stress as tensions stemming from work spilled over into the family and vice versa [McRae 1989 42] Occupational stress has been associated among male blue-collar workers. with a variety of psychological symptoms and disorders, including alcohol-related problems. Though there are fewer studies of female blue collar workers there is evidence to suggest that this association holds for them as well [Bromet et al 1990 135] Studies of temale blue-collar workers have found a strong relationship between stress in the family and marital conflict on the one hand and depression and depressive symptoms on the other [Bromet et al 1990 136] According to a recent study of women and part-time work women workers did not report lower role conflict or role overload [Barker 1993] Why this should be so and its consequences for the lives of women and families are important areas of inquiry for future investigation given what is known about stress on the job and at home

Perhaps the most disturbing consequence of part time work is the high rate of spouse and child abuse in families where the husband is working part time. A national probability sample conducted in the US in the 1980s focused in part on employment status and domestic violence and found that physical child abuse occurred in 26 per cent of the homes in which the father was employed on a part time basis, the highest of all the rates reported. As for spouse abuse, spouse abuse, was highest when the husband was employed on a part time basis." [Barling 1990 206]

An important feature of part time work in the US is the heavy participation of teenagers in this work. In recent years between one half and two thirds of all high school juniors have held part time jobs at some time during the year. Very often, they work heavy schedules over one half of all employed high school seniors and almost one quarter of all employed sophomores worked more than 20 hours per week.

Psychologists who have studied this phenomenon have tound adverse consequences for these teenagers in the areas of school performance and involvement, deviance and participation in family life when the teenagers worked more than 20 hours per week. The students tended to do less homework to take part less often in school activities to drink and take drugs more frequently and to assume a greater degree of independence and autonomy from their parents and engage in delinquent acts Later studies replicated the earlier results In addition longitudinal studies showed that teenagers who later went on to work 20 hours per week or more were already significantly withdrawn from school and independent from their parents but that part-time work furthered these attributes along with delinquency and drug use [Steinberg, Pegley and Dornbusch 1993, Steinberg and Dornbusch 1991].

#### LOW WAGE WORK

One of the most disturbing features of the neo-liberal economy is the expansion of low wage work The percentage of the workforce in low wage work for year round, full-time workers fell from 24 1 per cent in 1964 to 12 per cent in 1974 The proportion of workers in low wage work remained stable between 1974 and 1979 By 1990 the percentage was back up to 18 In absolute numbers 7 8 mn were low wage workers in 1979 compared to 14 4 mn in 1990 [Mishel and Bernstein 1994 127] The overall direction of these trends held true for all races but with larger expansions of lowwage work for blacks and Hispanics [Mishel and Bernstein 1994 1281

While the rate of those receiving low earnings has increased for all age groups since 1979 young workers are more likely to receive low wages. The percentage of tull time year round workers in the 18 to 24-year old category who received low wages rose from 22.3 per cent in 1974 to 39.2 per cent in 1989. Expansion of low wage employment has contributed to what has been described as one of the most significant income developments over the past two decade, the drop in family income of the youngest families trying to raise children.

Households headed by persons under age 25 experienced a drop in family income of 26 3 per cent between 1973 and 1986 As one labour economist put it, 'the relative income position of the nation's youngest families has deteriorated fairly sharply and continuously over the past two decades (1967 86)" [Grant Foundation 1988 16, 18] Married couples lost 11 per cent of their incomes in the 1973-86 period while female headed familes with no spouse present lost 32 4 per cent of their income White families lost 194 per cent of their real income in the period compared to a 467 per cent loss among black families headed by a person in this age group

Given these trends it is not surprising that poverty has increased over time among this age group and that young families have higher poverty rates than do families generally. The percentage of families in poverty headed by a person under 25 increased from 15.3 per cent to 32.6 per cent in 1989. In 1989 the percentage of all families with incomes below the poverty line was 10.9 per cent, the percentage for young families was 32.6 per cent.

The spread of low-wage work does not automatically mean an increase in the number of families below the poverty line. The family income of a family with two low wage workers may suffice to lift the family above the poverty line. What it does mean is the spread of economic hardship and insecurity.

An illness - for many of these workers are uninsured - a lost job or an employer cutback of hours may easily plunge the family

Economic hardship has been linked to increase marital tension and, eventually, higher levels of marital instability (separation and divorce) [Liker and Elder 1983] Divorce is more likely among low income people, a finding which has held good over decades of research Unskilled work has also been associated with greater marital instability [Raschke 1987 603] It may be that stressful and unsatisfying work experience are displaced into the home where they lead to conflict [Piotrowski Rapoport and Rapoport 1987 2661

There is considerable evidence that stress ful living conditions - including unemploy ment low income and/or discrimination are associated with child abuse and neglect [Kadushin and Martin 1981 16 19] The widespread notion that child abuse and neglect occur to the same extent at all levels of the class structure is false. As one researcher comments Every national survey of officially reported incidents of child neglect and abuse has indicated that the preponderance of the reports involves families from the lowest socio-economic levels' [Pelton 1981 24, Starr 1988 132 Kadushin and Martin 1981 161

This is not simply a result of the greater vulnerability of the poor to exposure and reporting Particularly telling is the fact that the majority of fatal victims of child abuse and neglect are from poor families [Pelton 1981 29] Because of the greater visibility and the greater exposure, abuse fatalities are proof against the reporting biases which, it has been argued, plague child abuse statistics The fact that the incidence is so much higher among the poor is therefore of broad significance for understanding the social incidence of abuse

#### CONCLUSION

Our brief survey of the available data on the effects of unemployment, under employment and low plud employment reveals that there is a strong tendency for the downwardly mobile to direct their anger inward to become depressed, hostile towards their family and to withdraw from neighbours friends, former workers This behaviour is aided and abetted by the major political parties the mass media and academic publicists who point to the inevitability of 'globalisation, the virtues of 'market competitiveness' and the 'need' for labour flexibility, which presents the problem of the individual victim as the product of impersonal forces beyond her/his control Insofar as there is an absence of an ideology (and institutions to transmit it) which identifies the negative outcomes as a product of corporate calculation based on class interests opposed to those of labour, the downwardly mobile workers have as their only 'reterence groups' their immediate circle - themselves, their families and their acquaintances Whatever aggressions and frustrations accumulate, they are deflected downward and inward rather than outward. as the wealth of data we have cited shows

The problem of advocates for the downwardly mobile workers then is how to accompany' the fall with channels of communications and ideology which creates new sites of activity outside of the home, provides activity in the extra timeframes for costructive action directed at the source That teaches family values of solidarity based on the common need to counter corporate abuse instead of domestic violence and child abuse

## **Interrogating Anthropology**

Mary E John

Fictions of Feminist Ethnography by Kamala Visweswaran, Oxford University Press, Delhi, 1996, pp xii + 205 Rs 345 First published in 1993 by the University of Minnesota Press, Minnesota

KAMALA VISWESWARAN's book stands out as one of the more innovative and courageous efforts to deconstruct, if not undermine the discipline of anthropology by an insider The book consists of nine discrete essays loosely interconnected by virtue of their production at the conjuncture of anthropology, post-structuralist theory and teminism in the US. In her introductory chapter Visweswaran acknowledges that her book is largely aimed at North American audiences, even though she also expects to beread in south Asia. The book is most obvious interest for an Indian reader (but by no meanits only one) lies in those essays which draw upon fieldwork experiences during her project on Tamil women's participation in Indian nationalism, a project that is not yet complete Taking my cue from Visweswaran's un certainties about shuttling between cultures and her belief that "different audiences might require different forms of writing and theorising' (p.11) this review exploies the significance of her book for an Indian audience

As an ethnography that is self-consciously experimental Fictions of Leminist Ethno graphy does considerably more than practice the by now quite well known and well worn) precepts of the experimental turn in the discipline, which questioned older assumpt ions of 'writing culture. First of all according to Visweswaran, the much proclaimed new ness of experimental anthropology during the 1980s was something of a misjudgment - a significant number of US women anthropologists have for instance, been working across genres, employing modes of fiction autobiography and so on, as far back as the earlier part of this century. Secondly, much of the trademark self-reflexivity of the newer approaches designed to interrogate the ethnographic authority underwriting the ability to represent other cultures for the west has too often served instead to reinforce this very authority. While the first two chapters of Visweswaran's book are engaged in retrieving marginalised anthropological voices (such as Franz Boas first generation of female students) for their relevant feminist critiques of mainstream positivistic assumptions, the remaining chapters are devoted to a demonstration of the kind of deconstructive method Visweswaran has come to inhabit

The titles of some of the chapters -'Betrayal An Analysis in Three Acts', 'Refusing the Subject', 'Feminist Fthnography as Failure' - provide some indication perhaps, of the author's special concern with the apparently less than successful aspects of the ethnographic enterrise Negative experiences in the field, that are usually only taken to be failures that must subsequently be overcome, serve here as a kind of touchstone, enabling the author to reflect on questions of form method, the status of fiction and the position of the anthropologist 'Deconstruction stands for the textual ability to undermine authority. by actively working with the problem of the effects of relations of power - whether between the investigator and the investigated, among her interviewees themselves, within the family or netween nationalist discourse and the women it came to interpellate

Within our Indian context the careers of ocial and cultural anthropology (whether housed in the discipline of sociology or not) have engendered nothing akin to the tlurry of questionings, simultaneously methodological and political of which Lictions of Feminist Ethnography is an exemplar Nor have feminist inroads into the discipline of anthropology here made any significant impact on its overall frames of reference or methods of inquity. This is not the place to try and fathom such divergent legacies, except to note in passing that a critique of the making of Indian anthropology and sociology is long overdue (My point is not to show up Indian anthropology for being behind the times, but simply to wonder at the considerable distance that continues to separate the discipline from contemporary experiences and issues)

Since the author does not directly address the specificity of the institutional field she is working within, we are left with the assumption that the overwhelming problem for the new ethnography has to do with representing cultural difference. For a feminist ethnographer this translates into the reality of the failure of sisterhood—the breakdown of 'fables of rapport' the silences, betrayals and refusals to speak. In one of her chapters, Visweswaran stages an account of an interview that failed, but the moral of this story is not that the anthropologist will try

and do better next time Instead, she draws suggestive contrasts and connections between 'fieldwork' and 'homework' Experiences of failure in fieldwork appear to have sensitised Visweswaran to her takenfor-granted 'home' in the US, which, like most ethnographers, she had left behind in order to enter the 'field' The US turns out to be a place neither she nor North American anthropology more generally have sufficiently reclaimed as a site for ethnographic investigation for 'homework As Visweswaran puts it, "home once interrogated is a place we have never before been" (p 113)

We thus get a remarkably imbricated account of the predicaments and complexities of contemporary US identity politics from the perspective of a second generation Indian-American of mixed parentage Much of its value lies in the way Visweswaran is able to contextualise and historicise the making of the Indian-American community within the deceptive multi-culturalism' of the US This includes NRI s indifference towards, if not erasure of, native American 'Indians', as well as the active promotion of conservative anti-alfirmative action lobbyists such as Dinesh D Souza Thus the feminist ethno grapher's purpose is hardly one of simply reclaiming an identity or a community

My second generation hyphenated identity is formed in the process of negotiating political atfinity and alliances of coming to terms with whom I owe allegiance, and where my accountabilities lie, activating at times membership in Asian American and south Asian coalitional identities, at other times identification as woman of colour or Third World woman' (p. 139)

Since Visweswaran's overall concerns have to do with the possibilities and limits of reconstituting the home' and the 'field' across cultures, how might one respond to her representational strategies regarding India, her teminist interventions within Tamil nationalism?

One of the most important tasks she performs is to confound the expectations of her western audiences, eager for native voices and stories from the field. Given the normative power of western feminism, now ready to receive 'Third World women' in all their fascinating difference, Visweswaran's multiple cautions are timely and necessary. As Visweswaran underscores, western ethnographers, including feminist ones, not only have to unlearn their assumptions about gender, but must confront informants' refusal to speak on cue into the tape recorder.

At the same time the strong emphasis on problems of failure in the field seems to place an overwhelming burden precisely on these experiences of failure, and on the particular women interviewed, such as

'Uma', 'Janaki', 'M'. While I, for one, am happy to see the category of experience rescued from its precipitate ejection by poststructuralist theory, its effective theorisation requires a more active engagement with the relevant historical context of contemporary India and Tamil Nadu. The notion of 'conjuncturalism' offered in the book as a way of dealing with interactive global cultural processes does not quite address the site of fieldwork/homework in India as a sociopolitical location constituted by intellectual and political engagements. There is something abstract about the brief discussion of nationalism, the family and marriage that is offered; moreover, the very plausibility and ordinariness of the problems Visweswaran encountered get crowded out in the process.

Thus, for instance, the fact that one of the women she interviewed, Uma, did not reveal to Visweswaran that she had been a child widow (which was betrayed to the author by Uma's friend and co-nationalist Janaki) seems quite understandable, considering the over-determined status of the 'widow' ever since social reform movements produced her as the emblematic figure most in need of redemption. I am therefore unclear what to make of Visweswaran's claim that the tamily does not change during nationalism (p 57). In different parts of India – south and north – the family changed intensely, if under complex patriarchal and colonial

conditions that precluded 'autonomous struggle' by women. (For instance, the breakup and transformation of the Namboodiri-Nair alliance in Kerala under the pressures, amongst other things, of the nationalist ideology of conjugality, may not even be the most dramatic historical example one could cite.) Given the crucial importance of regional, as well as caste/class/gender difference (which is another way of saying that the very shape caste, class and gender issues take are fundamentally affected by regional considerations), one must also pause before applying an essay such as Partha Chatterjee's 'Nationalist Resolution of the Women's Question' without any mediations: Can an analysis of 19th century Bengal speak directly to 20th century Tamil Nadu?

I have raised these doubts in order to point ahead to the fuller exploration of questions of the family, marriage, social reform and agency for women during Tamil nationalism that Visweswaran's present book leads us to expect. Having overturned the orthodox anthropological requirement of writing a monograph before venturing into the escay, there is no telling just what may lie in store, when so much of the western ethnographic structure has broken down. Given Visweswaran's accountability to multiple audiences, and her recognition that such an accountability may require different accounts, we are not likely to be disappointed.

typology is used to clarify regional political configurations. Raghavan shows that in the Narmada valley, commercialisation and redefined property rights generated three tendencies, dominance of the 'malguzars', though the instruments of control evolved; struggle over rents and rights of occupancy tenants; and vulnerability of peasants operating on insecure rights, poorer soil, and perpetual indebtedness. Bates studies one source of central Indian commercialisation, "the presence of backward reserves of cheap grain and labour" (p 367), mainly migrant labour from Chhattisgarh. They were 'overexploited' in the malguzar-dominated wheat area, and somewhat better-off in the cotton areas of Berar, but in either case, came from "a tribal form of economy which in itself acted as an obstacle to the penetration of capital" (p 348). Amin examines "dimensions of dependence" in eastern UP sugar milling in the 1930s - polarity of interests between cane-growers and mills, and maltreatment of the former by the latter. The unbalanced bargaining "stemmed from conditions specific to the region - a consequence of peasant dependence which had now acquired a new dimension through the growth of sugar mills" (p 256).

All the remaining essays of the volume can be discussed together, because they address, implicitly or explicitly, a single question of broad and inter-disciplinary interest. The question can be phrased as. When does commercialisation enable development? If 'development' is defined as sustained rise in productivity, it is identical, at least in the long run, with high or rising rates of investment in land Analytically, two types of explanations are possible for under investment in land: (1) dominance of non-profit incomes -- rent, tribute or interest over profits, a situation attributable directly. power-relations, but perhaps fundamentally, to sheer scarcity of land and capital relative to tillers; and (2) madequate state intervention in extending supply of scarce resources - formal credit, water which can augment land, knowledge and skills which equip and empower labour, etc.

Within this framework, several lines of reasoning can occur to explain why commerce did not necessarily generate development in colonial India. I shall deal with three of these, land-scarcity, credit-scarcity, and infrastructure-scarcity.

Eric Stokes' essay contrasts eastern and western UP primarily in terms of demographic situations which gave rise, in the poorer east, to early land-scarcity and stronger rentier relations. Curiously, the study no more than casually mentions the fact that western UP received much greater landaugmenting public investment. Kaiwar too stresses population density as a factor in western India's regression from prosperity

## A Random Selection in Agrarian History

### Tirthankar Roy

Agricultural Production and Indian History edited by David Ludden; Oxford University Press (Oxford in India Readings: Themes in Indian History), New Delhi. 1994; pp x + 382, Rs 395

THIS book contains a selection of essays on agrarian history of colonial India, presented with a well-written introduction on the evolution of the discipline, and with a useful and comprehensive annotated bibliography. The essays themselves are taken from works well known in the field, and are deservedly reprinted.

Beyond a shared concern in 'commercialisation' of agriculture in a loose sense, there is little in common among the essays, as one can guess from the book's generous all-inclusive title. Some, in fact, are more about regions than about agriculture. The detailed themes include: rise of commodity production (B B Chaudhuri on Bengal, A Satyanarayana on coastal Andhra), production and exchange relations (Sugata Bose on Bengal, T C A Raghavan on central India, Shahid Amin on eastern UP sugarcane), migrant labour (Crispin Bates on central India), and explanations of eco-nomic growth or stagnation (Eric Stokes on UP, Vasant

Kaiwar on Bombay Presidency, Ian Stone on UP, and partly Satyanarayana). Some of the articles, to be taken up next, can only be discussed individually.

Chaudhum's work on Bengal is too tamiliar to need any introduction. The article here describes the progress of commercialisation crop by crop, and shows how local factors interacted with the more rapidly changing macro-economic conditions aiding exports. Satyanarayana's research on coastat Andhra is similar in spirit, but covers a wider range of activities connected with agriculture. Bose and Raghavan deal with class structure. Disputing the celebrated 'jotedar thesis', proposed by Rajat and Ratna Ray, which generalised for colonial Bengal an organisation dominated by 'village-controlling rich farmers', Bose distinguishes three types of organisations: the jotedar-sharecropper complex of north Bengal, peasant smallholding of eastern Bengal, and small-holding with demesne labour in central Bengal. This to stagnation, but goes one step further, and attributes high-fertility demographic regime to social practices enabling easy access to subsistence Population recurs also in Bose's account of the eastern Bengal peasant, "weighed down by scarcity of land" (p 301).

Kaiwar argues that most other theories of under-investment that preceded him shortage of capital, or proximity to the technical frontier at given private resources - are wrong. He does not, in my view, succeed in this critique. Kaiwai's own data do not disprove that capital was scarce, but suggests that it was scarce only in regions where risks to lenders were great. In general, and as one would expect, credit-supply was positively correlated with prospects of return over risks across space and overtime. The point he misses is that high risk was endemic in Indian agriculture, and so too, therefore, was high cost and small quantity of credit supplied. On the technical barrier, Kaiwar points out that in theory it was possible to raise yield by changing practices. Maybe, but since it is not shown whether these changes were costneutral or not, one wonders whether capital wasn't the main reason why such changes did not happen widely. If anything, the belief that capital was scarce appears stronger after his critique, pending more careful analysis.

The few instances of actual development show how important infrastructure. especially cheap commonly-shared water. could be as a positive stimulus. On canal irrigation in northen India, E Whitcombe's sceptical assessment has been influential. While the scepticism may be well-founded. a possible implication of her study, that the canals were on the balance harmful to the cultivators, is so absurdly counter-intuitive. that the issue demanded further probing. Stone offers a more credible judgment. He argues that in the Upper Doab, canals did in fact have the expected positive effects: shift to higher-valued crops, increased area and yield, lowering of risks, higher labourdemand, and better food-security. Satyanarayana illustrates for coastal Andhra, not only the positive specialisation-effects of canals, but also the general stimulation to commerce and industry that followed in the wake of a broad-based infrastructural development of which canals were a part.

Let me state more generally the important conclusion common to these articles, implicit in each one of them, and ignored in the editorial introduction. It is, public investment inattered, above all. It is strange that, invariably, the essays go about the task of explaining the connection between commercialisation and underdevelopment by

means of essentially local variables, without pausing to ask how consequential was the colonial state us an investor in common assets, by the standards of British practices in other colonies, and of developing economies elsewhere? My impression, indirectly confirmed by the essays, is that the British Indian government created so little public goods and productive assets, and especially little in rural India, that it is unnecessary to look for any other cause of the region's poverty and underdevelopment by 1947. I may be wrong, but at any rate appropriate standards and informed positions on the role of the state are necessary before assessment of any local changes can be made.

The preceding criticism suggests what is not right with the volume. It does reflect scholarship, as it is meant to, but does it passively. The discipline is sufficiently evolved to have enabled a volume focused upon a set of narrowly defined questions. Instead, what we have is a rather arbitrary collection – the same title, introduction and bibliography could well have accommodated different combinations of authors and articles. Having said that, one must acknowledge that a group of individually important works reprinted together always represents a useful teaching-aid for the profession, and this volume is no exception

#### A Beacon Across Asia

Rs 360.00

A Biography of Subhus Chandra Bose

Dr A. Werth, S. A. Ayer, S. K. Bose (Eds.)

This English edition of a trilingual biography of Subhas Chandra Bose, which is also available in German and Japanese. places Bose in a correct historical perspective with regard to his much publicised revolutionary activities, and to provide an understanding of an extremely complex man.

## Sarojini Naidu

Rs 150.00

Her life, work and poetry

V. S. Naravane

In this biography of Sarojini Naidu, which is inextricably interwoven with the personalities and public events of her time, Dr Naravane offers us what is probably the most balanced, extensively researched and compact study of her life, work and poetry published thus far.

Orient Longman Limited, 3-6-272 Himayatnagar, Hyderabad 500 029

## **Budgetary Policy and Economic Growth**

#### Errol D'Souza

The share of capital expenditures in government expenditures has been slipping and the tax reforms have not yet improved the income elasticity of the tax system. In order to keep the economy on a high growth path direct measures to boost savings and public investment are required, both of which measures require a new thrust to economic policy management that is missing in the budget.

1

THE motto of the United Front government, according to the finance minister is growth with social justice. Moreover, growth is seen as a precondition for social justice because "unless the country's GDP grows at over 7 per cent per year in the next 10 years, we will not be able to abolish poverty and unemployment" (budget speech). The problem in keeping growth going is twofold. First, "we cannot sustain a 7 per cent growth unless we can revitalise infrastructure sectors" (budget speech). Second, "the biggest challenge that we face is the fiscal challenge" (budget speech). To tackle the fiscal challenge the strategy proposed has two planks - to raise more revenues together with establishing a credible public expenditure management policy. It is with this emphasis on growth that this article is concerned. Given the preoccupation with growth we ask how tax reforms - the only area of reforms that has been comprehensively implemented in successive budgets and which has generated a large consensus - given the current economic conjuncture can contribute to promoting this objective and what sort of supporting policy measures can be of help in this regard. We review the expenditure and revenue patterns during the reforms period and some of the specific budgetary proposals this year before analysing the impact of tax reforms on economic growth.

The scenario on the expenditure front has deteriorated over the years. The Tax Reforms Committee had stressed that control over the growth of public expenditure is a prerequisite for the success of tax reforms and there has been a marginal attempt to rein in the growth of expenditures. The trend growth rate of central government expenditure during 1985-86 to 1990-91 (the pre-reforms period) for instance was 13.66 per cent and from 1990-91 to 1995-96 (the reforms period) this has fallen to 11.45 per cent. However, it is the composition of these expenditures which is proving to be a constraint on the management of fiscal policy and the expenditure management and Reforms Commission proposed to be set up will have to deal with these harder issues in the interests

of the promotion of fiscal stability. Current transfer payments (interest, subsidies, etc) averaged 30.11 per cent of total central government expenditures in the pre-reform: period. In the reforms period this component of expenditures has mushroomed with the figures being 35.88 per cent in 1990-91 and 40.55 per cent budgeted for 1996-97 (Table 1). Similarly, consumption expenditures as a proportion of central government expenditures which had averaged 36.94 per cent in the pre-reforms period have increased from 33.94 per cent in 1990-91 to a budgeted 38.96 per cent in 1996-97. The increase in transfer payments and consumption expenditures has been at the cost of capital expenditures which is the growth promoting component of government expenditure.

Capital expenditures as a proportion of central government expenditures had averaged 32.62 per cent in the pre-reforms period and declined sharply from 30.18 per cent in 1990-91 to a budgeted 20 49 per cent in 1996-97. To get growth going, transfer payments and consumption expenditures will have to be reined in so as to make the funds available for capital expenditures. As interest payments are a major part of transfer payments - they amount to 72.28 per cent of transfer payments in 1996-97 - the bite will have to be centred on subsidies and grants to states in order to curtail the component. This conflicts with the objective of the United Front government to transfer more resources to the states and to help vulnerable sections of the population. Similarly, most of the increase in consumption expenditures in 1996-97 comes from provisions for likely revisions of salaries and pensionary benefits (by Rs 4,000 crore over last year) and the National Programme of Nutritional Support to Primary Education (Rs 788.21 crore over last year), both of which do not give scope for reductions. It is no wonder then that the finance minister has taken the step of postponing a decision on this important matter with the hope that the Expenditure Commission will be able to build a consensus on the matter. It is easier. however, to have consensus on taxation when all tax rates are to be reduced and so in absolute terms everybody gains. When not all expenditures are to be reduced, however, some interest that is represented in the agenda of a political party will not be promoted and the resistance this generates will make it hard to attain consensus. With a coalition of political parties sharing power the veto is a more credible blocking strategy when some interest is threatened and that makes expenditure compression much more difficult. It seems then that expenditure management in a way that will promote the capital expenditures of government will not be forthcoming.

The finance minister realises this and so has resorted to the strategy of making funds available for capital expenditures, especially infrastructure, through raising more resources and attempting to garner extra-budgetary support rather than through expenditure management. To further this a 2 per cent special customs duty on imports has been proposed which is expected to raise Rs 1,600 crore in the current year and this money will be used for infrastructure development. At the margin this measure will raise the price of imported inputs and reduce the competitiveness of Indian industry. To the extent, however, that the resources so raised increase infrastructure investment and this crowds in private investment and improves the cost efficiency of production, the escalation in input costs will be neutralised. Second, an infrastructure development finance company is to be established with an authorised capital of Rs 5,000 crore (the largest investment in a public sector company since the reforms period) with contributions from the finance tomistry, RBI, and financial institutions. Third, Rs 200 crore has been set aside for the National Highways Authority for building and maintaining national highways. This comes at a time when the capital expenditure on roads and bridges had declined in the last year. Financial provisions have been made for irrigation, soil conservation and watershed management in the agricultural sector. The fourth measure is an indirect measure in that it gives no direct resources to the government but provides an incentive to the private sector to invest in infrastructure through tax rebates on the proceeds from investments in equity shares and debentures that are used to create

new infrastructure facilities, or to generate or distribute power. India spent much less as a proportion of GDP than other developing countries in the 1980s on infrastructure investment and the evidence is strong that infrastructure investment crowds-in private investment [Serven 1996]. The impact of these measures should therefore be favourable in improving the resource allocation towards investment expenditures.

On the revenue side of the budget there have been wide-ranging cuts in customs and excise in the spirit of continuing the tax reforms. The share of direct taxes in the centre's tax revenues has increased from 15 86 per cent in 1990-91 to a budgeted 26 19 percent in 1996-97 This is a significant increase from the average of 16 39 per cent in the pre-reforms period. The corporation tax has shown buoyancy being 12 41 per cent of the centre's net tax revenue in 1990 91 and increasing to a budgeted 19 67 per cent in 1996-97 (Table 2) Similarly the income tax share has improved from 2.91 per cent in 1990-91 to 5 07 per cent in 1996-97 The increased share of direct taxes has however not compensated for the fall in indirect tax revenues and the share of centre's net tax revenue in GDP which averaged 8-29 per cent in the pre-reforms period fell to 7.52 per cent in the reforms period (Table 2) Hence the endeavour of the Tax Reforms Committee to enhance the income elasticity of the tax system has not materialised as yet It is noteworthy that customs duties which had come down from 48 03 per cent of the centre's tax revenues in 1990 91 to 39 71 per cent in 1994-95 are budgeted to go up to 45 77 per cent in 1996 97 and this incre ased reliance on customs (due to higher imports) and the depreciating rupee) is reducing the contributions of the two major direct taxes - the corporation tax and the income tax (Table 2) It is a well known result in fiscal theory that indirect taxes exert a greater deflationary impact on the economy than do equal yielding direct tixes [Peston 1971] D'Souza 1996] and so this drift in the substitution of direct taxes by customs duties has negative implications for growth

This budget has halved the surcharge on corporate tax - a measure that will benefit all companies - but in an attempt to reduce the "laxity in the tax system has introduced a 'minimum alternate tax (MAT) The finance minister instead of directly tackling this laxity which enables companies to avoid paying taxes by using the investment exemptions and depreciation allowances in the tax code has sought to indirectly resolve the problem by introducing the MAT Many zero tax paying con , anies (Reliance SAIL Tisco) had earlier capitalised indefinitely on unabsorbed depreciation by carrying it forward and setting it off against future income and this provision has been now

plugged Prima facie it seems that equity has been promoted in the sense that there is no discrimination that allows a distinction between corporations that pay and those that don't pay taxes Economic thinking on the matter is a little more sophisticated. The general equilibrium impact following Harberger (1962) results in capital in the industry newly taxed now having to cover the costs of the tax as well as provide a return to the owners of capital. This results in a rise in the relative price of the industry along with a fall in its output and an outflow of capital from the industry. The wage rate falls (rises) if demand for the industry's output is price elastic (inelastic) and factor substitution in the industry is inelastic (elastic). It is quite possible then that labour will bear a greater share of the burden than otherwise would be the case and this is inequitable

Some of the impact of the introduction of the MA I will be offset by other tax reductions like the halving of the corporate tax suicharge The tax on long-term capital gains for dome tic companies has been reduced from 30 per cent to 20 per cent, bringing it into line with the tax on foreign companies Customs duties on chemicals metals, plastics, electronic and telecom equipment, edible oils allopathic medicine, and yarn have been reduced. Moreover, over the next two years the number of excise duty rates will be reduced from eleven to four and a system of self a sessment for the levy of excise duty has been introduced. In terms of growth impact the effect of MA1 depends on the alternative uses of funds (apital in the former zero tax companies now has to make provisions for MAT which will transfer resources to the government instead of being used to further capital accumulation within the firm. To the extent that these resources are used by the government for infrastructure investments that directly promote private investment or to reduce the fiscal deficit which indirectly raises investment through a reduction in interest rates the impact will be growth promoting provided such investments in absolute terms can more than substitute for those which were undertaken by funds provided as a result of the investment provisions and depreciation allowances that were earlier not diverted to MAT

The amendment to the Companies Act of 1956 in order to permit non-voting shares up to 25 per cent of the issued equity capital will create obstacles to the natural evolutionary process of the growth and decay of firms The idea that takeovers of domestic firms should be constrained ignores the role of takeovers in an era of slow growth which calls for the radical restructuring of industries so as to enhance productivity. Takeovers often do the job of revamping old production practices and management strategies that are no longer viable and that too in an orderly manner rather than through the costly exit of the firm as it gradually decays in a competitive environment. More importantly however, such a legislation implicitly and talsely assumes that the board of directors of a company is altruistically motivated and always acts in the interests of shareholders and nevertog reserve the interests of managers or their own positions as board members

It also does not appleciate that the essence of the arrangement between a principal (stockholder) and an agent (managers and board of directors) is that the former hire the latter to take some actions on his or her behalf. The essence of this contract is the co operative arrangement between the principal and agent whereby the principal retains control rights over the firm but delegates a wide range of decision right regarding production the hiring of labour, ctc, to the agent. The non-voting share negates this benefit of specialisation by effectively passing on control rights as well to the agent who to the extent he is not altrus ac will not promote the interests of the principal Agents would use this instrument to insulate themselves from the discipline of the outside market for control at the expense of the

shareholders of the firm and this has a negative impact on the efficiency of the economy. Most importantly it violates the fundamental basis of the contract between a principal and agent by giving to the agent the right which properly belongs to the principal—i e, the right to change the control aspect of the contract by preventing the right of the principal (stockholder) from firing the agent. This raises a barrier in the efficiency of the contract between shareholders and managements with negative consequences for growth.

Non-voting shares will also allow a dilution of the norm in certain areas of economic activity whereby foreign firms' equity participation is limited. Currently foreign firms are restricted to keep their equity up to 50 per cent in the mining sector and 49 per cent in the telecom sector. Foreign financial institutions are allowed 75 per cent foreign equity with a condition that this equity should be at least \$ 5 million and so with the introduction of 25 per cent nonvoting shares foreign financial service companies will be given de facto control over the firm. Several foreign firms have been claiming that they find it difficult to locate Indian partners with whom they can participate in their proposed ventures here.2 What foreign firms have in essence been claiming is that there are transaction costs to entering into a contract which locks them into a relationship with Indian firms as such contracts by their very nature are incomplete and leave out many contingencies. There are four types of costs associated with longterm contracting [Hart and Holmstrom 1987]: (1) the costs of anticipating the various eventualities that may occur, (2) the cost of deciding and reaching agreement on how to deal with such eventualities, (3) the cost of writing the contract in a way that is sufficiently clear to be enforceable, and (4) the legal cost of enforcement. When contracting costs are high and long-term contracts are difficult, Hart and Moore (1990) show that efficiency is sensitive to who owns the physical assets that are used in production - specifically, complementary assets such as organisational styles of functioning as regards the co-ordination of production activities and the means of production should be owned together. The government should thus do away with the insistence on joint ventures; once of course the desirability of foreign investment has been established) and instead regulate foreign firms in terms of their exports, minimum setup equity. etc., and not facilitate their entry through the policy of non-voting shares.

П

The finance minister believes that the "economy is on a high growth curve" and that in order to remain on that curve we need

more reforms and not less. The Disinvestment Commission has been set up, an expert committee to rewrite the Income-Tax Act of 1961 has been announced, an Expenditure Management and Reforms Commission will soon be announced as well as a committee to rewrite the Companies Act, 1956, a discussion paper on subsidies will be presented soon, and details of a restructured PDS will be announced soon. Meanwhile this budget has continued the policy of wideranging cuts in customs and excise duties with the aim of furthering tax reforms - the reforms that the previous government will be remembered for. The tax reforms are intended to subscribe to the objective of reactivating investment and thus getting the economy on to a higher growth path through the following mechanism. The impact of the reductions in customs and excise duties would be to reduce the after-tax prices of a whole range of commodities and that would bring down inflation. With these declining prices exports would become more competitive and foreign demand would increase and in the home market as well consumers would benefit from the reduced prices and be induced to increase domestic demand. This would not only increase capacity utilisation, but entrepreneurs noting the pick-up in demand would invest more in capital goods by the workings of the mechanism of an accelerator process. The cut in taxes thus kills two birds simultaneously - inflation and unemployment. Moreover various other measures, like reducing the tariffs on capital goods imports, allowing firms to take credit for excises paid on purchases of equipment, and unifying and reducing the tax on corporate incomes, were implemented to reduce the user cost of capital and directly boost investment.

In order to understand what conditions make it-possible for tax reforms to contribute to growth we use a simple macro-economic model. The government has three target variables - the level of output, the price level, and the balance of trade surplus. Given the debate and the lack of agreement about the assignment pattern of policy instruments to various targets and the trade-offs between these targets in developing countries (Ross 1988], we concentrate on those conditions where none of the targets are fully satisfied. This less demanding method has the advantage of generality as various schools of thought can be accommodated within its ambit. Whatever values the government chooses for the three above-mentioned target variables, the following goods market equilibrium must hold for the economy:

$$S(Y^d) + T(Y,t) = I(r,g,Y) + G(Y) + B(P,Y)$$

vhere

$$0 < S_{\gamma^d} < 1$$
;  $T_{\gamma}$ ,  $T_{i} > 0$ ;  $I_{r} < 0$ ;  $I_{g} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I_{\gamma} > 0$ ;  $I$ 

Savings (S) is a positive function of disposable income,  $Y^4$ , where  $Y^4 = Y - T$ . As the movements in the interest rate in India are sluggish, and interest rates in the organised sector of the money market are generally sticky [Pandit 1991], the rate of interest has no impact on the magnitude of savings which is determined mainly by disposable income.' We postulate total tax revenue (T) to rise with increases in aggregate output (Y) and an index of tax rates (t). Investment (I) depends negatively on the real rate of interest (r), and positively on aggregate output (Y) and government capital expenditures (g). Government expenditure (G) which is

negatively related to output<sup>4</sup> has two components. Government consumption expenditure (c) is a fraction of total government spending and equals  $(1-\alpha)G$ . Government investment expenditure (g) equals  $\alpha G$ . Most tests for India show that public investment (especially infrastructure investment) crowds-in private investment. Hence, an increase in public investment expenditure (g) increases private investment. The balance of trade (B) is just exports minus imports measured in units of the domestic good and is related negatively to the domestic price level (P) and total output.<sup>5</sup>

The price level of the economy (P) obtains from the following general relationship:

$$P = P(Y,t) \qquad ...(2)$$

where,  $P_v$ ,  $P_i > 0$ .

There are many ways in which the positive relationship between output and the price level can be justified. One standard argument is that if money wages are sticky and diminishing returns to variable factors prevails, any increase in output will result in a rise in the price level. On the other hand, if there is an increase in output that is accompanied by the slack in the labour market tightening, the bargaining power of labour improves which translates into demands for higher money wages that get passed on as higher prices as in a conflicting claims theory of inflation [Rowthorn 1977; Patnaik 1986; Kumar 1986].

That taxes have price-inflating effects is the notion captured by the derivative P. Again there are several well known mechanisms at work here. Increases in indirect taxes are known to have an immediate cost-push effect on prices. Also, increases in either direct or indirect taxes may lead to wage letaliation as income earners attempt to re-establish their relative income earning parities [Dernberg 1974, Hicks 1975; Kumar

1983; D'Souza 1992] Yet another mechanism is that proposed by Mankiw (1987) who posits two revenue sources to finance government expenditures – the inflation tax and tax rates on output. Both taxes are distortionary and impose a welfare cost that is increasing on their rates of taxation and so at the optimum the marginal cost of each tax has to be equated in every period.

This implies that as government expenditure changes, inflation and non-inflation tax rates move together.

To study the effect of tax cuts on the target variables identified — the price level, the balance of trade, and the level of output — we construct iso-price, iso-balance-of-trade and iso-output lines in (r,t) space which depict constant levels of the target variables. To do so we totally differentiate equations (1) and (2) and solve for dP and dY. To derive the iso-output equation we then set dY = 0 and obtain

$$\frac{d\mathbf{r}}{dt}\bigg|_{\mathbf{d}\mathbf{v}=0} = \frac{\mathbf{T}_{t}(1-\mathbf{S}_{\mathbf{v}}\mathbf{d})-\mathbf{B}_{p}\mathbf{P}_{t}}{\mathbf{I}_{r}} < 0 \qquad ...(3)$$

The reason for the downward slope of the iso-output curves is easy to see. A reduction of tax rates has two effects. One is that it increases disposable income and hence the consumption expenditure that stimulates demand. The other effect is of a reduction in the price level through (2) which makes exports more competitive and boosts foreign demand whilst increasing the surplus in the balance of trade. However, a reduction in tax rates must be accompanied by a rise in interest rates in order for the same level of output to prevail and that entails a reduction in investment which causes the iso-output

Notes P. Provisional Estimate.

Figures in square brackets are shares of Net Household Financial Asset savings. Source Report on Currency and Finance, RBI, 1994-95.

T: Tentative Estimate.

curve to have a negative slope. As for a fixed value of t smaller values of r will result in higher investments, it follows that iso-output lines representing higher levels of output must be closer to the origin.

Similarly, we can derive the equation for the iso-price line by setting dP=0 to yield

$$\frac{dr}{dt}\bigg|_{dP=0} = \frac{T_{i}(I - S_{vd}) + \frac{P_{i}}{P_{i}}}{+ T_{v} - (1 + \alpha I_{g})} \frac{P_{i}}{G_{v} - B_{v}} \{S_{vd} (1 - \Gamma_{v}) + T_{v} - (1 + \alpha I_{g}) G_{v} - B_{v}\}}{I_{i}} ...(4)$$

The iso-price lines can be positively or negatively sloped depending on how strong are the demand inflating effects relative to the demand deflating effects. The demand inflating effects that must be countered by a decrease in investment in order for the economy to remain on the same iso-price line are the increase in consumption and investment as a result of the fall in the tax, i.e.,  $T_i(1-S_{\gamma^d}) + \frac{P_i}{P_{\gamma}}I_{\gamma}$ . The demand-deflating

effects are the increase in savings and tax revenues amongst other factors located in the curly bracket that come into play as a result of the fall in the tax generating a rise in output so as to keep the price from changing, i e,

$$\{\frac{P_{i}S_{v}i(1-T_{v})+T_{v}-B_{v}-(1+\alpha I_{s})G_{v}\}.$$
 The

deterioration in the foreign trade balance is caused by an increased domestic demand which results in a rise in imports or a fall in exports as output is diverted to the domestic market. The iso-price lines will slope upwards the greater are the demand-deflating effects relative to the demand-inflating effects. Also, any movement upwards along a particular iso-output line implies a fall in tax rates and from (2), lower price levels. Hence, iso-price lines that intersect the vertical axis (r-axis) higher up represent lower price levels.

In a similar fashion we derive the isobalance-of-trade equation by substituting the solutions for dP and dY into the total differential for B(Y,P) and then setting dB=0 to obtain:

to obtain: 
$$\frac{dr}{dt} \bigg|_{dB \to 0} = \frac{T_t(1 - S_{\gamma^d})}{l_r} - \frac{B_p P_t \{ S_{\gamma^d}(1 - T_{\gamma}) + T_{\gamma} - l_{\gamma} - (1 + \alpha l_g) G_{\gamma} \}}{(B_{\gamma} + B_p P_{\gamma}) I_r}$$
 ...(5)

The interpretation of (5) follows along lines similar to that of (4). The graphs of equations (3) to (5) are drawn as Figure 1<sup>8</sup> when the demand-inflating effects dominate the demand-deflating effects in (4) and (5) and in Figure 2 when the reverse holds, i.e., the demand-deflating effects dominate the demand-inflating effects. The circumstances that Figure 1 depicts are more likely to prevail in an economy where some combination of the following hold:-

- (1) The tax revenue induced by the increased domestic aggregate demand as a result of the fall in the tax rates ( $\frac{P_t}{P_y}$  T<sub>y</sub>) is less than the tax revenue lost due to the fall in the tax rate (T<sub>t</sub>).
- (2) Tax cuts are not passed on to consumers but result instead in a rise in the profitmargins of entrepreneurs or in the compensation of employees, i e, P, is small.
- (3) The current level of economic activity is characterised by strong distributive conflicts that results in inflation, i e, P, is large.
- (4) An increase in output does not exert a strong inducement to purchase importables, i e, B, is small.
- (5) There is a large inducement to spend out of the increase in disposable incomes that result from a tax rate reduction.

(6) The fraction of government expenditure devoted to investment is such that its impact on private investment (αl<sub>g</sub>) is limited.

The above six conditions have obtained in the Indian economy in various combinations since the reforms of 1991. The first condition was demonstrated for the post-reforms Indian economy when we noted above that the tax revenue/GDP ratio has fallen. It has been noted by many commentators that even if prices were slashed following a policy announcement of tax cuts they soon reverted back close to their previous levels. The current account/GDP ratio which was -3.2 per cent in 1990-91 and reduced to-0.1 per cent in 1993-94, rose subsequently to -1.6 per cent in 1995-96 reflecting the import compression up to 1993-94. Also, as argued above the Capital expenditure share of government expenditure fell 10 per centage points during the reforms. The Gross domestic savings/GDP ratio also fell from a peak level of 23.65 per cent in 1990-91 to 21.37 per cent in 1993-94 before climbing up again to 24.39 per cent in 1994-95. In Figure I the area DEG represents the economic outcome for a cut in tax rates which results in increased output, lower price levels, and an improvement in the balance of trade surplus. For the economy to move in to this area from point E in Figure I there is the requirement that interest rates rise and accompany the fall in tax rates, i e, a restrictive monetary policy prevails.

The principal monetary policy lever of the Reserve Bank of India in the reforms period due to the absence of well developed secondary markets for government securities has been the minimum lending rate (MLR) by virtue of the commitment to reduce the indicators of 'financial repression' that represented pre-reforms monetary policy instruments: the cash reserve ratio and the statutory liquidity ratio. Despite the reductions in the MLR, the real value of the MLR have been kept high so as to secure a high interest rate spread that will enable banks to recapitalise and so as to limit inflationary credit expansion. The commitment to reducing inflation and the deficit in the balance of trade and to increasing output has resulted in the economic outcome that a reduction in tax rates must be accompanied by a tight monetary policy. The result is that government can only fulfil its targets regarding prices, output, and the balance of trade, by accepting a reduction in investment that accompanies the tight monetary policy. The reduction in gross domestic investment as a percentage of GDP up to 1993-94 is explainable then in terms of the combination of factors prevalent that result in the economic situation depicted by Figure I. Declining capital expenditure by government and high interest rates affected investment expenditure adversely and the slow output growth was unable to counter the effects of these two determinants of investment. Despite an improvement in the gross domestic investment/GDP ratio in 1994-95 which is associated with the higher GDP growth rate in that year, the ratio is still below its value in 1990-91.

The major implication of tax cuts reducing investment expenditure is that there is a reduction of the growth rate. In order for tax policy to not result in such a growth reducing outcome it is necessary for the economic configuration to be given by the representation in Figure 2. This outcome is possible if the iso-balance-of-trade line and the iso-price line are upward sloping resulting in an expansion of the conical-shaped area DEG and the possibility of tax cuts being accompanied by a reduction in the interest rate which then triggers off investment expenditures in the economy. The iso-price line can be upward sloping if distributive conflict and hence inflation is low, there is a surge in imports which widens the trade balance, the savings rate improves, and there is a recovery in the tax revenue/GDP and government capital expenditure/government expenditure ratios. In the period after 1993-94 inflation has come down, there has been a deterioration of the trade balance and the savings rate has gone up. However, due to the tax system not exhibiting an improved income elasticity interest rates have remained high. Even if tax administration and enforcement improves the tax system can be rendered more income clastic with improved economic growth. There is thus a case for policies that increase the role played by the demand-deflating factors so that the isoprice line slopes upwards. The import option though contributing to the demand-deflating factors that enhance the possibility of an economic configuration represented by Figure 2 would not promote our objective if it simultaneously results in a reduction in the balance of trade surplus and so is not an option that recommends itself favourably. Also, often the government is not in a position to ensure that tax cuts are passed on to consumers instead of inflating profit-margins or to control the distributive conflict in the economy. Expenditure reforms so that the share of capital expenditures in total government expenditure increases are doubtful as we argued above and in any case will take time to materialise. Expenditure reforms can also have the effect of resulting in an upward sloping iso-price line and enhancing the possibility of Figure 2 like situation for the economy. At this juncture, given that interest rates have no effects on the volume of savings in the Indian context as we argued earlier, a direct approach that boosts savings is called for.

Household savings in the reforms period has on an average been 79.7 per cent of

. . . . . .

gross domestic savings and accounts for most of the variation in the savings rate. In the reforms period the share of various components in household savings have changed considerably. The share of household savings in physical assets has declined and the share of net financial savings has gone up from 43.62 per cent in 1990-91 to 58.93 per cent in 1994-95. The components of net financial household savings have also changed considerably. Thus, net claims on government and some components of contractual savings (Units of Unit Trust of India) have witnessed declining shares. whereas the component of net currency and bank deposits have been rising. Hence, the data reveal that the savings composition is moving in favour of financial savings and that too in favour of currency and bank deposits followed by contractual savings, mostly in life insurance, pension and provident funds. Even though there may be errors in the estimate of household savings in physical assets given their derivation as a residual in the estimation of total capital formation, the composition of household savings is moving in favour of liquid financial assets.10 It is in enhancing these types of savings by providing tax concessions along with increasing the share of capital expenditure in total government expenditures that will result in the outcome that Figure 2 depicts. This budget makes no attempt to generate higher savings that will make the growth potential of Figure 2 possible and due to its failure on this count will not be able to serve its major objective of getting growth going. And if we cannot sustain growth, then we cannot make dents on poverty and unemployment.

Of course, tax concessions to savings in the form of deductions, exclusions and tax credits implies sacrificing the principles of inclusiveness and transparency that the Tax Reforms Committee laid down as a guideline for policy proposals. The Tax Reforms Committee would view the promotion of tax shelters for savings as contributing to a decline in horizontal equity. That is because identifies income, defined comprehensively as possible as the ideal tax base on which to apply the tenet of taxation according to the ability-to-pay. What we are proposing instead on the basis of the Indian macro-economic situation is that the ideal base for taxation is that income which is not saved. This implies that there is a distinction between people who consume and take out from the societal pool of resources and people who save and so in as much as these savings get converted to investments add to the future pool of the resources of society. Treating all the possible uses of income as equivalent is in our view tantamount to treating people unequally and the Tax Reforms Committee proposals discriminate

against those who promote national savings. Inasmuch as two individuals are equal only to the extent that they have identical tastes. opportunities, and resources, it would imply that two people with the same resources (income) but with different tastes (for present versus future consumption) are by definition unequal. A basic principle of tax theory which is the cousin of the horizontal equity principle is the vertical equity principle which states that unequals should be treated unequally. Inasmuch as those who consume are not the equals of those who save, it is perfectly valid to treat savings from income to a lower rate of taxation and so more favourably than consumption from income. Savings is not just a residual after one subtracts consumption from income. It is a forward-looking activity that expands the pool of resources for investment that enables the introduction of new machinery and technology which reduce costs, widen the market, and expand profitability. Tax policies favouring savings over consumption will make resources available for private investment plans to be implemented and will stimulate economic growth.

#### Notes

- 1 From 1995-96 (RE) a new category of capital expenditures and receipts have been added to the budget in the form of the issue of bonus shares by public sector enterprises to the government. For instance, ONGC issued Rs 1,035 crore as bonus shares in 1995-96 and that has been shown as both a capital expenditure as well as a capital receipt. As we view the budget as expressing the financial position of the government vis-a-vis the rest of the economy we do not include this category of expenditure and receipts. Consequently the total expenditure and receipts of government stands reduced by the amount of the issue of bonus shares
- 2 Credit Lyonnais Securities (Asia) for instance had voiced strong reservations against forming joint ventures with local stock brokers and in its application before the Foreign Investment Promotion Board (FIPB) had stated that there were vast differences between the nature of business, business philosophies and commercial expectations of foreign and local brokers The equity norm was bypassed for the Sony Corporation in 1994 when it was allowed to set up a 100 per cent owned company in India after it made similar claims before the FIPB.
- 3 Other studies for developing countries such as Giovannini (1983) also reveal that interest rates are not significant determinants of savings.
- 4 Taylor (1993) emphasises that a "minimally adequate country model" must include the feature that taxes and other receipts increase more rapidly than the real spending of government when economic activity goes up.
- 5 Weignore the effect of exchange rate changes by considering an insular economy in the sense that the domestic interest rate is determined independently of those prevailing abroad and domestic absorption is not influenced by exchange rate changes.

PT 170 .

5 We are ignoring the Cavallo effect here -1 e, increased interest rates form a mark-up price element which leads to a cost-push effect on prices. See Bruno (1979).

7  $\frac{P}{P_{y}}$  is the expression for the extent of the change in output as a result of the fall in the tax when dP = 0

8 It can easily be verified that  $\frac{dr}{dt_{dP=0}} - \frac{dr}{dt_{dB=0}}$ 

> 0 and this property is reflected in the slope of the iso-price line and iso-balance-of-trade lines in Figure 1.

9 Maninohan Singh had announced on many occasions that any tax cuts not passed on to consumers will invite penal action. These were always made immediately after a budget was presented with no follow-up action.

O Ghosh (1996) argues that the jump in the savings rate in 1994-95 may be due to the increased net factor income from abroad, the savings from which by families of migrants would have got erroneously absorbed in the estimate of gross domestic savings. However, the better savings rate has resulted in all sectors - household, private corporate, and public sectors. The significant event with regard to households is the increased financial intermediation that has resulted.

## INDIAN INSTITUTE OF MANAGEMENT AHMEDABAD

## FELLOW PROGRAMME IN MANAGEMENT

**BEGINNING JULY 1997** 

Recognized as equivalent to a Ph.D. by the Association of Indian Universities and the Ministry of Human Resources Development, Government of India.

### **SPECIALIZATION OFFERED:**

- Agriculture
- Economics
- Information Systems
- Marketing

- Organizational Behaviour
- Personnel and Industrial Relations
- Production and Quantitative Methods
- Public Systems.
- Aims to provide high quality training to students so that they can become distinguished and pioneering teachers, trainers, and researchers in the field of management.
- A majority of the Fellows of the Institute have joined as faculty members in IIMs, and other reputed management institutes in India and abroad. Others are in consulting and corporate sector.

**ELIGIBILITY:** (1) Master's degree in any discipline or equivalent professional qualification with at least 55% marks. (Those appearing for the final Master's degree examination can also apply subject to their completing the examination before joining the programme.) **or** (2) B.E./B.Tech. with at least 60% marks and two years work experience.

FINANCIAL ASSISTANCE • 1996-97 fellowship amount is about Rs. 4000 per month, enough to cover tuition, other academic and basic living expenses • Contingency allowance of Rs. 5000 per annum • Married students get additional assistance • (All amounts are likely to go up during 1997-98.)

## APPLYING FOR FPM REQUIRES COMPLETION OF TWO STEPS.

STEP ONE: Take CAT on Sunday, December 8, 1996 at Centres mentioned in CAT Bulletin. (PGPs from IIMs are exempt from CAT. Applicants residing abroad can give their GMAT score, not older than one year.)

• Last date for issue of CAT Bulletin at the SBI Branches : October 5, 1996

• Last date for receiving completed CAT forms at IIMs : October 14, 1996 STEP TWO: Obtain FPM Application forms free of cost from Programmes Officer (FPM), Indian Institute of Management, Ahmedabad 380 015, after October 15,

1996. You may indicate up to three choices of specialization. Separate FPM application forms have to be filled in for each specialization.

liast date for receiving completed FPM application form(s) at IIMA : December 2, 1996

## Union Budget 1996-97

## **Limits of Resource Mobilisation under Market Conditions**

#### Arun Kumer

Though many concessions have been given to the private sector (including foreign capital), investment and especially the inflow of foreign capital remain uncertain. Even to maintain the current level of investment, more and more concessions may be needed. This creates inequity and problems for resource mobilisation which worsen the budgetary position leading to slow-down of public investment and the capacity to fight poverty.

Market-based solutions to increase investment activity also cause economic fluctuations to increase, resulting in uncertainty and speculative activity whose victims are the poor. They reduce the degree of freedom of the state governments to operate programmes suited to their needs.

THE Union Budget for 1996-97 has come late, presented by the new government which assumed office in June. However, it is hardly different from the interim budget as presented by the previous government in February 1996. In essence, not only does this imply a continuity in policies as spelt out by the previous regime but actually endorses them. This is surprising only to those who expected that the new regime, consisting of forces favouring social justice, would chart a new (alternative) economic path, consistent with the different social and political framework of some of its vocal if not dominant constituents (belonging to Left and socialist hues). However, it has been clear that no alternative path is likely to suddenly emerge with the present conjuncture of political forces [Kumar 1995b] since the ground work for such an alternative path has not been prepared.1

The budget speech of the finance minister in keeping with the rhetoric of the vocal sections of the new regime repeatedly refers to social justice. But many have pointed out since then that words have not been backed with funds from the budget. It was also expected from the new regime dominated as it is by regional parties and forces that the states facing a budgetary crisis would receive funds generously. But this is not so and the budget continues the pattern of the previous year showing no new emphasis [Kumar 1996].

The finance minister has stressed the need to invest in infrastructure, both rural and for the modern sector (power, transport and telecom). Yet here also the funds from the budget are comparable to the allocations last year (in some cases the revised estimates and in others the budget estimates) so that no new thrust can be said to have been given [Kumar 1996]. What then is the finance minister's scheme of things?

He has left resource mobilisation to the market forces to a greater extent than in previous years. Naturally, the question arises whether this would deliver the goods and what would be the consequence of such a policy for the country?

## Budget and Market Forces

#### CONCESSIONS FOR RURAL AREAS

The budget for 1996-97 has not allocated markedly larger funds for the creation of the rural infrastructure or the modern infrastructure but has proposed various measures to encourage private investments in these sectors. For instance, there are announcements regarding the creation of the rural local banks, the Rural Infrastructure Development Fund (RIDF) and state level agriculture development finance institutions. These schemes are supposed to funnel private funds into rural areas for the development of agriculture and rural infrastructure.

The New Economic Policies are supposed to make the financial system viable in the sense of being profitable. So the proposed schemes would be expected to be viable in the above sense. What kind of activities will these be? If such activities existed in the rural areas, would they not have already been financed by the existing financial institutions? Hence the budgetary proposals cannot give a push to the rate of investment in the present structure of rural activities.

Clearly, newer activities are anticipated by the government. These perhaps relate to the new thrusts in agriculture, based on capital-intensive farming, like horticulture and floriculture and food processing. Other concessions to rural areas announced in the budget point in the same direction since they are for power tillers, tractors and drip irrigation. The budgetary package is aimed at the rich farmer and to facilitate corporate sector entry into agriculture. It needs to be remembered that there has been pressure in the last few years for the relaxation of the various land ceiling laws so as to enable large farms to come up.

The budget does not focus on the existing activities in agriculture in which the bulk of the rural populace is involved. Hence this segment is unlikely to witness increased profitability and as such will not be able to benefit from the new market-based concessions contained in the budget. The budget proposals can only increase the

existing differentiation in agriculture. It may accelerate the changes in the cropping pattern away from the more traditional crops as corporatisation of agriculture occurs.

Similarly, for rural infrastructure, the schemes that could have fetched market related rates of returns probably have been financed. The real problem lies in the development of activities which would be loss-making in the short run (or even long run) like rural roads, assured drinking water supply, village primary schools, primary health centres, etc. The institutions now proposed to be set up are unlikely to finance these activities. So the need for public investment in rural infrastructure is strong if the bulk of the rural population is to be catered to.

Since the budgetary allocations for rural areas have risen marginally and most of the investments are expected from private capital, the above arguments would suggest that there will be growing differentiation in rural India both in terms of incomes and quality of life.

#### DIRECT TAXES

Direct taxes fall on the income of the well off (currently on the incomes of those who annually earn at least six times the per capitu income). Though salaried persons dominate in numbers, the bulk of these taxes are paid by those with property incomes [Kumar 1994]. Hence direct tax concessions benefit mostly the propertied classes.<sup>2</sup>

The real concessions in the budget are to the corporate sector, like reduction of the surcharge on corporate tax, concessions to investment in infrastructure and R and D, concessions on long-term capital gains and on depreciation provisions. Increased provision under medical insurance is also to boost the corporate hospitals which are coming up in the metropolitan centres.

The creation of a central depository and the steps towards the privatisation and computerisation of the insurance sectors are also likely to benefit the corporate sector through increased availability of funds. The threat of opening up insurance will mean greater market orientation of this sector and result in the shift of funds to where profits are mgn (the corporate sector). Computerisation is a high cost solution as the banking sector has demonstrated, requiring minimum charges to be raised and resulting in pricing out of the markets the less well off. The insurance sector is moving in the same direction in spite of the provision of schemes for the less well off.

Changes are proposed in the Companies Act 1956 but the direction of modification is unclear. Given other indications it can only be to reduce the degree of regulation and control on the corporate sector. Coming at a time when scams relating to the corporate sector and politicians are coming thick and fast and are linked to the freeing of controls on these entities, this bodes ill for the economy.

The corporate sector must have heaved a sigh of relief that there are no measures to unearth their black incomes. If anything, they will be enabled to generate more black incomes. Relaxations in MODVAT procedures and self-assessment can only result in more output evasion and price misdeclaration. In this context it is worth noting that while corporate profits have soared in the last three years, excise collections are rising rather slowly. The finance minister himself suspects that evasion of excise may have increased.

But the big sop to Indian corporate sector is the proposal that they can issue nonvoting shares up to 25 per cent of their issued equity capital. This will reduce the threat of takeover that Indian businesses have faced in the process of expansion. Even in cases of joint ventures with foreigners, Indian partners unable to match the financial muscle of their foreign collaborators are either forced to concede a dominant share to latter or to stall growth. In cases like Maruti, the government has not conceded to the demand of Suzuki and this has led to stagnation in investments. In case of DCM-Daewoo, Daewoo is taking the dominant share by buying out the DCM share.

If 25 per cent of the equity is without voting rights, then it would be easier to maintain the status quo. However, the question arises why should anyone buy shares without voting rights? Clearly, they would be like bonds. As such, they would be purchased only if they offer an assured and higher return than regular equity/bonds. It could even offer a minimum fixed return and a variable part linked to the dividend declared by the company if it is above the minimum guaranteed. Many small investors who in any case have no say in the running of companies may then prefer this instrument to regular equity. Given the attractiveness of the scheme to Indian corporate sector some innovations are likely to be seen in the near future. While the corporate sector has much to be happy with, there is one proposal which they are unhappy about, the Minimum Alternate Tax (MAT).

pay no corporate tax in spite of earning large profits. This has reduced the buoyancy of corporation tax. Companies have been using a plethora of available deductions and concessions to lower their tax liability. MAT is supposed to force companies to pay a minimum rate of tax, 30 per cent of book profits. An exception will be made in case of companies investing in infrastructure, Given the pressures, an exception may also be made for export profits. Hence the phenomenon of zero tax companies will not disappear. It will be slightly more difficult to remain a zero tax company.

Accounting jugglery by clever accountants and tax lawyers along with a large number of concessions and deductions are always available to companies to engage in smart legal tax dodges. For instance, companies present one set of accounts for declaring dividends to their shareholders and another set of accounts for paying taxes. The idea is to maximise the former while minimising the latter.

The issue is why does the government not eliminate this (legal) dual accounting practice? The other issue is that the government can eliminate most of the deductions and concessions presently allowed so as to simplify the tax regime which would make black income generation more difficult. While MAT may bring in a thousand crores of additional revenue, checking black income generation by the corporate sector may bring in many times more taxes [Kumar 1994]. In brief, while the introduction of MAT is a positive step it is not what is needed since it continues to keep the tax structure complex which enables black incomes to be generated - a far bigger problem. MAT seems to be a diversion so that the government does not have to traverse the real path of corporate taxation.

#### FDI AND FIL

Foreign capital continues to obtain concessions from budget to budget. It has been argued that this is required since the country is running a current account deficit and will continue to do so in the near future because of (a) the large debt and interest payment obligations, and (b) imports exceeding exports (to enable technological upgradation). Thus, private capital inflows are seen to be essential to cover the current account deficit and maintain a healthy reserves position.

This is presented as the rationale for making India attractive for both Foreign Institutional Investors (FII) and Foreign Direct Investment (FDI). The finance minister has proposed that India should aim at getting around \$ 10 bn of FDI annually. To obtain this order of investment, various concessions have had to be given and more are seen to be necessary. It is argued that no distinction need be drawn between essential and inessential goods since from the point of view of allocative efficiency there is no difference between them. This

is the justification for import of low priority goods or their production in the economy by foreign capital even if this pre-empts resources from essential activities.

It is even argued that labour-intensive industry set up by FDI should be preferred to high-technology low-employment-generating investment. Hence FDI in potato chips is thought to be better than in microchips (electronics). However, this argument is flawed since the comparison is invalid. While technology for potato chips is indigenously available that for micro-chips is not. So the economy need not bear an additional burden for the former but may choose to do so for the sake of the latter.

Ceteris paribus, the profit earned on potato chips will increase the current account deficit when the dividend is repatriated. To cover this, capital would have to be attracted which would require additional concessions. The dividend servicing requirements of FDI are likely to be much higher than the interest payments on borrowings in the foreign money markets (not that one should borrow for inessential imports or production) so that the outflow can be substantial. Finally, while micro-chips are likely to increase production and productivity elsewhere, potato chips are unlikely to have any such linkage.

Further, if demand is stagnant, production based on FDI may be at the expense of local production. Since FDI using more modern technology tends to be less labour-intensive than the indigenous existing technology, overall employment may decline rather than rise. This may be the case with, say, Kellog corn flakes. With regard to the new breed of automobiles based on a high import content, in comparison with the old Ambassador, Padmini, NE 118, etc, there will be a double effect so that the employment elasticity is likely to be very low.

Finally, concessions to foreign capital to cover the rise in the current account deficit, would result in lower tax buoyancy, ceteris paribus, and higher revenue and fiscal deficits. To keep government's borrowing requirements low, this would force a cut in other essential expenditures or a slow-down in the growth of public investments.

Incurring all these costs may be justified tor the production of essential items but not for inessential goods. The point remains how does one upgrade the quality of goods using indigenous technology. But would one chop off an arm to get rid of the pain in a pulled muscle?

Since the new government has come to office, the pace of clearances for FDI in incessential goods has increased. The shifting of Foreign Investment Promotion Board (FIPB) from the prime minister's office to the industries ministry and higher limit of automatic clearances seem to have done the trick.<sup>5</sup>

FIIs are being allowed greater flexibility in their operations in the secondary stock markets. This has Indian industry worried since this makes a hostile take over easier Along with the GDRs available in the international markets which can be converted into the underlying equity and which is on top of the 24 per cent purchase of equity allowed in the Indian stock markets, the control of foreign investors can easily exceed 50 per cent. Hence if it suits a foreign entity, it can turn many a blue chip Indian companies into foreign-controlled companies.

The ministry of finance has denied such a possibility. The argument offered is that the overall limit of 24 per cent will hold for the total FII holding. If this is the case, turther large investment by FIIs in Indian blue chips is unlikely since these companies have also issued GDRs. In fact, FIIs may start disinvestment in some of the blue chips to meet the 10 per cent and the overal? 24 per cent limits. Consequently, the inflow of FII funds is likely to be uncertain and this may affect the stock markets.

#### II Market-Based Solutions and Capital

The discussion in the previous section suggests that the Union Budget for 1996-97 has offered many concessions to capital to develop the rural areas and to promote industry. The budget has simultaneously decomphasised the role of the Plan (therefore the budget or direct state intervention) in achieving these goals. This is in keeping with the trends of the past five budgets since 1991 and the interim budget of 1996. It reflects the idea that supply side responses can be generated through concessions to capital [see Kumar 1995a].

In pre Keynesian times this used to be the state of affairs with animal spirits guiding investments and capitalist economies went through fluctuations—the level of economic activity went up and down. This involved waste of resources since capital which was installed in one boom period remained potential to be utilised in the next boom [Kalecki 1971]. During the depression, the economy underutilises resources, including labour, this has a social cost, over and above the economic cost.

With slow down in investments and decline in profits, the most risky investment research and development slows down. While it is true that failure of firms during the depression and depreciation of plant and equipment presents newer investment opportunities, the latter process is slower than during the boom. It is unclear that supply side responses work countercyclically and if this is correct then they cannot generate a sustain ed boom. If an economy dependent largely on the market mechanism experiences a sustained boom the causes may lie elsewhere.

Of course, it is unclear that the Indian economy experiencing a high rate of growth in the last two years has entered a period of sustained boom. The current growth is based

on various factors none of which relates to the supply side response but more likely depend on cyclical factors and good monsoons [Alternative Survey Group 1995 27]

It has been argued in Shankar (1996 53 55) that the Indian economy is experiencing large fluctuations in various markets – for instance, in the market for foreign exchange call money market, real estate markets and the stock market. All these signal uncertainty and in such situations investment becomes risky and economic agents prefer to remain liquid.

Uncertainty lends itself to speculative activity. Quick profits can be made on guessing the direction of movements in various variables. In relation to this, the returns on industrial investments seem insignificant hence less desirable. With economic agents preferring to remain liquid, return flow of funds into banks slows down and the velocity of circulation of money drops. Interest rates remain high and industry complains of shortage of funds. This again sets back long term investments.

Slow down in the rate of rise of public investments lowers additional demand generation and concessions aggravate this problem [Kumar 1995a]. Hence long run growth in deman! slows down and lowers the trend growth rate. This is consistent with periods of boom, like at present.

## III Consequences for the Poor

Supply side responses generated through concessions to capital tend to aggravate inequities. Since the state of the market depends on the whims of the actors in the market they are able to extract concessions from the state and obtain a larger share of the national cake. This tends to translate into a more skewed individual income distribution.

For instance as argued earlier, if in rural India market based solutions to rural infrastructure are sought to be implemented this may benefit the rich tarmers or the corporate sector wishing to enter rural areas but it would leave the bulk of the rural population worse off

The current increase in the rate of growth in the economy is based on a high growth rate in the industrial sector. This sector has also been known as the least employment intensive The situation could only have worsened since 1991 due to the slow down in employment generation in the public sector, upgradation in technology and mergers in the private sector. Indications are that production is moving to less labour intensive modes and in many of the high growth areas to more import-intensive products so that employment generation cannot be very buoyant in spite of the economic boom. This has a direct impact on persistence of poverty which may ilso be getting regionally entrenched

The current budget will also accelerate the rate of inflation The changes in indirect tax rates will yield a net of Rs 1,700 crore. The public sector is expected to raise substantially higher resources for investments and this would require increases in administered prices. Food prices are set to rise since the subsidy for food has not been raised commensurate with the promises of increases in public distribution. As a consequence of these features of the budget prices of many basic commodities, like steel and oal, are set to increase. Add to this the pic budget increases in petro goods prices and rise in railway freight rates and this would constitute a step up in the inflationary potential due to the cascading effect. A rise in the rate of inflation would adversely affect workers in the unorganised sectors

In short market-based solutions which limit budgetary resources force a rise in the inflationary potential in the economy and limit additional employment generation and, therefore help perpetuate poverty or aggravate it. This has been recognised even by the proponents of the New Economic Policies who advocate a safety net to counter poverty.

The same resource shortage forces direct real expenditures from the union budget on employment generation and the social sectors to stagnate or rise at a rate which is inadequate to the needs. The current budget illustrates this. It may be argued that a mijor portion of expenditures on the social sectors are through the states but since they face a resource crunch due to inadequate increases in transfers from the centre, they realso unable to take care of their poor (even if they wanted to)

Poverty has regional dimensic as and can be best tackled through local efforts. The kind of employment generation required to deal with poverty differs from state to state. Hence the involvement of the states in poverty alleviation is essential but if their resources are inadequate then this task can only remain incomplete.

## MARKETS AND THE PEOPLE

In Andhra Pradesh and Haryana the poor, and specially women have identified drinking is a cause of their poverty. Further in Andhra Pradesh, the people voted for cheap rice which calls for subsidy. The state governments in these two states have implemented these programmes and lost substantial revenues which were collected through state excise duties on liquor. Since the centre refused to bail them out these states have been faced with a serious budgetary crisis. In Ardhra Pradesh the crisis was deeper since it not only lost revenues but needed to find additional resources for subsidised supply of rice.

This has raised an important issue namely, in a democracy the will of the people as expressed through elections can come into contradiction with the dictates of markets

The market-based supply side response desired by the central government has forced reduced resource mobilisation by it and led to its inability to transfer more resources to the states. This is standing in the way of some states implementing the will of their people. The issue is important in the context of (a) the argument that markets promote democracy – through enlarging choices and (b) the question if the will of the people should be subservient to the markets.

It is not that the centre is obliged to give resources to one state at the expense of another. The former is required to collect resources on behalf of the states and transfer them so that they can fulfil their people's aspirations. The question is how should resources be raised for programmes which people may want and, more specifically, does prohibition which is a social bad, according to the perceptions of the people of Andhra and Haryana, lead to a reduction in resources.

The centre has been raising resources in a manner that the states get a small share of it. In 1995-96, the centre got an additional revenue of Rs 10,000 crore above the budget estimates but the states got nothing additional. The states are supposed to get 80 per cent of the income tax collections and, due to the substantial black economy, the centre is estimated to collect only 10 per cent of what it could collect. If the centre was serious about tackling the black economy the states could get twice the funds that they get at present from the centre. However, under the new regime of supply side response, income tax collections are supposed to be deemphasised to give incentive.

Indications are that the size of the black economy has increased since 1991. Inflow of gold into the economy has not only gone up but its smuggling is no less. The misuse of VABAL indicates continued over- and under-involcing of imports and exports. The lack of buoyancy in excise duties in spite of rapid rise in industrial production and corporate profits indicates misuse of MODVAT for excise evasion.

The financial sector scam, the PSU disinvestment scam, the sugar scam, the telecom scam and the fertiliser scam all indicate the the scale of black income generation has only increased with the New Economic Policies, Large regional scams in Bihar and Orissa have also been talked of. Businesses with reduced scrutiny and restraint from the state are obviously less afraid of generating black incomes. They have found newer means of making illegal incomes and now hiding them is far easier under the shroud of business secrecy. With the opening up of the economy, it is easier to take money abroad and then bring it back to avail of tax concessions. Hence there is an incentive to generate black incomes and recycle them if necessary through this route.

In brief, the centre could have raised a lot more resources for the states if it had so wished and the market-finked policies are aggravating the problems further. Why don't the states themselves raise more resources? After all, for families where drinking has declined, the resource position may have improved. Expenditures on other items of consumption may have increased — food, clothing, etc. With subsidised rice, the family budget must enable a larger purchase of non-food items. Even the productivity of those who have reduced drinking may have risen. In brief, reduced drinking may have released resources for more productive activities.

The excise duties on goods whose demand may have increased are typically lower than on liquor and accrue to the centre with the states getting only 45 per cent share. Hence the states are bound to lose revenues which can only be made up if they get larger transfers. The states can collect more of resources it they are willing to tax their rich. But then the tax differentials amongst the states may rise and lead to loss of revenue through migration, etc.

States implementing prohibition may also have to create additional employment for those who were formerly employed in the liquor business. This requires more investment resources. Hence there is no escaping the fact that a state wishing to play an active social and political role must also be active in restructuring the economic sphere.

### IV Conclusion

Not that market based solutions cannot generate additional investments but the above analysis points to the difficulties in its way. Even though many concessions have been granted to the private sector (including FIIs and FDI), investments and specially the inflow of foreign capital remain uncertain. Even to maintain the current level of investments, more and more concessions may be needed which creates inequity and problems for resource mobilisation which worsen the budgetary position leading to a slow-down in public investment and the capacity to fight poverty.

The market-based solution to increased investment activity in the economy causes economic fluctuations to increase resulting in uncertainty and speculative activity whose victims are the poor. It reduces the degrees of freedom of the state governments to operate programmes suited to their needs. The free play of the markets by circumscribing the choices available to a majority of the people stands in opposition to democracy.

#### **Notes**

1 Even though several alternatives have been proposed in the last five years since the New Economic Policies were launched in 1991, none has had the social support that is essential to claim that an alternative exists. Many critiques have been offered but nothing concrete has emerged out of these since they stop short

of spelling out an alternative path. One such critique is the Alternative Economic Survey of 1995.

While some of the centrist political parties are perfectly happy to pursue the New Economic Policies now that they are in power and this was expected of them since their criticism seemed only to gain power, it is the Left which finds itself trapped. For the first time it is sharing power at the centre and has no alternative policies to propose and for lack of anything better is forced to agree to what is going on.

2 No doubt the budget proposes concessions to cancer and AIDS patients, trade unions, senior citizens, etc. but these are for basically cosmetic reasons. Some benefits also accrue to the salaried classes but these are minor in the overall calculations. In Kumar (1994) it has been argued that the real burden of taxation on the salaried classes is indirect taxation. They would benefit by a reduction in excise taxes and an increase in direct taxation. Unfortunately, even the Left does not appreciate this point and has demanded a reduction in

3 It is estimated that there are over a thousand zero tax companies. Even though the marginal rate of tax has been about 45 per cent, the average rate of tax paid by the corporate sector has been less than half this figure.

direct taxes.

4 An entire package of policies is needed to make industry conscious of R and D and quality and act on these aspects. Such a package is given in Kumar (1994) based on taxation, concessions, increased internal competition and limited protection.

5 At one point it appeared that entry of foreign capital into print media had also been approved but it turned out to be a trial balloon and the government did not press with its decision.

6 The government has also announced the take over code and suggested that the Indian financial institutions may disinvest their substantial shareholding in blue chips.

7 In Kumar (1994) several feasible ways are mentioned for raising resources from the rich. The White Paper issued by the Andhra Pradesh government in June 1996 shows the crisis in the state's finances but stops short of indicating ways of raising revenues. It is implied that prohibition should be lifted and subsidy to rice drastically reduced.

# Secularism: Bench-Marked by Hindu Right

## Brenda Cossman Ratna Kapur

The recent series of Supreme Court judgments in cases against elected representatives of the Shiv Sena-BJP government in Mahaiashtra has delivered a mixed message. While finding several of the accused guilty of corrupt electoral practices, the court has given legal sanction to the Hindu right's ideology of hindutva as well as to its discursive strategy of hijacking secularism for its own unsecular agenda. This paper examines the court's decisions in detail and shows how it has erred in failing to take into account the political context in which the concepts of hindutva and secularism have been evolved by the right.

IN a recent series of judgments involving the prosecution of elected representatives of the Shiv-Sena-BJP government in Maharashtra for corrupt practices under the Representation of the People Act, the Supreme Court of India has delivered a mixed message to the cause of secularism On the one hand, the court found several of the accused - most notably the Shiv Sena leader Bal Thackeray - guilty of both appealing to religion to gain votes, and of promoting religious enmity and hatred But, the court also held that 'hindutva', the ideological lynchpin of the Hindu right's efforts to establish a Hindu rashtra (Hindu state), simply represented 'a way of life in the subcontinent', and was not in and of itself a violation of the Representation of the People Act 1951. The decisions have provoked both celebration and outrage. The Hindu right has heralded the decision as ushering in a new era of hindutva, while the democratic secular forces committed to fighting the communalisation of political and social life by the Hindu right have routinely denounced the decision

In this essay, we examine two deeply problematic aspects of the Supreme Court's judgment which remain, notwithstanding the court's claim to have clarified its decision (1) the conclusion on the meaning of hindutva, and (2) the conclusion on the secular character of the speeches of the Hindu right First, we argue that the Supreme Court erred in concluding that hindutva constitutes a way of life of the people of the subcontinent, and that its deployment constitutes neither a violation of the prohibition on appeal to religion to gain votes nor a violation of the prohibition on promoting religious enmity and hatred. We argue that the Supreme Court has erred in eliding its discussion of the meaning of Hinduism with the meaning of hindutva, and that its conclusions on hindutva are without legal precedent or authority Moreover, by examining the historical and political context within which the concept of hindutva has acquired meaning, we argue that hindutva cannot be separated from its appeal to religion, nor from its assault on the legitimacy of religious minorities

Second, we argue that the Supreme Court '

has ened in its acceptance of the secular nature of the speeches of the Hindu right By examining the broader discursive struggles over the meaning of secularism in India, we illustrate the extent to which the Supreme Court s conclusion has effectively vindicated the protoundly anti-secular vision of secularism that the Hindu right has long been trying to promote In so doing, we challenge the Supreme Court's views that there is nothing inconsistent between its conclusions in the Manohar Joshi case, and its earlier decisions, most notably in the Bommai case. We further argue that the conclusion in the hindutva case, and the significant victory it represents for the Hindu right, has been ficilitated by the failure to take these discursive strategies of the Hindu right on board and to pay sufficient attention to the specific manipulations of secularism occurring at its hands. As we have argued elsewhere the Hindu right has hijacked the dominant understanding of secularism as the equal respect of all religions to promote its vision of hindutva and its agendic et establishing a Hindu state In its hands, the equal respect of all religions becomes a tool for attacking the rights of minority religious communities. Its emphasis on formal equality, that is, on the formal equal treatment of all religions operates as an unmodified majoritarianism whereby the majority Hindu community becomes the norm against which all others are to be judged and treated 4 After reviewing this discursive strategy, we argue that in failing to pay sufficient attention to these strategies and particularly, in failing to more clearly articulate an alternative vision of equality that must inform the concept of the equal respect of all religions the forces of democratic secularism including the Supreme Court have left the door ajar, and unwittingly allowed the Hindu right to continue their discursive strategy of hijacking secularism for their own very unsecul ir agenda

## I Supreme Court Hindutva Judgments

In the cases of Manohar Joshi v Nitin Bhaurao Patil and eleven others, the election

of Shiv Sena/BJP candidates in the December 1987 state elections in Maharashtra werechallenged as having committed corrupt practices in violation of section 123 of the Representation of People's Act, 1951. Section 123(3) of the act prohibits candidates from any appeal to his or her religion, race, caste, community or language to further his or her prospect for election, or for prejudicially affecting the election of any other candidate \* Section 123(3A) prohibits candidates from promoting "feelings of enmity or hatred between different classes of the citizens of India on grounds of religion, race, caste, community or language" for the purposes of gaining votes, or prejudicially affecting the votes of another candidate? Charges were brought against 12 members of the Hindu right, including Thackeray, leader of the Shiv Sena and Manohar Joshi. chief minister of Manarashtra, for violating these provisions \*

At the Supreme Court, the main opinion on the interpretation of the Representation of the People Act, and whether an appeal to hindutva constituted a violation of the act. was rendered in the case of R Y Prabhoo vs P K Kunte, which involved charges of corrupt practices against Prabhoo, the mayor of Bombay, and his agent Bal Thackeray The Bombay High Court had found Prabhoo and Thackeray guilty of corrupt practices on the ground that they had appealed for votes on the ground of religion and promoted feelings of enmity and hatred between different classes of citizens of India On appeal, Prabhoo challenged the constitutionality of section 123 of the Representation of the People Act on the ground that it violated the fundamental right to freedom of speech in Article 19(1) of the Constitution It was further argued that the high court had erred in finding that an appeal to 'hindutva' constituted a violation of the act It was argued that hindutva means Indian culture, not Hindu culture, and moreover, that the public speeches of the candidate "criticised the anti-secular stance of the Congress Party in practising discrimination against Hindus and giving undue favour to the minorities which is not an appeal for votes on the ground of Hindu religion "10 The court first turned to the question of the meaning of section 123(3), that is, the prohibition of appeals to religion to gain votes. In the court's view, the prohibition did not mean that religion could never be mentioned in election speeches. A speech 'with a secular stance' which raised questions about discrimination against a particular religion would not be caught by section 123(3). Rather, section 123(3) was intended to prohibit a candidate from seeking votes on the basis of his religion, or of trying to alienate votes from another candidate on the basis of that candidate's religion. The court then considered the question of the meaning of the prohibition on the promotion of feelings of enmity or hatred between different religious communities contained in section 123(3A). In its view, the clear objective of the section was to curb 'the tendency to promote or attempt to promote communal, linguistic or any other factional enmity or hatred to prevent the divisive tendencies'." The court accepted the arguments of the appellants that the prejudicial effect on public order is implicit in this section.12

The court subsequently considered and rejected the constitutional challenge to sections 123(3) and 123(3A),13 and then turned to consider the meaning of hindutva and Hinduism, and whether an appeal to hindutva constitutes a violation of these provisions of the Representations of People Act. The court began by reviewing what it described as the relevant Supreme Court jurisprudence on the meaning of 'Hindu', 'Hinduism' and 'hindutva'. After reviewing several cases on the meaning of 'Hindu' and 'Hinduism', the court concluded that these constitutional bench decisions "indicate that no precise meaning can be ascribed to the terms 'Hindu', 'hindutva' and 'Hinduism' and no meaning in the abstract can confine it to the narrow limits of religion alone, excluding the content of Indian culture and heritage" (emphasis added). 14 On the meaning of hindutva, the court concluded.

...that the term 'hindutva' is related more to the way of life of the people in the subcontinent. It is difficult to appreciate how in the fact of these decisions the term 'hindutva' or 'Hinduism' per se, in the abstract, can be assumed to mean and be equated with narrow fundamentalist Hindu religious bigotry, or be construed to fall with the prohibition in [section 123(3) or (3A)]<sup>15</sup> (emphasis added).

In the court's view, hindutva is ordinarily to be understood "as a way of life or state of mind and it is not to be equated with, or understood as religious Hindu fundamentalism". 16 The words Hinduism and hindutva should not be construed narrowly to refer only to the "strict Hindu religious practices unrelated to the culture and ethos of the people of India". Rather, in the abstract, these terms should simply be seen to reflect

the "way of life of the Indian people". Accordingly, the court concluded that simply referring to hindutya or Hinduism in a speech does not automatically make the speech one based on the Hindu religion and thus is not an appeal to religion. Nor, in the court's view, does such a reference necessarily "depict an attitude hostile to all persons practising any religion other than the Hindu religion". Rather, it is the particular "use made of these words and the meaning sought to be conveyed in the speech which has to be seen".17 Such words may be used in a speech "to promote secularism or to emphasise the way of life of the Indian people and the Indian culture or ethos or to criticise the policy of any political party as discriminatory or intolerant". The court thus rejected the argument that the use of hindutva per se necessarily constitutes a violation of sections (23(3) or (3A) of the Representation of Peoples Act, 1951. Instead, the court was of the view that the question of whether a particular reference to hindutva or Hinduism constitutes a violation of these sections must be a question of fact in each case.

On the facts of the case against Prabhoo and his agent, Thackeray, the court found that all three of Thackeray's speeches at issue constituted a clear appeal to the Hindu voters to vote for Prabhoo because he was a Hindu, and thus was in violation of section 123(3). Further, the court was of the view that one of Thackeray's speeches included derogatory references to Muslims that clearly amounted to an attempt to promote feelings of enmity and hatred between Hindus and Muslims, and thus were in violation of section 123(3A). Thus, both Prabhoo and Thackeray were found guilty of corrupt practices. By way of contrast, in the case against Manohar Joshi, for a speech in which he stated that "the first Hindu state will be established in Maharashtra', the court held that Joshi was not guilty of violating section 123(3) or (3A). Such a statement was not, in the court's view, an appeal to votes on the basis of religion, but simply 'the expression, at best, of such a hope".18

The outcomes of other cases were similarly divided, though the preponderance dismissed the convictions of the Bombay High Court. The conviction against R G Kapse (an elected BJP candidate to the Lok Sabha), joined with notices against Pramod Mahajan and Sadhvi Ritambara, were overturned by the Supreme Court. The speeches made by Mahajan and Ritambara were not, in the court's view, made with Kapse's consent. The fact that Ritambara was present at and participated in a public meeting at which Kapse was allegedly present could not be taken as consent to the content of those speeches.19 Moreover, Kapse denied that he was even present at the meeting, and in the court's view there was no reliable evidence to prove his alleged conduct. The charges in relation to Mahajan's speech were similarly dismissed on evidentiary grounds, that is, there was not sufficient evidence to prove that he had used the words hindutva or Hindu religion in his speeches, nor that he had raised the Ram Janmabhoomi issue, or otherwise appealed to religion. The court further held that the fact that these issues were raised in the BJP manifesto was not sufficient to find an individual candidate guilty of corrupt practices. The charges against Shiv Sena candidate Ramkant Mayeker were also dismissed. The mere fact that Bal Thackeray, the leader of the Shiv Sena, was found guilty of corrupt practices was not in itself sufficient evidence to establish that other members of the party were guilty of corrupt practices. Rather, a candidate's consent to the corrupt practices of the leader must be proven. In the court's view, there was insufficient evidence to prove that the candidate had even been present at the speeches in question.20

By way of contrast was the case Suryankant Venkatrao Mahadik vs Saroj Sandesh Naik, in which the Supreme Court held that the particular use of the term hindutva did constitute a violation of s 123(3) Mahadik's speech "was an appeal by a Hindu to a congregation of Hindu devotees in a Hindu temple during a Hindu religious festival with emphasis on the Hindu religion for giving votes to a Hindu candidate espousing the cause of the Hindu religion". In the court's view, the use of the word 'hindutva' in that speech 'at that time, place and occasion has to be understood only as an appeal on the ground of Hindu religion'. Following its holding in Prabhoo's case, the court held that although in its general or abstract meaning of the word 'hindutva' refers only to Indian culture and heritage, in this particular context it could only be interpreted as an appeal to religion.

A writ petition was subsequently brought, requesting that the court reconsider its conclusions in the hindutva case. The petition was rejected by the court. 22 Put in an attempt to clarify its decision, the court made several further observations. First, the court noted that there was nothing in the Manohar Joshi case that was inconsistent with the earlier decision of the Supreme Court in Bommai. In its view, Bommai did not relate to the interpretation of sections 3 and 3(A) of the Representation of People Act, 1951, "and therefore nothing in the decision in Bommai is of assistance for construing the meaning and scope" of those sections of the act. Any reference to the Bommai decision was thus, in the court's words, "inapposite in this context". The court further commented that the challenge in the writ petition to the correctness of the Manohar Joshi decision was "based on a misreading of that decision".

Rather, the decision was simply based on earlier constitution bench decisions of the Supreme Court, which the court was bound to follow. In its view, "a careful and dispassionate reading of the decision would show that the apprehensions and misgivings expressed in the writ petition are imaginary and baseless". There was nothing in the judgment to give rise to the fear that it has in any way condoned the appeal to religion to gain votes in an election. Although the court's emphasis that it did not sanction an appeal to religion in electoral politics was a welcome one, the court has failed to address the fundamental contradictions in the Manohar Joshi decision, and in fact may only intensify these contradictions. In our view, the court erred in the original decisions on two significant points - the interpretation of the meaning of hindutva, and the secutar nature of the speeches of the Hindu right. In the sections that follow, we take a closer look at these particular dimensions of the hindutva decision and reveal the dangerous implications of the errors made by the court.

Although the court's emphasis that it did not sanction an appeal to religion in electoral politics was a welcome one, the court has failed to address the fundamental contradictions in the decisions, and in fact may only intensify these contradictions. In our view, the court erred on two significant points – the interpretation of the meaning of hindutva, and the secular nature of the speeches of the Hindu right. In the sections that follow, we take a closer look at these particular dimensions of the hindutva decision, and reveal the dangerous implications of the errors made by the court.

### II Vindicating Hindutva

The apex Court has fully and unambiguously endorsed the concept of hindutva which the [BJP] has been propounding since its inception.

Organiser, Editorial, December 24, 1995

The Supreme Court decision was immediately claimed by the Hindu right as a vindication of their vision of hindutva.23 The front page of the December 24th edition of the Organiser proudly declared 'Triumph of Truth', and several articles in the edition waxed eloquently on the decisive victory that the judgment represented for the forces of hindutva and Hindu rashtra.24 One article trumpeted: "The Supreme Court has put its seal of judicial imprimatur on the Sangh ideology of hindutva by stating that it is a way of life or state of mind and that it is not to be equated with or understood as religious fundamentalism." H V Seshadri, leader of the RSS, welcomed the judgment as "a vindication of the Sangh's philosophy of Hindu rashtra". 25 Conversely, the Supreme Court's comments on hindutys came under immediate fire from those committed to democratic secularism. In this section, we take a closer look at the Supreme Court reasoning on the meaning of hindutva. In our view, there is good reason to be concerned about the conclusions reached by the court. First, the conclusions are unsupported on the face of the decision itself - that is, the court did not provide any evidentiary basis (factual nor expert) nor any precedential authority for its conclusion. Second, we argue that the court could not do so precisely because the conclusion is inconsistent with the historic and contemporary political meaning of the term hindutva.

### 'A WAY OF LIFF' WITHOUT PRECEDENT

In reaching its conclusions on the meaning of hindutva, the Supreme Court quoted extensively from two earlier decisions of the constitutional bench of the Supreme Court. The first, Sastri Yagnaparushadji and Others vs Muldas Bhudardas Vaishya and Another, involved a lengthy discussion on who and what are Hindus, which passed considerable comment on the meaning of Hinduism:

Unlike other religions in the world, the Hindu religion does not claim any one prophet; it does not worship any one god; it does not subscribe to any one dogma; it does not believe in any one philosophic concept; it does not follow any one set of religious rites or performances;; in fact, it does not appear to satisfy the narrow traditional features of any religion or creed. It may broadly be described as a way of life and nothing me re... When we consider this broad sweep of the Hindu philosophic concepts, it would be realised that under Hindu philosophy there is no scope for excommunicating any notion or principle as heretical and rejecting it as such... Hinduism takes it for granted that there is more than one valid approach to truth and to salvation and these different approaches are not only compatible with each other, but are complementary<sup>27</sup> (emphasis added).

The second case, Commr Of Wealth Tax, Madras, and Ors vs Late R Sridharan by LRs,<sup>78</sup> also involved a considerable discussion of the meaning of Hinduism:<sup>29</sup>

It is a matter of common knowledge that Hinduism embraces within itself so many diverse forms of beliefs, faiths, practices and worship that it is difficult to define the term Hindu with precision. 30

But the passages cited from the Sridharan case further elaborated on the nature of Hinduism, which it defined as "incorporat(ing) all forms of belief and worship without necessitating the selection or elimination of any. The Hindu is inclined to revere the divine in every manifestation, whatever it may be, is doctrinally tolerant, leaving others – including both Hindus and non-Hindus – whatever creed and worship practices suit them best."<sup>31</sup>

Based on these two decisions, the court in Manohar Joshi concluded that no precise meaning could be given to the words Hindu, Hinduism or hindutva:

...no meaning in the abstract can confine it to the narrow limits of religion alone, excluding the content of Indian culture and heritage. It is also indicated that the term 'hindutva' is related more to the way of life of the people in the sub-continent. It is difficult to appreciate how in the face of these decisions the term 'hindutva' or 'Hinduism' per se, in the abstract, can be assumed to mean and be equated with narrow fundamentalist Hindu religious bigotry, or ...fall within the prohibition of ...section 123 of the Representation of the People Act. 12

There are a number of troubling dimensions to this conclusion. First, in the court's view, even the term 'Hinduism' cannot be given any precise meaning, and is not limited to 'the narrow confines of religion'. Rather, even the word 'Hinduism' is seen to reflect 'the way of life of the Indian people'. Although the court's conclusion that 'Hinduism' ought not be reduced to "or equated with narrow fundamentalist Hindu religious bigotry" is uncontentious, its conclusion that Hinduism ought not be confined to religion at all is highly contentious, and in our view, erroneous. The very definitions cited by the court in Sridharan all point to the common understanding of Hinduism as a religion, albeit one that embraces a multiplicity of gods, texts and religious rites.

Yet, even more troubling are the court's conclusions on the meaning of hindutva. What the court does not mention, nor does it seem to be remotely troubled by, is the fact that neither of these two decisions of the constitutional bench so much as mentioned the word 'hindutva'. The court nevertheless goes on to elaborate on the meaning of hindutva as 'the way of life or state of mind of the people of the subcontinent; a meaning that it derives from the two decisions dealing with the meaning of Hinduism. In further support of its conclusions that hindutva represents a 'way of life', and not simply 'religious Hindu fundamentalism', the court then quoted a passage from the work of Maulana Wahiduddin Khan (1994):

The strategy worked out to solve the minorities problem was, although differently worded, that of hindutva or Indianisation. This strategy, briefly stated, aims at developing a uniform culture by obliterating the differences between all of the cultures coexisting in the country. This was felt to be the way to communal harmony and national unity. It was thought that this would put an end once and for all to the minorities problem.<sup>33</sup>

This passage is cited by the court to support the conclusion that "the word 'hindutva' is used and understood as a synonym of

'Indianisation', i e, the development of uniform culture by obliterating the differences between all the cultures co-existing in the country."4 What the court does not mention, nor does it seem to be in any way troubled by, is the fact that the passage quoted is a description of a particular strategy worked out by a particular political party the Bharatiya Jana Sangh, the ideological precursor of the BJP. Although their discourse did equate hindutva with Indianisation, this equation within the political rhetoric of the Hindu right should hardly be comforting. It should, to the contrary, be considerable cause for concern. The court, however, does not interrogate the strategy of Indianisation. It did not consider what was involved in the creation of a uniform culture (i e, a Hindu culture), nor the obliteration of differences (i e, of Muslim religion/identity). Rather, it simply deploys the passage as an authority for the proposition that hindutva is synonymous with Indianisation. And by taking the passage out of context, the court uses it as further support for its view that hindutva is simply a way of life of the Indian people.

The court subsequently quoted at length from Kultar Singh vs Mukhtiar Singh, another decision of the constitutional bench of the Supreme Court, which held that a poster which contained the word 'Panth' did not constitute an appeal to votes on the basis of religion, since the word 'panth' did not mean the Sikh religion.<sup>15</sup> The court once again relterated its basic conclusion:

Thus, it cannot be doubted, particularly in view of the Constitution Bench decisions of this court that the words 'Hinduism' or 'hindutva' are not necessarily to be understood and construed narrowly, confined only to the strict Hindu religious practices unrelated to the culture and ethos of the people of India, depicting the way of life of the Indian people. Unless the context of a speech indicates a contrary meaning or use, in the abstract these terms are indicative more of a way of life of the Indian people and are not confined merely to describe persons practicing the Hindu religion as a faith.<sup>36</sup>

The court further emphasised that there was nothing inherent in the terms Hinduism or hindutva that depicts any hostility, enmity or intolerance towards any other religious community. Although the terms may have been misused by some to promote communalism, such misuse does not change 'the true meaning of these terms'." Returning to the issue at hand, the court then concluded that mere references to the words Hinduism or hindutva in a speech does not constitute a violation of either s 123(3) of s 123(3A) of the Representation of the People Act. Rather, it is "the kind of use made of these words and the meaning sought to be conveyed in each particular speech which must be considered". "The issue, then, of the violation of the act becomes a question of fact in each

What is most extraordinary about the court's reasoning, from a strictly legal point of view, is that it can draw such an unequivocal conclusion as to the meaning of hindutva without having cited virtually any authorities - judicial or otherwise - in support. None of the Constitutional Bench decisions from which it purported to draw support addressed the meaning of the term hindutva, but simply the meaning of Hindu or Hinduism. The Supreme Court takes no notice of the possibility that these terms may not in fact converge, but proceeds from the assumption that their meaning can be conflated, and thus infers the meaning of one (hindutva) from the other (Hinduism). Since Hinduism is taken to mean the way of life of the people of the subcontinent, then so too does hindutva.

The Supreme Court's conclusion on the meaning of hindutva further exemplifies the way in which the unstated norms of the majority come to be inscribed in legal principles. Hinduism, the religion of the majority of Indians, comes to reflect the way of life of all Indians. Hindutva, similarly abstracted from the religion of the majority, also becomes the way of life of all the people of the subcontinent. The court unproblematically assumes that the norms of the majority can simply be extended to apply to all Indians; regardless of their religious or cultural identity. Similarly, 'Indianisation' is taken by the court to represent the political and cultural aspirations of all Indians, in and through the construction of a uniform culture. The court does not stop to consider that this uniform culture is one based on assimilating religious and cultural minorities and on reconstituting all Indian citizens in the image of the unstated dominant norm, that is, a Hindu norm. The court simply assumes, rather than in any way critically interrogates, that majoritarian norms are the appropriate measure against which the practices and rhetoric of the Hindu right can be judged. Although there is nothing particularly extraordinary about the court's implicit reliance on unstated dominant norms - judicial reasoning more often than not does incorporate these assumptions - the implications of these norms for religious and cultural minorities who deviate from these norms can be very damaging. And, as we will attempt to reveal in the sections that follow, the implications of these unstated norms of the Hindu majority in the Supreme Court's conclusions on hindutva are particularly devastating for these minorities, who are the very targets of the Hindu right.

### HINDUTVA AND HINDU RIGHT

In concluding that the term hindutva was not in and of itself an appeal to religion, nor

an expression of enmity or hatred towards other religious groups, but simply the way of life of Indian people, the Supreme Court has obscured the historical background as well as the contemporary political context within which the term has acquired meaning. As several commentators have pointed out, the court has failed to recognise that the term hindutva has historically had a very particular meaning, associated with the political philosophy of Savarkar and Golwalkar and the political agenda of the Hindu right.39 The contemporary meaning of hindutva has its roots in the writings of Savarkar, particularly in his pamphlet hindutva; Who is a Hindu? written in 1923.4" In first articulating the concepts of hindutva and Hinduness as political concepts, Savarkar emphasised that 'hindutva is different from Hinduism':

Hindutva is not identical with what is vaguely indicated by the term Hinduism. By an 'ism' is generally meant a theory or a code more or less based on spiritual or religious dogma or system Butwhen we attempt to investigate into the essential significance of hindutva we do not primarily – and certainly not mainly – concern ourselves with any particular theocratic or religious dogma or creed. Had not linguistic usage stood in our way then Hinduness would have certainly been a better word than Hinduism as a near parallel to hindutva. Hindutva embraces all the departments of thought and activity of the whole being of our Hindu role. 41

In rather striking contrast to the Supreme Court decision, Savarkar posited the concept of hindutva as something distinct from Hinduism and as a means for achieving superiority of the Hindu race, rather than the religion. According to Savarkar, 'Hindus are not merely the citizens of the Indian state because they are united not only by the bonds of love they bear to a common motherland but also by the bonds of a common blood... All Hindus claim to have in their veins the blood of the mighty race incorporated with and descended from the Vedic forefathers'.42 In this definition, a Hindu is thus cast as a race. 43 But, Savarkar did not stop at this concept of a common fatherland and a common racial bond. Rather, for him, a Hindu was also one who inherits Indian civilisation "as represented in a common history, common heroes, a common literature, a common art, a common law and a common jurisprudence, common fairs and festivals, rites and rituals, ceremonies and sacraments".44 Hindus were thus defined in terms of their common cultural heritage.

Again, Savarkar did not stop here. A Hindu was further defined as one who followed "the religion of the people peculiar and native to this land", namely, Hinduism. In Savarkar's definition a Hindu is a "person who regards the land of Bharatvarsha from Indus to the Seas as his Fatherland as well as his Holyland – that is the cradle of his

milition" A Hindu is thus one whose 'pitribhumi' and 'punyabhumi' correspond. It is through this elision of fatherland and holyland that Savarkar constructs the political category of Hindu in opposition to non-Hindus, particularly, to Muslims and Christians. Despite the fact that Muslims and Christians 'have inherited along with Hindus a common Fatherland and a greater part of the wealth of common culture language, law, custom, folklore and history, [they] are not and cannot be recognised as Hindus... Their Holyland is far off in Arabia or Persia'.46 The construction of a 'Hindu race' was thus achieved by continuously positing a conflict between the 'Hindu' and others', most notably, the 'Muslim invader'.47

Although Savarkar was emphatic that hindutva was distinct from Hinduism, it was also clear in his writings that Hinduism was an important part of being Hindu. As Purshottam Agarwal has argued, Savarkar effectively transforms the role of religion in constituting the category of Hindu: "In religious discourse the community is defined in terms of a shared creed or dogma. In the political discourse of communalism, the community is defined primarily as a race. Religion, instead of being a defining criterion, is transformed into a fetish owned by an already defined community".48 Hindus, according to Savarkar, were a race who by definition followed a particular religion. And by definition, Hindus were constituted in opposition to Muslims and Christians whose very identities were constituted as always posing a threat of disloyalty. Although Muslims and Christians were also constituted in racial terms, it was clear that the threat that they posed lay in the fact that their holyland was other than in India. Again, despite the emphasis on racial differences, it was the difference of religion that remained as a constituting movement of the oppositional identities.

The definition of a Hindu and of hindutva was further articulated in the writings of Golwalkar. Golwalkar's vision of a Hindu nation included five components:

The idea contained in the word Nation is a compound of five distinct factors fused into one indissoluble whole, the famous five unities: Geographical (Country), Racial (Race), Religious (Religion), Cultural (Culture) and Linguistic (Language).

Golwalkar elaborated in considerable detail the meaning he ascribed to each of these categories. Country is described as "hereditary territory... relating to which [a people] has certain indissoluble bonds of community". A race is defined as "a hereditary society having common customs, common language, common memories of glory or disaster; in short, it is a population with a common origin under one culture." Religion

and culture are defined together, because in Golwalkar's view, the two are often indistinguishable:

Where religion forms the very life-breath of a people, where it governs every action of the individual as well as of the society as a whole, where in short, it forms the only incentive to all action, wholly and spiritually, it is difficult to distinguish these two factors <sup>52</sup>

In elaborating on his definition of religion, Golwalkar argued that those who argue that religion has no place in politics fail to understand the real meaning of religion:

Religion, in its essence is that which by regulating society in all its functions, makes room for all individual idiosyncrasies, and provides suitable ways and means for all sorts of mental frames to adopt, and evolve and which at the same time raises the whole society as such, from the material through the moral to the spiritual plane.<sup>53</sup>

In his view, this religion "cannot be ignored in individual or in public life". 4 Finally, language is defined as an essential characteristic belonging to every nation: "Every race, living in its own country, evolves a language of its own, reflecting its culture, its religion, its history and tradition". 55

Golwalkar argued that the Hindus qualify under each of these categories, and thus, constitute a nation. "Hindustan, the land of the Hindus ...a definite geographical unity" constitutes a country. "[T]he Hindu Race is united together by common traditions, ...memories, ...culture, ...language, ...[and] customs", and thus constitutes a race. <sup>36</sup> On religion and culture:

This great Hindu Race professes its illustrious Hindu Religion, the only religion in the world worthy of being so denominated, which in its variety is still an organic whole... Guided by this Religion in all walks of life, individual, social, political, the Race evolved a culture which despite the degenerating contact with the debased 'civilisations' of the Mussalmans and the Europeans, for the last ten centuries, is still the noblest in the world.<sup>37</sup>

In Golwalkar's view "No race is more fortunate in being given a Religion, which could produce such a culture". \*\* On the question of language, he recognised a problem, insofar as it appears that each region has its own language. But, he argued "there is but one language, Sanskrit, of which these many languages are mere offshoots". \*\* Thus, Golwalkar concluded, "this country, Hindustan, the Hindu Race with its Hindu Religion, Hindu Culture, and Hindu Language, complete the Nation concept". \*\* On the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of the country of t

In this definition, although religion is but one of the five qualifying categories of the Hindu nation, it can be seen to underlie the other four categories. Race is defined not so much in terms of a common blood line (as in Savarkar's definition), as it is in terms of a common culture. It is less a biological category than a cultural category. And culture

is in turn defined almost wholly in terms of a common religion, since in Golwalkar's view, religion and culture for the Hindus is virtually indistinguishable. Thus, both race and culture are constituted in and through the category of religion. Despite the efforts to insist that the category of Hindu is broader than that of Hinduism, we can begin to see that the religion of Hinduism remains the constituting moment of this broader political category. The other two categories - of country and language - can in turn be seen to be derivative of this religious category. Country is simply the geographical territory where a people united by religion/culture/ race live, and language, similarly, that which a people united by religion/culture/race. speak. And the priority of religion within this construct of religion/culture/race reveals that, despite Golwalkar's efforts to insist on the distinct nature of the five categories, it is in fact the common religion of Hinduism from which the entire definition of the Hindu nation is derived.

The primacy of religion is further evident in Golwalkar's discussion of the 'problem' of those who live in Hindustan, but who are not part of the Hindu race, religion and culture, namely, the Muslims and Christians. In his view, those who were not a part of the Hindu Race, still had a chance to be a part of the Hindu nation if certain conditions were met:

All those ... can have no place in the national life, unless they abandon their differences, adopt the religion, culture and language of the Nation and completely merge themselves in the National Race. So long, however, as they maintain their racial, religious and cultural differences, they cannot but be only foreigners..., the strangers have to acknowledge the National Religion as the State Religion and in every other respect inseparably merge in the National Community. 61

Although the Muslims and Christians are cast as 'foreign races', the constituting moment of this racial category remains one of religion. As in Savarkar's writings, the problem with these minorities is not that they do not share a common land, a common language, or even part of a common culture. The real problem lies with the absence of the requisite 'mental allegiance', a mental allegiance that Muslims and Christians have not demonstrated. It is the fact that Muslims and the Christians do not look upon India as their holy land, and thus continue to display a religious allegiance to a foreign land that is of concern to Golwalkar. The call on these communities to "give up their present foreign mental complexion and merge in the common stream of our national life",62 is thus a call to give up their religion, which lies other than in the Hindu nation. Despite the fact that Golwalkar speaks of racial and cultural differences, these differences only

### MAHARASHTRA STATE LOTTERY

# SHREE BUMPER DRAW

### **ONE COMMON PRIZE OF RS. 15 LAKH (GUARANTEED)**

Four series - Total 2 lakh 66 thousand 714 prizes
TOTAL AMOUNT OF PRIZES Rs. 1 CRORE 21 LAKH 25 THOUSANDS.

### **FEATURES:**

- 20 prizes of Rs. 1 lakh each
- 8 prizes of Rs. 50,000 each
- **o** 16 prizes of Rs. 25,000 each
- 24 prizes of Rs. 5,000 each
- 240 prizes of Rs. 1,000 each
- 2,400 prizes of Rs. 100 each
- 24,000 prizes of Rs. 50 each
- Total 2 lakh 40 thousand prizes of Rs. 25 each on last digit.

### **CONSOLATION PRIZES**

Total 5 prizes of Rs. 5,000/- each for the ticket numbers immediately preceding and succeeding the common prize winning number and also for the said number in non-winning series.

TOTAL AMOUNT OF PRIZES Rs. 90 LAKH 65 THOUSANDS.

Draw: On September 30, 1996 at 4.30 p.m. at ALIBAUG, RAIGAD

Ticket price Rs. 10/- only.

make sense in relation to the universitying category of religion. The call for assimilation is thus first and foremost a call for religious assimilation, for minorities to return to the folds of Hinduism. It is only secondly a call to assimilate into the culture and race, insofar as this culture and race is one that is derivative of the religious category.

Moreover, it is in these discussions of the minorities that we can again see the extent to which the political category of Hindu has been constituted in opposition to religious minorities, and premised on the very elimination of these minorities, through assimilation or considerably more violent means. Religious minorities are constituted in this discourse as presenting a threat to the integrity of the nation, and could not be recognised or accommodated as a legitimate part of the Hindu nation. Golwalkar was very clear that there was no place for religious minorities who failed to assimilate they must "lose their separate existence to merge in the Hindu race, or may stay in the country, wholly subordinated to the Hindu nation, claiming nothing, deserving no privileges, far less any preferential treatment - not even citizen's rights'n1 (emphasis added). The Hindu nation was thus constituted in the writings of Golwalkar through an attack on the very legitimacy of religious minorities, and on a denial of any protection of minority rights within the Hindu nation.

These conceptualisations of the Hindu nation continue to inform the political agenda of the Hindu right today. Hindutva means establishing a Hindu rashtra – a Hindu state, based on a Hindu way of life. As Savarkar did before them, the contemporary ideologues of the Hindu right continue to emphasise a distinction between Hindu and Hinduism. And like Golwalkar before them, they continue to insist that Hindu is an attitude of allegiance. For example, Seshadri writes:

Hindu is not the name of a religious faith like the 'Muslim' or the 'Christian' It denotes a national way of life here. All those who feel firmly committed to the unity and sanctity of our country and our people and look upon our great forebearers as their national heroes and the sublime values of our cultural life as their points of veneration and emulation are al! Hindus.64

Yet, despite this continued emphasis that Hindu means more than the 'ism' of Hinduism, it remains all too evident that the constituting moment of Hinduness is still religion. Hinduism continues to be the religion followed by the Hindus. And it continues to be asserted as the only religion worthy of the name. It is time and again asserted as the only religion premised on the notion of toleration, which is in turn used to justify the claim that only Hindus are truly secular. The supremacy of Hinduism remains the basis of the political claims

against the minorities, who follow religions that allow neither toleration nor secularism. While the political category of Hindu continues to be given precedence, Hinduism nevertheless remains as a crucial dimension of this category.

Indeed, if anything, the salience of religion in the discourse of the Hindu right has only increased since the advent of the VHP. The emphasis on Hindu as a racial rather than a religious category, and the distinction between Hindu and Hinduism, has begun to blur. The VHP is an organisation explicitly committed to promoting Hinduism. Moreover, it claims to represent the totality of Hinduism; in effect, it attempts to reconstitute Hinduism as an organised religion under its central auspices. As Basu et al have argued, this appeal to religion in and through the VHP has been part of the phase of popularising hindutva; that is, of moving beyond the elite cells of the RSS shakhas and popularising the message of hindutva among the Hindu masses. "It is within this context of popularising hindutva that the Ram Janmabhoomi campaign acquired such importance and dynamism within the Hinduright. It is, moreover, within the context of this campaign that the religious nature of the political rhetoric of the Hindu right has become most evident. The ascendance of the Ram legend, as well as the political mobilisation of large numbers of sants and sadhus into the popular front of the Hinduright, has given it a distinctively religious flavour Although traces of the racial construction of Hindus remains in evidence, particularly in the ongoing attacks on the Muslim community, the VHP is unapolegetic in its emphasis on religion.

In its contemporary deployment, the subtle distinction between Hindu, hindutva and Hinduism of earlier times is often lost. The political discourse is imbued with religious discourse sometimes espousing the superiority of Hinduism, or other times, simply punctuating political appeals with the language, symbols and ceremonies of Hinduism. But, the relationship between Hindu as a political category and Hinduism as a religious category remains complex. For example, the explicitly religious claims of the VIIP to represent an already existing collectivity of Hindus only makes sense in relation to the underlying conceptualisation of Hindu as a racial category.67 Moreover, while the appeal to religion has grown, the concept of Hindu rashtra and hindutva does continue to mean more than an appeal to the religion of Hinduism. For the Hindu right, an equally important dimension of hindutva is the attack on the legitimacy of minority rights. Hindutva continues to mean the assimilation of all minorities into the culture, the way of life, ultimately the religion, of the majority. The concept of hindutva thus

retains its oppositional meaning, that is, to be constituted largely in relation to that which they oppose - Muslims and Christians. The attack on the legitimacy of minority religious communities continues to go to the very core of the concept of Hindu rashtra and hindutva. From Savarkar to Golwalkar to the contemporary ideologues, it is this attack on religious minorities, on the effort to assimilate these minorities back into the folds of Hinduism that has given hindutva its political character. The current phase of popularising the agenda of the Hindu right through the VHP retains this essentially political attack on religious minorities. The appeal to religion has not fundamentally altered this character, but simply popularised it through the invocation of religious discourse.

In the contemporary political terrain, hindutva thus continues to be a political category that is distinct from the religion of Hinduism, but which relies on religion in constituting the political category of Hindu. The Supreme Court has completely failed to understand the meaning of the term, and its complex relationship to the religion of Hinduism.<sup>™</sup> For the court to infer the meaning of hindutva simply from reviewing its jurisprudence on the meaning of Hinduism and Hindu is simply inaccurate. At the same time, for the court to conclude that an appeal to hindutva is not per se an appeal to religion is to also misrepresent the complex relationship between these terms in the contemporary strategies of the Hindu right. Although the concept of hindutva has developed as distinct from Hinduism, it is a concept that nevertheless presupposes the religion of its constituency. And in recent years, the political usage of the term has become more and more imbued with explicitly religious discourse. When used in the context of electoral politics, hindutva is an appeal to religion, and as such, ought to constitute a violation of section 123(3) of the Representation of the People Act.

Secondly, hindutva continues to be a political category that at its core is an attack on the legitimacy of minority rights. For the court to conclude that there is nothing inherent in the concept of hindutva that involves the promotion of religious enmity, hatred or disharmony is again, simply inaccurate. The Supreme Court has failed to understand the assault on religious minorities that is a constituent element of the concept of hindutva. From its roots in the writings of Savarkar to its contemporary deployment by the likes of Bal Thackeray, Manohar Joshi, Sadhvi Rithambara and L K Advani, hindutva has been based on the idea of Indian society fractured by the conflict between religious communities, particularly between the Hindus and Muslims, wherein the majority of Hindus have been and continue to be oppressed at the hands of the Muslim minority, hindutva is a call to unite against these religious minorities; at best it is a call to assimilate these minorities into the ostensibly more tolerant fabric of Hinduism; and at its more extreme, it is a call to simply destroy them. In both its more modest assimilationist mode and in its more extreme and violent mode, hindutva is an attack on the rights, indeed on the very legitimacy of religious minorities. As a call to assimilate or otherwise undermine the very identity and integrity of minority communities, it is based on a total disregard and lack of respect for other religious groups. And as such, its political deployment can only be seen as promoting enmity, disharmony, and often hatred between religious groups. The Supreme Court has simply failed to understand the political agenda that informs the meaning of hindutva in the contemporary political landscape, where an appeal to hindutva is both an appeal to religion, and an appeal promoting enmity and hatred between religious groups. When used in the context of electoral politics, hindutva ought to constitute a violation of both section 123(3) and section 123(3A) of the Representation of People Act, 1951.

For the Hindu right, hindutva is indeed a way of life - a way of life of the Hindus who by definition, practice Hinduism. It is not about the way of life of the Muslims or the Christians in India. For the Hindu right, hindutva is about the assimilation and ultimate negation of these religious minorities. This is the meaning of hindutva both in its historic and contemporary context. It is in this light that the Supreme Court conclusions that hinduty a simply represents a way of life of the people of the subcontinent must be evaluated, and ultimately rejected. Hindutva is not the way of life of all the people of the subcontinent. At best, it aspires to represent the Hindu people, and to assimilate non-Hindus into its fold by whatever means possible. The Supreme Court has not only effectively condoned this political vision, it has elevated it to a description of an existing state of affairs." It can hardly come as a surprise that the Hindu right has claimed the decision as an unequivocal victory.70

The efforts of the Supreme Court to clarify its views has allayed the fears of many of those committed to secular democracy. Hus we remain unpersuaded. In its rejection of the review petition, the court has failed to appreciate precisely where the problems lie. It did not address the highly problematic and unsustainable conclusions about the meaning of hindutva as a way of life in the subcontinent. The conclusion remains without jurisprudential precedent, and without any appreciation of the historical, political and social context of the term

hindutva. The court has failed to see how its conclusions on the meaning of the term hindutva will allow those forces committed to establishing a Hindu rashtra to continue to pursue their agenda, fearless of the implications of appealing to the concept of hindutva. In our view, the conclusions of the court have left the legal framework of democratic politics considerably weakened against the political use of religion by the Hindu right. Despite the prohibition on such an appeal in the Representation of Peoples Act, and the Supreme Court's emphasis that it has not sanctioned such appeals, the Manohar Joshi case has, perhaps unwittingly, given the Hindu right a green light to continue to both its hindutva campaigns and its efforts to establish a Hindu rashtra. Although strictly speaking, an appeal to hindutva has not been completely immunised from prosecution under the act in so far as the court has emphasised that it is the specific context in which it is used that must be examined, the court's conclusions on the meaning of hindutva have nevertheless legitimised the term. The Hindu right is free to continue its appeal to hindutva and to the establishment of a Hindu state if it is careful to not too directly appeal to the religion of the candidate.72 And the Hindu right has wasted no time in doing just so. Its main electoral platform in the 1996 national elections is once again hindutva.71

The prohibition on the promotion of religious enmity and hatred is also left weakened in the aftermath of the decision. Although the court did condemn Thackeray for promoting hatred towards the Muslim community, the court did not recognise the extent to which the concept of hindutva itself implies an attack on minority rights While the court's findings against Thackeray signals that his rhetoric remains beyond the realm of legitimate political speech, it is difficult to imagine speeches more loaded with hatred towards a minority religious group than those of Thackeray.74 If the prohibition on the promotion of enmity and religious hatred to garner votes is to mean anything at all, it would have to capture such speech.74 At the same time, the more technical aspects of the Supreme Court decisions have created ample opportunity for the Hindu right to continue its often vehement attacks on minorities. The narrow test established by the court for proving that a candidate consented to the speeches of another will allow the Hindu right to carefully orchestrate its campaigns, ensuring that speakers other than electoral candidates are assigned the task of spewing the most hateful rhetoric.76 Moreover, as we discuss in the next section, the court's conclusions on the secular nature of some of the speeches of the Hindu right will continue to allow considerable latitude to electoral candidates to attack the legitimacy of minority rights, provided that the attack is adequately disguised within the discourse of secularism and equality.

### III Vindicating 'Pseudo-Secularism'

...when Hinduism is no religion and is a way of life to say that a Hindu state is anti-secular is wholly incorrect... Hinduism is secularism par excellence.

Organiser, January 21, 1996, p 2.

The failure of the court to appreciate the meaning of hindutva and thus the implications of its deployment in the political landscape has done an enormous disservice to the cause of secularism. But the extent of the damage does not end here. Rather, the damage has in our view been compounded by the court's comments on the secular nature of some of the speeches of the BJP candidates. In this section, we begin by briefly reviewing these comments and then attempt to illustrate their dangerous implications by situating these comments within the broader context of the highly contested meaning of secularism, and the efforts of the Hindu right to appropriate secularism for its own rather non-secular purposes. Finally, we challenge the views of the Supreme Court that there is nothing inconsistent between its conclusions, and earlier decisions of the constitution bench of the Supreme Court on secularism, particularly, Bommai v Union of India.

### SIMPLY SECULAR?

In considering whether an appeal to hindutva constituted a violation of the Representation of the People Act, the court took into account the fact that many of the Hindu right speeches at issue appealed to the principle of secularism, and to violations of the right to equality. In the court's view:

It cannot be doubted that a speech with a secular stance alleging discrimination against any particular religion and promising removal of the imbalance cannot be treated as an appeal on the ground of religion as its thrust is for promoting secularism. Instances given in the speech of discrimination against any religion causing the imbalance is the professed goal of secularism, the allegation being against any individual or any political party, cannot be called an appeal on the ground of religion forbidden by sub-section (3). In other words, mention of religion as such in an election speech is not forbidden by sub-section (3) so long as it does not amount to an appeal to vote for a candidate on the ground of his religion or to refrain from voting for any other candidate on the ground of his

According to the court, any election speech "made in conformity with the fundamental right to freedom of religion guaranteed under Articles 25 to 30 of the Constitution cannot be treated as anti-secular to be prohibited by sub-section (3) of Section 123 unless it falls within the narrow net of the prohibitions "78 A speech that refers to religion during an election campaign with a secular stance in conformity with the fundamental right to freedom of religion' is outside the purview of section 123(3) unless it includes an appeal to vote for or against a candidate on the basis of his religion Similarly in Ramakant Mayekar the court stated "There can be no doubt that mention of any religion in the context of secularism of [sic] for criticising the anti-secular stance of any political party or candidate cannot amount to a corrupt practice "79 The subtext of these comments are quite clear the fact that the candidates were criticising the 'pseudo-secularism' of the Congress government and pointing out the discrimination against Hindus within this version of secularism, meant that the speech was of a secular nature

In our view these small passages represent some of the most insidious dimensions of the inroads made by the Hindu right. In this passage, the Supreme Court has effectively legitimised the secular nature of the Hindu right's version of secularism. The paradox of the Hindu right's version of secularism has entered officially into legal discourse Their long struggle to popularise ind legitimise a version of secularism that effectively undermines all prevailing notions of secularism has won yet another important ideological victory in having just been awarded a judicial seal of approval. In order to illustrate the dangerous implications of these passages we turn first to briefly leview the dominant discourse of secularism within constitutional law and the way in which the Hindu right has appropriated this discourse for its own rather non secular purposes

### CONTESTING SECULARISMS

Although generally considered as a cornerstone of Indian democracy secularism has long been a highly contested concept in India \*0 From the days of the independence struggle two very different understandings of secularism have competed for ideological dominance Nehru's vision - dhaima nirapeksata - was based on a strong belief in the need to separate religion and politics \*1 By way of contrast Gandhi s vision - sarva dharma sambhava' - rejected the idea of the separation of religion and politics and was based instead on the principle of equal respect of all religions. The contest between these two visions of secularism can be seen within the broader context of western concep tualisations of secularism, and debates regarding its appropriateness within the

Indian context The liberal democratic vision of secularism is generally seen as characterised by three principles (1) liberty and freedom of religion, (2) citizenship and the right to equality and non-discrimination and (3) neutrality and the separation of state and religion. The first two principles have posed little controversy in the Indian context Rather, the right to freedom of religion and the right to equality and non-discrimination are generally recognised as important constitutional values in their own right as well as a foundation of Indian secularism \*\* The problem arises however in relation to the third principle that is the separation of religion and state. It is in regard to this third principle that some commentators have argued that Ind. 1 is not a secular state, 14 that others have argued that India has some but not all of the features of a secular state \*5 ind that yet others argue that if India is to be a secular state it must develop its own distinctive understanding of the requirements of secularism. It is in relation to this third principle that the Nehruvian and Gandhian models part company. Nehru was committed to a separation of religion and politics whereas Gandhi was of the view that such a separation was neither possible nor desirable within the Indian context. Rather, a distinctively Indian conceptualisation of secularism was required a secularism which would be more in keeping with the culture and tradition of the Indian people. Saarva dharma samibhiya was in Ciandhi s view such a vision. It is this understanding of secularism as the equal respect of all religions that has come to dominate legal and political thought \*c

Within the cortext of constitutional law and discourse discussions of secularism typically focus on the right to freedom of religion and the right to equality the first two of the general principles of liberal democratic vision of secularism. The literature typically highlights the various provisions of the constitution that are considered relevant to the principle of the equal respect of all religions. Articles 14 and 15 guarant ing the right to equality and non discrimination and Article 25 26 guaranteeing the right to freedom of religion and the right of iclinious denominations to organise their own affairs. The right to equality and the right to freedom of religion are within this vision scen as fundamentally interconnected - that is that all citizens must have the equal right to freedom of religion and that the state must not discriminate on the basis of teligion. Following from the dominant understanding of secularism as saarva dharma samabhava, the constitutional discourse does not insist on a wall of separation between religion and politics 17 Rather discussions tend to emphasise the principle of toleration - that is, of the equal toleration of all religions as In this regard, Article 51A prohibiting the establishment of a state religion is generally highlighted, as are the constitutional prohibitions on religious instruction in state schools, and on taxation in support of any particular religion. The constitutional guarantees on equality and freedom of religion which are seen to frame this principle of equal toleration are also again highlighted. The constitutional characterisation of secularism can then be seen to be characterised by three principles (1) freedom of religion (2) equality and non discrimination and (3) toleration Toleration thus comes to displace neutrality as the third principle of secularism 19 It is this subtle but important shift from neutrality to toleration that captures the essence of the saarva dharma samabhava vision of secularism and its conceptualisation of the appropriate relationship between religion and state. In stark contrast to the liberal democratic model, which insists that the relationship must be characterised by nonintervention the equal respect of all religions ' model allows for state intervention in religion, provided that such intervention is in accordance with the requirements of equality and freedom of religion 90

Within this constitutional framework, there is a general sense that state intervention in religion is not prohibited. There is also a general senst that equality is intricately connected to secularism, the equal respect of all religions requires that all individuals and religious communities have the equal right to freedom of religion (to practice, profess and propagate their religion), and that the state does not discriminate among citizens on the basis of their religion. But, the more specific question of the kind of state action mandated by this vision of secularism remains unanswered. What kind of state action is required to ensure that all individuals and communities have an equal right to freedom of religion? What kind of state action is required to ensure that no citizens are discriminated against on the basis of their religion? Although this vision of secularism allows some form of state intervention in so far as it does not require the wall of separation between state and religion the kind of intervention mandated by this vision of secularism remains undefined Does the equal respect of all religions require that the government treat all religions the same? Or does the equal respect of all religions require that the government equally accommodate the different rengions. There is nothing on the tace of the concept itself that resolves this

As we have argued elsewhere, the debate over the precise meaning of secularism is very much a debate over the meaning of equality and as such much of the confusion

over the meaning of secularism derives from the confusion over the meaning of equality 91 Any attempt to resolve the meaning of secularism requires a shift in attention to the meaning of equality - a concept that is no less contested within the contemporary Indian polity As we have argued elsewhere, the dominant understanding of equality in India, particularly within the context of constitutional law has been one of formal equality - that is, on formally equal treatment 12 But a second approach to equality is also discernible in Indian political and legal thought, that is, one of substantive or compensatory equality. In this understanding, equality is concerned not with equal treatment but with addressing disadvantage Substantive equality, as we have elaborated in our work is directed at eliminating the historic and systemic discrimination against disadvantaged groups that operates to undermine their full and equal participation in social, economic, political and cultural life 41 In the Indian context, this approach to equality is often referred to as compensatory discrimination, which is intended to capture the idea that certain individuals or groups may need to be treated differently in order to compensate for the discrimination they have suffered These very different understandings of equality have very different implications for secularism. A tormal understanding of equality would insist that the government treat all religions the same. A substantive understanding of equality on the other hand, would require that the government accommodate religious differences particularly those of minority religious groups which have suffered from historic and systemic disadvantage

There has, however, been surprisingly little attention to this question of the meaning of equality within the dominant vision of secularism. This continuing silence on the underlying conception of equality is no longer a harmless oversight. As we illustrate in the next section, it has become a dangerous silence that the Hindu right has been only too willing to exploit in its quest to claim the terrain of secularism as its own. The discursive strategies of the Hindu right have been based on bringing a very particular understanding of equality to the popular understanding of secularism, with powerful results.

### IN THE NAME OF SECULARISM

The Hindu right has staked its claim to secularism, casting itself as the only true upholders of Indian secularism. And increasingly, as their claim comes to have more and more popular appeal, it is a claim that those dedicated to the cause of secular democracy can no longer afford to ignore

As we have argued elsewhere, a more detailed examination of their strategy reveals how skillfully the Hindu right has deployed constitutional discourses of secularism and equality "The Hindu right has appropriated the concept of secularism and through various ingenious discursive moves, made it very much their own Secularism has now become the official banner under which the Hindu right campaigns for a Hindu rashtra, and the rights of religious minorities are savagely attacked and delegitimised. And its claim to secularism is intricately connected to its understanding of equality.

The Hinduright explicitly argues in favour of saarva dharma sambhava and 'positive secularism' The BJP has repeatedly stated its support for this version of secularism. For instance the BJP constitution provides "The Party shall be committed to Positive Secularism that is, Sarva Dharma Samabhav' A The BJP Manifesto similarly states "The BJP believes in positive secularism which, according to our constitution makers, meant Sarva Dharma Samabhava and which does not connote an irreligious state '\* This discourse is based on a particular vision of equal respect of all religions that is, on formally equal treatment Within this view the equality of all religions requires that all religious communities be treated the same in law. For example, L.K. Adv ini states The BJP is committed unequivocally to secularism as conceived by our constitution makers. All citizens are equal and there shall be no discrimination between one citizen and another ich grounds of his faith' 7 Any special or different treatment on the basis of religion is seen as a violation of secularism. The same emphasis on formally equal treatment can be seen in RSS political rhetoric. "The RSS never demands any special rights to the Hindus. At the same time, it is against giving any concession to other religious minority groups and it opposes religious discrimination "98

The particular meaning that the Hindu right gives to the equal respect of all religions is one based on formally equal treatment Accordingly, any laws or policies that provide special treatment for minorities are opposed as 'pseudo secularism', or the 'appeasement of minorities' In the discursive strategy of the Hindu right this approach to secularism is made to sound quite reasonable. It is simply based on the saarva dharma sainabhava approach to secularism, which is after all the quintessential understanding ot secularism in India, and the formal approach to equality, which has been the dominant understanding of equality within Indian constitutional law Beneath the surface, however, this discourse of secularism and equality is an unapolegetic appeal to brute majoritarianism and an assault on the very legitimacy of minority rights. The formal equality of the Hindu right means that the dominant Hindu community becomes the norm against which all other communities are to be judged and the norm according to which these 'other' communities are to be treated in the hands of the Hindu right, not only is special protection for the rights of minorities rejected as a violation of secularism, but moreover, their leaders defend this vision of secularism in unapologetically majoritarianism terms. For example, Seshadn writes

Democracy in normal parlance means the rule of the majority. In every single democratic country, it is the majority culture whose ideals and values of life are accepted as the national ethos by one and all. The same applies to the laws of the land. No religious group can claim any exclusive rights or privileges to itself. 100

One of the very cornerstones of democracy - the protection of minorities from the rule of the majority-is simply discarded. Through this approach, the Hindu right is attempting to establish majority norms as the ostensibly neutral norms against which all others are judged Their norm is a Hindu norm. In their vision, the role of the state in religion is thus not one of neutrality at all but of fostering the Hindu nation. We can see the paradox of this vision of secularism carried to its contradictory extreme. The practices of the Hindu majority come to be viewed as neutral, and the state in turn is seen to be acting neutrally only when it reinforces these practices. Thus, Hindus do not need special rights because of the extent to which all legal rights come to be based on Hindu cultural norms and practices. The discourse of secularism comes to reinforce the norms of the dominant Hindu community

The reconstruction of secularism within the political rhetoric of the Hindu right has also relied on the principle of toleration, a principle which in the hands of the Hindu right is cast in wholly religious terms Ciolwalkar, speaking on the question of secularism, stated

It sometimes seems to mean a denial of all religion – and carries a connotation of being materialistic. But if by secularism is meant that the state should not be tagged to any particular creed and that all faiths should be equally respected then this again would be another name of Hindu tradition. In fact, Hindu tradition goes far beyond the western concept of 'tolerance which implies that the faith which tolerates is superior to the other With us all faiths all equally sacred.

Hinduism is secularism in its noblest sense <sup>101</sup> Echoing the views of the ideological leaders of the Hindu right before him, Deoras of the RSS, similarly argues that only Hindus are capable of real secularism

If secularism means treating all religions on an equal footing, proselytisation and secularism can't go together Those who feel that their religion is superior to all others. Their organisations therefore cannot claim to be secular. Hinduism, on the other hand, does not believe in conversions and Hindus have never been proselytisers. As such, organisations of Hindus alone can be truly secular. 102

Secularism is defined as the toleration of all religions. Hinduism is defined as the only religion with a true tolerance for all other religions Therefore according to these terms only a country based on Hinduism can be truly secular The norm of the dominant Hindu community, which remains unstated in the Hindu right's political rhetoric around equality and non-discrimination is here stated quite explicitly. Hinduism is secularism par excellence' 10 And paradoxically, it is precisely this argument that is used to deflect any allegation of fundamentalism or theocracy Because Hinduism is tolcrant because it represents secularism par excellence' by definition it cannot be fundamentalist or theocratic

Revealingly, there is little emphasis on the second principle of Indian secularism namely, freedom of religion within the Hindu right For example, neither the BJP constitution nor manifestos explicitly refer to freedom of religion as a basic commitment There is a reference within its constitution to liberty of faith' as a basic objective but it is important not to assume that the term is synonymous with the constitutional guarantees of freedom of religion Rather. when the idea of liberty of faith' is raised it tends to be subsumed within the more general rubric of coleration and is used to distinguish Hindu rashtra from a theocratic state For instance in Integral Humanism Deendayal Upadhyaya emphasised that dharma rajyatom does not mean a theocratic state Where a particular sect and its prophet or guru rule supreme that is a theocratic state. All the rights are enjoyed by the followers of this particular sect. Others either cannot live in that country or at best enjoin a slave like secondary citizen s status' ins Upadhyaya insisted that such was not to be the case in dharma rajya

In a theociatic state one religion has all the rights and advantages and there are direct or indirect restrictions on all other religions. Dharma rayia accepts the importance of religion in the peace happiness and progress of an individual. Therefore the state has the responsibility to maintain an atmosphere in which every individual can follow the religion of his choice and live in peace. The freedom to follow one sown religion necessarily requires tolerance for other religions (emphasis added).

But, the freedom of religion within this vision is a highly restricted one First, the idea of 'liberty of faith' or 'freedom to worship' is cast in highly individualistic

terms it is the individual's right to pursue his or her own spiritual path, it is not the collective rights of a religious community to any form of self-determination Rather these collective rights, such as the right to set up educational institutions as guaranteed by article 30 of the constitution, are cast as a violation of equality 137 Secondly it is a freedom of religion that is brought under the rubric of Hinduism - that is 'linduism alone is seen to provide the toleration that is required for individuals to be able to pursue their own spiritual path. The idea of Hinduism as tolerant is again used to prop up the claim to secularism while framing this claim within an entirely religious discourse. Thirdly, it is a freedom of religion that does not include the right to propagate one's religion Rather, the propagation of religion is cast as a violation of toleration as the inability of some religions to tolerate others in More specifically Islam and Christianity the proselytising religions are seen to be premised upon the non toleration of other religions and thus on the very demal of the right to freedon of religion of those who do not subscribe to their religions. The right to propagate one's religion is thereby transformed from an integral part of freedom of religion into a violation of freedom of religion

The sphere of treedom of religion is thus radically curtaited within the discourse of the Hindu right. It is contained on one side, by a formal understanding of equality which condemns any special treatment to religious minorities as a violation of secularism. Cin the other side freedom of religion is contained by a religious understanding of toleration within which Hinduism becomes the only guarantor of an individual's ability to follow their own religion and therefore the only guarantor of secularism. Thus framed the Hinduright can retain just enough of the discourse of freedom of religion (or liberty of worship) to maintain its claim to secularism and to distinguish itself from religious fundamentalism

Through these various manipulations and redefinitions the Hindu right is thereby able to cast its arguments within the requirement. of the constitution il discourse of secularism It appeals to the constitutional guarantees of equality in Articles 14 and 15, which in its hands, means the equal treatment of all individuals and communities. It appeals to the principle of toleration, which in its hands means the supremacy of Hinduism. And it appeals to the constitutional guarantees of freedom of religion in Article 25 which in its hands means only the individual right to worship and is used to reinforce the importance of Hinduism's toleration Each dimension is carefully deployed to reinforce the other and to immunise itself from the allegation of religious fundamentalism

Despite its appearance, the Hindu right's discourse of secularism' fails to conform to any of the prevailing definitions of secularism It does not, of course, follow the formal approach to secularism in so far at there is no separation of religion and politics Nor does it in fact follow the saarva dharms sambhava approach in so far as there is no real respect or accommodation for any other religion. The Hindu right does not equally respect all religions since not all religions are as tolerant as Hinduism then not all religions are worthy of equal respect. Rather, the objective of hindutva is the assimilation of minorities into the broader and ostensibly more tolerant fabric of Hinduism But increasingly this version of secularism is capturing the hearts and minds of Hinda subjects Increasingly this version of secularism is passing as a reasonable alternative to the other failed versions

In the Manohar Joshi decision even the Supreme Court has now recognised the Hindu right's appropriation of the concept of secularism as a reasonable alternative In the court's view speeches that allege discrimination against a religious community are simply part and parcel of the constitutiona. guarantees of equality and freedom of religion. There is a certain logic to the reasoning following from the constitutiona discourse of secularism, the Hindu right is appealing to the concept of secularism, and criticising the failure of the Congresi government to implement real secularism It is easting its arguments in the language of equality - formul equality and discrimination against Hindus Appeals an expressly made to the guarantees of equality in Articles 14 and 15 of the constitution Since the BJP's arguments are thus cast ii the discourse of Indian constitutionalism these arguments are not seen to be an appea to religion. It is precisely this appeal to the language of secularism and equality that ha made the strategies of the Hindu right si clever and so disturbingly successful. And on its face there is nothing in the constitutional discourse of secularism tha seems to prevent it from doing so. The Hindi right is able to take up the equal respect o all religions and its underlying principle of equality and non-discrimination freedor of religion and toleration to argue in favou of a Hindu state. The fact that this constitutional discourse has never insiste on the separation of religion and state leave the Hindu right free to argue for a Hind rashtra. The fact that the meaning of equalit that ought to inform this vision of secularist has not been clearly articulated leaves th Hindu right free to argue for its vision c equality. And the fact that the constitutions discourse has accepted the importance c toleration of other religions as the essenc of Indian secularism means that the Hind

right is free to argue that Hinduism alone provides the basis for a tolerant, secular state

On one hand, the Supreme Court can simply be seen to have been guided by the basic dictates of constitutional secularism, and upon seeing the way in which the BJP appealed to this constitutional discourse, rightly concluded that there was no violation of secularism On the other hand if constitutional secularism is to be guarded and protected by the judiciary we might reasonably expect the courts to take a harder look at the claims before it. We might reasonably expect the courts to look beneath the surface of these claims and interrogate whether the claims of the Hindu right are in fact consistent with the principles of constitutional secularism. And we might, quite reasonably, expect the court to do so before it condones the claims of the Hindu right to secularism But in the Manohar Joshi case, such reasonable expectations were not met Rather, the court was content to conclude that the speeches were secular simply by virtue of their appeal to the discourse of equality. The court has in effect, fallen into the complex discursive trap set by the Hindu right, wherein a fundamentally non-secular project is being packaged sold and consumed as a secular one. And in so doing, the court has, perhaps inadvertently, legitimised this version of secularism with a judicial seal of approval

It is precisely in this legitimation of the Hindu right's vision of secularism that the Supreme Court decision has such dangerous implications. The strategy of dressing up its attack on minority rights, and its effort to establish a denominational state in the language of secularism, has become enough to legitimise the Hindu right's political agenda as a secular one Despite the court's efforts to clarify that its decision does not in any way allow an appeal to religion to gain votes, the fact remains that the Hindu right will be able to continue to pursue its discursive strategy of attacking minorities through its manipulations of the discourse of secularism. It means that the Hindu right can continue its efforts to promote enmity and hatred against Muslims in the guise of secularism Although the court was clear that blatantly hateful comments like those of Thackeray would not be tolerated and would constitute a violation of the Representation of the People Act 1951 attacks on the very legitimacy of minority rights that are dressed up in the discourse of secularism will attach no such liability 101

Finally, in its rejection of the review petition the Supreme Court concluded that there was nothing inconsistent between the Bommai decision and hindutva decision <sup>110</sup>. There is a kernel of truth in the court's conclusions. There is no clearly articulated

principle of secularism that is undermined. no protection overruled, no earlier decision reversed But that is not the end of the story First the conclusion of the court that nothing in the Bommai case was of assistance in interpreting Sections 3 and 3(A) of the Representation of People Act 1951, is unsustainable - several of the opinions in the Bommai decision made specific mention of these sections of the Representation of People Act and car be seen to have set out the framework of secularism within which these sections ought to be interpreted iii Moreover a careful reading of the hindutva decision reveals many inconsistencies with the spirit of secularism affirmed by the Supreme Court in the earlier decision. The conclusions on the meaning of hindutva and on the secular nature of the speeches of the Hindu right, are fundamentally at odds with the conclusions of the full constitutional bench of the Supreme Court on both the meaning and importance of secularism and the unsecular nature of the strategies of the Hindu right

In Bommai v the Union of India the declaration of Presidential rule in four states following the destruction of the Babri Masjid on December 6 1992 by the mobs of the Hindu right was challenged The full constitutional bench of the Supreme Court upheld the validity of the declaration of Presidential rule, and in so doing passed considerable opinion on the importance and meaning of secularism in India. The opinions of three justices speaking on behalf of six members of the Supreme Court, unanimously affirmed the importance of secularism to the Indian Constitution as well as the distinctively Indian concept of secularism as the equal respect of all religions 112 Reflecting the general character or Indian secularism, each of the three opinions emphasised the equal respect of all religions. For example, Sawant J echoed the common view that in India secularism does not involve a complete separation of religion and the state but rather involves treating all religions equally 113 In his words. The ideal of a secular state in the sense of a state which treats all religions alike and displays benevolence towards them is in a way more suited to the Indian environment and climate than that of a truly secular state by which [15] meant a state which creates complete separation between religion and the state 114 According to Sawant J this concept of secularism as religious tolerance and equal treatment of all religious groups included an assurance of the protection of life, property and places of worship of all religious groups. And in his view, any act of a state government "calculated to subvert or sabotage secularism as enshrined in our constitution can lawfully be deemed to give rise to a situation in which the government of the state cannot be carried on in accordance with the provisions of the constitution. 115 In a similar vein, the opinions of Jeevan Reddy and Ramaswamy J similarly condemned the strategies of the Hindu right as non-secular 116

In stark contrast to the views expressed by the court in the hindutva case, the court in Bommai recognised that the BJP's strategy was one of attacking the right to freedom of religion of the minorities, and thus of undermining one of the very essentials of secularism Perhaps because of the extremity of the situation at hand - the destruction of the mosque the outbreak of communal riots and the declaration of presidential rule - the court in Bommai was not blinded by the discourse of secularism used by the Hindu right to advance its agenda. But in the hindutva case, it was the discourse that was effectively on trial It was the discursive strategies - of promoting hindutva of attacking minorities through the language of secularism and equality, as well as through more extremist hate speech, that was at issue Had the Supreme Court been willing to critically examine this discourse - to examine the meaning of hindutya and its implications for minorities as well as the way in which the political aspirations of hindutva are now cloaked in the rhetoric of secularism, it would have been able to see the extent to which the Hindu right was undermining the very essentials of secularism. The critical flaw in both the hindutva decision and in the subsequent dismissal of the review petition, was the failure to critically examine this discourse

At the same time, it is important to recognise that the conclusions of the Supreme Court in the Manohar Joshi case were at least partially facilitated by the fact the constitutional bench in the Bommai decision did not articulate the precise meaning of equal respect of all religions. The pronouncements of the Supreme Court in Bommai were important affirmations of the principle of secularism and equally important denunciations of the communalism of the Hindu right However, the decision remains marred by the elusive nature of the underlying conception of equality and the kind of state action mandated by this conception. It is partially because the meaning of equality remains unarticulated that the Hindu right can continue to advance its positions as a legitimate version of secularism, and that the Supreme Court can condone its position as such We do not mean to suggest that the courts alone are responsible for this increasing legitimacy of the claims of the Hindu right to secularism, nor that the courts alone will be able to reverse the trend However, we do believe that the courts can help uphold the principle of secularism by more carefully and precisely articulating the content of the equal respect of all religions,

and in so doing, may at least be able to close the doors on any further constitutional recognition of the Hindu right's claim to secularism.

### IV Conclusion

In this article we have considered the implications of the recent Supreme Court decisions under the Representation of People Act, 1951, particularly its conclusions regarding hindutva, and its assumptions about the secular nature of the Hindu right. We have argued that the conclusions of the court on the meaning of hindutva are not only unsupported on the face of the decision and with no precedential authority, but moreover are completely out of step with the historical and contemporary usage of the term. Further, the court's conclusion that there is nothing in the concept of hindutva that promotes religious enmity or hatred belies the fact that the attack on the religious minorities is a constituent element of hindutva. We have also argued that the court's decision has effectively legitimated the Hindu right's meaning of secularism and opened the door, paradoxically, to the establishment of the right's very nonsecular agenda.

The dilemmas raised in this paper lead us inexorably to the difficult question of how to move forward. Secularism is indeed an important site of struggle, which progressive groups must seek to influence if they are to challenge the increasingly successful incursions being made by the Hindu right on this front. And their response must go beyond a reassertion of the liberal meaning of secularism, that is, as based on the separation of religion and state. History has not been kind to this version of secularism in India, and there is no reason to believe that the current moment will be any kinder. We propose, then, to bracket the broader question of whether a more complete separation of religion and politics might not better serve Indian democracy, and work instead within the existing paradigm of secularism as equal respect for all religions. Perhaps one way of moving forward would be to revision secularism by challenging the meanings currently being given to its three constituent elements - equality, freedom of religion and toleration. We need to challenge the continuous equation of equality with the notion of sameness and to expand its meaning to one that will be based on disadvantage and equality in result, rather than equal treatment. Similarly, the notion of freedom of religion requires that we reexamine the norms on which such a freedom is based, that is, the primarily Hindu norms and values against which the freedom of other religions is judged. Finally, the notion of toleration needs to be unpacked to expose the way in which it is being used to attack religious minorities rather than ensure co-existence.

At the heart of the Hindu right's approach to secularism lies the policy of assimilation. This policy is aimed at ignoring any features of a social group, namely, the Muslim community, which make them different from the unstated dominant Hindu norm There is a need to attack the invidious aspects of this policy which appears so rational and reasonable on its face. It is a policy that requires the Muslim community - a historically disadvantaged and culturally distinctive group - to prove itself according to Hindu rules and standards. It further enables those espousing the cause of hindutva, who are in a position of considerable social and political power, to project their normative values as ones that are neutral and unbiased.

The recent election results in India are indicative of the general persuasive power of the Hindu right's rhetoric around secularism and the appeal of the hindutva agenda. It is essential for progressive groups to work with the concept of secularism that has gained historical and political importance, which is based on the equal respect of all religions, to be able to challenge the pretentious alliance of the Hindu right with this concept. Progressive groups and individuals must counter the Hindu right by engaging equally forcefully and persuasively in this discursive terrain in order to counter the hegemonising potential of the Hindu right's vision of the world - a world that has perilous consequences for anyone who is 'different'.

### Notes

- I By 'Hindu right', we are referring to the association of organisations and political parties the Bharatiya Janata Party (BJP), the Rashtriya Swayam Sevak Sangh (RSS), and the Vishwa Hindu Parishad (VHP), as well as the Shiv Sena, who are united in their pursuit of hindutva and the establishment of a Hindu rashtra in India. This movement has been variously labeled and debated as hindu fundamentalist, Hindu fascist, and/or Hindu nationalist, among others. We use the term 'Hindu right' to demarcate both the communal and highly conservative nature of their agenda.

(1995) 7 SCALE 60; Sadhvı Rithambara v Haribansh Singh Ramakbal Singh and Anr. (1995) 7 SCALE 60; Ramakant Mayekar v Celine D'Silva, (1995) 7 SCALE 72, Sh Chhugann Bhujbal v Celine D'Silva and Anr. (1995) 7 SCALE 72: Balasaheb Thackeray v. Celine D'Silva and Anr. (1995) 7 SCALE 72; Moreshwar Save v. Dwarkadas Yashwantroo Pathrikar, (1995) 7 SCALE 85, Chandrakanta Goyal v Sohan Singh Jodh Singh Kohli, (1995) 7 SCALE 88; Suryakant Venkatrao Mahadik v Saroj Sandesh Naik, (1995) 7 SCALE 92.
- 6 Section 123(3) provides: "The appeal by a candidate or his agent or by any other person with the consent of a candidate or his election agent to vote or refrain from voting for any person on the ground of his religion, race, caste, community or language or the use of, or appeal to religious symbols or the use of, or appeal to, national symbols, such as the national flag or the national emblem, for the furtherance of the prospects of the election of that candidate or for prejudicially affecting the election of any candidate."
- 7 Section 123 (3)(A) provides: "The promotion of, or attempt to promote, feelings of enmity or hatred between different classes of the citizens of India on grounds of religion, race, caste, community or language, by a candidate or his agent or any other person with the consent of a candidate... for the furtherance of the prospects of the election of that candidate or for prejudicially affecting the election of any candidate.."
- 8 Charges were brought against 12 individuals, but several of the charges were joined into a single case, resulting in seven separate decisions, supra note 5.
- 9 1995 (7)SCALE 1.
- 10 Ibid, p 7.
- 11 Ibid, p 13, para 20.
- 12 In considering the meaning of this section, the Court quoted at length from the earlier Supreme Court decision in Zivauddin Burhanuddin Bukhari v Brijmohan Remdass Mehra 1975 (Suppl)SCR 281: "It seems to us that section 123, sub s (2),(3) and (3A)were enacted so as to eliminate, from the electoral process, appeals to those divisive factors which arouse irrational passions that run counter to the basic tenets of our Constitution, and, indeed, of any civilised political and social order. Due respect for the religious beliefs and practices, race, creed, culture and language of other citizens is one of the basic postulates of our democratic system...". Ibid p 14, para 22. In Bukhari, the court further held: "We have to determine the effect of statements proved to have been made by a candidate, or, on his behalf and with his consent, during his election, upon the minds and

- feelings of the ordinary average voters of this country in every case of alleged corrupt practice...In all such cases, the line has no doubt to be drawn with care 20 as not to equate possible impersonal attacks on religious bigotry and intolerance with personal ones actuated by bigotry and intolerance.."
- 13 In considering whether section 123 constituted a reasonable restriction to the right to free expression which was permissible under Article 19(2) of the constitution, the Court concluded that the provision should be upheld in the interests of 'decency or morality' The Court was of the view that this clause was not confined to sexual morality, but included action that was against the current standards of behaviour or propriety. Supra note 1, p 16, para 28. It held that "In a secular polity, the requirement of correct behaviour or propriety is that an appeal for votes should not be made on the ground of the candidate's religion which by itself is no index of the suitability of a candidate for membership of the house." The soliciting of votes during an election on the grounds of a candidates religion in a secular state was considered by the Court to be against the "norms or decency and propriety of the society," (ibid. para 29) and a provision restricting such activity constituted a reasonable fetter on the right to free expression
- 14 Ibid, p 22, para 37.
- 15 Ibid.
- 16 Supra note 1, p 22, para 39.
- 17 Ibid.
- 18 Ibid, p 59
- 19 The notices against Rithambara were also dismissed, on the basis that she had not been given notice as required under the Representation of the People Act, 1951, and was thus denied the opportunity to defend herself against the allegation of corrupt practices.
- 20 Again, on the question of the video tape which allegedly contained express appeals to hindutva and the Hindu religion, the Court held that neither the content of the videos nor the candidate Ramkant Mayekar's consent to them, had been proven The conviction against Chandrakanta Goyal, a BJP candidate, was dismissed on similar grounds there was in the Court's view no direct evidence of the appellant's consent to the speeches of Thackeray or Mahajan.
- 21 Suryankant Venkatrao Mahadik vs Saroj Sandesh Naik, p 99
- 22 Mohammed Aslam Bhure v Union of India, supra note 2. The Court stated that "Article 32 of the Constitution is not available to assail the correctness of a decision on merits or to claim its reconsideration". In the Courts view, this alone was sufficient to dismiss the writ petition.

- 38 Ibid, p 24, para 44.
- 39 See for example Anil Nauriya, 'The Hindutva Judgments: A Warning Signal', Economic and Political Weekly, January 6, 1996, p 11, who argues that the Court has failed "to recognise that hindutva as an expression has a special meaning and is associated with the social and political philosophy of Savarkar and Golwalkar, that is, the Hindu Mahasabha and the RSS." For a general discussion on the concept of Hindutva in the writings of the Hindu right, see Rizwan Qaiser, 'The Conceptualisation of Communalism and 'Hindu rashtra'" in Rudolf C Heredia and Edward Mathias (eds), Secularism and Liberation: Perspectives and Strategies for India Today, (Indian Social Institute, New Delhi, 1995), p 100. Rizwan Oaiser has traced the history of the terms 'Hindu rashtra' and 'hindutva'. He argues that initially the term Hindu rashtra had no communal overtones, but was a strategy of resistance to British colonial rule and cultural domination. However, in the 1930s and 1940s, certain Hindu organisations wanted to establish a Hindu rashtra that meant to total subjugation of all non-Hindus to a 'master' race. Oaiser points out that the main exponents for this version of a Hindu rashtra were V D Savarkar, Shyama Prasad Mookerjee and

- M S Gofwalkar. He describes their conceptualisation of a Hindu rashtra as follows: "Firstly, all Hindus were one entity culturally and politically; secondly the interests of all the Hindus was the same, which could be jeopardised if they were not united; thirdly, the Muslims were the biggest threat to the Hindu interest, therefore necessitating the sharpest hostility towards them in political as well as cultural terms."
- 40 Savarkar, Hindutva: Who is a Hindu (1929). cites 4th edition (Gokhole, Pune, 1949); p.3.
- 41 Ibid, pp 3-4.
- 42 Ibid, p 68.
- 43 As Purshottam Agarwal has argued in 'Savarkar, Surat and Draupadi' in Tanika Sarkar and Urvishi Butalia (eds), supra note 3, p 41, although Savarkar was by no means the first to attempt a racial reconstruction of the traditional religious community, he was undoubtedly the most articulate. "It was his discourse that attempts to theoretically construct a Hindu political community which shared the same racial bonds and historical memories came into shape."
- 44 Savarkar, supra note 40, p 81.
- 45 Ibid, pp 3-4.
- 46 Ibid, p 92.
- 47 In Savarkar words, "...in this prolonged furious conflict our people became intensely conscious of ourselves as Hindus and were welded into a nation to an extent unknown in our history.." Ibid, Savarkar, p 45. Mookerjee's concept of a Hindu Rashtra was slightly distinct from Savarkar's according to Qaiser Mookerjee was concerned about the humiliation of Hindus and Bengal and the failure of the Congress Party to defend Hindu rights He subsequently joined Savarkar as a member of the All India Hindu Mahasabha and began to adopt the communal rhetoric of Savarkar While Savarkar's preoccupation was with the threat of Muslim rule, Mookerjee used the concept of Hindu Rashtra primarily to describe how the Hindus alone would liberate the country from British rule

- 66 See Basu, et al, Khaki Shorts, Saffron Flugs, Orient Longman, New Delhi, 1993.

- 67 Sec ibid.
- 68 The historical use of the term 'Indianisation' is similarly obscured in the Supreme Court judgment. The Court fails to recognise that the term was used by Jana Sangh leaders in the 1960s who directed it at the Muslims and that it contained the insinuation that they were not Indian enough. "For the court to suggest that 'hindutva' is merely to be understood as a synonym of 'Indianisation', therefore, contains an element of truth quite different from what the court may have had in mind; it is such a synonym but principally in the RSS discourse." see note 39, p 11.
- 69 The Court did attempt to distinguish the meaning of the word in the abstract from the way in which communalists and/or fundamentalists may have attempted to misuse the word. For instance, the Court stated, p 24: "The mischief resulting from the misuse of the terms by anyone in his speech has to be checked and not its permissible use. It is indeed very unfortunate, if in spite of the liberal and tolerant features of 'Hinduism' recognised in judicial decisions, these terms are misused by anyone during the elections to gain any unfair political advantage. Fundamentalism of any colour or kind must be curbed with a heavy hand to preserve and promote the secular creed of the nation." In so doing, the court was attempting to distance itself from the communalist agenda of the Hindu right, and should not be seen to be explicitly endorsing this agenda. Our point, however, is that the term cannot be abstracted from the political and historical context which has given meaning to 'hindutva'. It is simply not possible to speak of hindutva as a abstract representation of 'a way of life of the subcontinent', and in so doing, the court has, perhaps inadvertently, condoned the discursive agenda of the Hindu right.
- 70 We do not mean to suggest that the court has done so intentionally In other words, we are not suggesting that the court has been communalised, and is now simply espousing the views of the Hindu right. Rather, the flaws in the Supreme Court's reasoning can be seen to lie in the court's failure to appreciate the political and historical context of the term 'hindutva', as well as the unstated norms of the majority that are so often reflected in legal decisions.
- 71 See for example SC. No Misuse of Religion', Communalism Combat, No 21, April 1996, p 4.
- 72 There is also the fact that the court has established a very strict test for establishing that a candidate has consented to the views of other speakers associated with the his/ her political party and/or other organisation of the Hindu right. The mere presence of a candidate, on stage with another speaker who appeals to religion or promotes enmity and hatred is not sufficient proof of that candidate's consent The implication of this conclusion is that the Hindu right can carefully orchestrate its rallies and ensure that the appeals to religion and the promotion of religious enmity comes from speakers other than the candidates. The BJP and Shiv Sena will thus be able to continue to reap the benefits of the dirty work done by the

- RSS and the VHP, and indeed, even by the non-electoral members/leaders of their own parties. This question of consent is to be heard by the constitutional bench of the Supreme Court: see 'Constitution Bench Will Decide Religion Issue:SC'. The Times of India, April 17, 1996.
- 73 See BJP, For a Strong and Prosperous India Election Manifesto, 1996.
- 74 Interestingly, even one of the articles in the Organiser agreed that in finding Thackeray guilty of a corrupt practice, "the Court rightly deplored bigotry'. Organiser, December 24, 1995, p 3. However, the article continued..."Bigotry is bad whether it is religious or linguistic, or for that matter casteist. Pseudo-secularists indulging in minorityism and casteists masquerading as messiahs of 'social justice' stand exposed before the bar of public opinion. They are guilty of spreading communalism and creating social disharmony." While condemning Thackeray's speech as bigotry, the Organiser article nevertheless used the opportunity to turn the criticism back onto the so-called 'pseudo-secularists', who are alleged to be the real bigots. It is also interesting to note that in the 1996 national election campaign, the BJP has distanced itself from some of its more vociferous proponents of hate speech towards Muslims, most notably Uma Bharati and Sadhvi Rithambara ('Uma, Sadhvi are not on BJP Bandwagon', The Times of India, April 14, 1996), a shift that is also in keeping with the decision to have the more moderate Vajpayee lead the party, displacing the more militant Advani. It is, however, too early to tell whether this shift, obviously calculated to maximise their popularity at the polls, represents anything more permanent. Despite the condemnation of the shift in the party strategy from within its own ranks, most notably by Uma Bharati, there is ample evidence to suggest that the BJP retains its commitment to undermining minority rights. For instance, one of the election advertisements of the BJP, significantly with Advani's picture, not Vajpayee's, continues the attack on Muslim minorities under the traditional slogan, 'Justice for all, Appeasement for None'. Likely, the shift' is simply an effort to be somewhat more careful during the election campaign of not violating the prohibition on the promotion of religious enmity, and part of its bid for political power, by trying to attract voters who are disillusioned with the Congress government, but uncomfortable with the more militant face of the party.
- 75 There is increasingly a question of whether the laws directed at prohibiting hate speech can mean anything at all, with the increasing legitimacy being accorded to the speech of the Hindu right. As the speech of the Hindu right becomes more mainstream, and more part of the collective common sense of an increasing number of Hindu subjects, the efficacy of the hate speech provisions, intended only to police the margins of intolerable speech, is undermined. For a more detailed discussion of this problem, see Ratna Kapur, 'Who Draws the Line? Feminist Reflections on Speech and

- Censorship', Economic and Political Weekly, April 20-27, 1996, WS15-30.
- 76 See supra note 5.
- 77 Supra note 1, pp 11-12, para 16.
- 78 Ibid, para 18.
- 79 Supra note 5, p 83, para 27.
- 80 K T Shah, a member of the Constituent Assembly, attempted on two separate occasions to have the term included in the constitution, but was not successful. The term was only inserted into the constitution with the 42nd Amendment in 1976.
- 81 This conceptualisation of secularism was seen most clearly in the Karachi Resolution of the Congress on Fundamental Rights (1931), which provided: "the state shall observe neutrality in regard to all religions". As many commentators have observed, however, Nehru eventually compromised on his vision of secularism, and adopted the equal respect of all religions. For a discussion see Asgar Ali Engineer, "Secularism in India Theory and Practice' in Heredia and Mathias (eds), supra note 39, p 40.
- 82 See generally, Donald Eugene Smith, India as a Secular State, Princeton University Press, Princeton, 1964.
- 83 There has however been considerable, criticism of the extent to which the Indian constitutional and political framework has upheld these values For example, Smith, (ibid) was critical of the extent to which these principles were compromised with the constitution, which allowed for state intervention in the affairs of religion.
- 84 See Luthera, The Concept of Secular State and Indiq, Oxford University Press, Calcutta, 1964.
- 85 Smith, supra note 82.
- 86 The argument that secularism in India does not mean a wall of separation between religion and politics, but rather the equal respect of all religions, is common throughout the literature. For a typical example, see Engineer, supra note 81, who argues that the western concept of secularism, which involves indifference to religion, has never taken root in India. "The concept of secularism in India emerged in the context of religious pluralism as against religious authoritarianism in the west... It was religious community, rather than religious authority, which mattered in the Indian context."

This dominant concept of secularism, is however, a contested one. Some question whether secularism is even an appropriate normative value within the Indian context, or whether it represents the imposition of a western, colonial normative value, illsuited to the historical realities of Indian society. (see Ashis Nandy). Others question the appropriateness of the particular model of secularism, arguing that Indian democracy might be better served by a more complete separation of religion and politics. For example, Upadhyaya argues that the equal respect for all religions has been responsible for communalising politics in 'The Politics of Indian Secularism, Its Practitioners, Defenders and Critics', Occasional Papers on Perspectives in Indian Development, Nehru Memorial Museum and Library, Number XI, January 1990, and in 'The

### STAFF POSITION

### at

### **National Centre for Advocacy Studies**

### Pune

NCAS is a growing organisation committed to strengthening the capacity of social action groups in bringing about equitable social change through effective public policy initiatives. NCAS provides training, research and campaign support to social action groups and concerned citizens to further social justice causes. We are looking for people with commitment to social equity and human rights.

NCAS has following staff positions available in Pune:

- 1. Research Co-ordinator (Research and Publication):
  Postgraduate, with a minimum of 5 years research experience in social sciences or allied fields.
- 2. Two Research Assistants (Research and Documentation):

  Postgraduate with a minimum of 3 years experience in social research.
- 3. Programme Associate: Campaigns and Field Work
  Postgraduate with a minimum of three years of research experience with social
  action groups/advocacy campaigns, and experience in social action research.

All candidates must be willing to travel, have good communication skills, excellent writing ability in English and be computer literate.

So if you are a creative trainer

OR

Able to do action research with grass-roots' groups

AND

You want to be a part of the team to develop the first institution of its kind in South Asia

Send us together with your resume, published research paper/article, an autobiographical sketch (not more than two typewritten pages) telling us what your vision and perspective are and how they can contribute to our work.

Your application, mentioning the post applied for, should reach us at our address given below before October 17, 1996.

The Director:

**National Centre for Advocacy Studies** 

20 Anurekha Society, Navasahyadri Colony, Off Karve Road, Pune 411 052.

Politics of Indian Secularism', Modern Asian Studies, Vol 26, No 4, 1992, p 815. He argues that the concept of sarva dharma sambhava has failed to transcend the categories of communalism and that this approach to secularism has been an underlying cause of the communalisation of Indian politics. This approach, he argues, has given rise to a majoritarian politics in which "representative politics based on adult franchise have become a contest in which communities are mobilised in a competition for votes, and in which the majority community must always win" He argues that the major lacunae in the conceptualisation of secularism in India "lies in the definition of secularism...in that secularism has not been clearly defined in terms of the separation of religion from politics, either in its constitutional form or in the conventions of the political process."

Yet others argue for a total reconceptualisation of secularism within the Indian polity. For example, Akeel Bilgrami in 'Two Concepts of Secularism: Reason, Modernity and Archimedian Ideal', Economic and Political Weekly, July 9. 1994, pp 1749-55 has argued for a negotiated secularism that could emerge "by negotiation between the substantive commitments of particular religious communities." In a somewhat different vein, Partha Chatterjee in 'Secularism and Toleration', Economic and Political Weekly, July 9, 1994, argues for a reconfiguration of the problem of secularism; that is, of a shift in the understanding of the nature of the challenge presented by the Hindu right as one of minority rights, and argues for a reconceptualisation of the concept of toleration.

In our comments, we focus on the constitutional discourse of secularism which has worked largely within the dominant vision of the equal respect of all religions. In so doing, we bracket the broader question of whether this is in fact the most appropriate vision of secularism — a question that we believe will ultimately need to be addressed to resolve the increasing crisis of secularism in India.

See for example P B Gajendragadkar, 'Secularism: Its Implications for Law and Life in India' in G S Sharma (ed), Secularism: Its Implications for Law and Life in India, N M Tripathi, Bombay, 1966, p 4: "The state does not owe loyalty to any one particular religion as such; it is not irreligious or anti-religion; it gives equal freedom for all religions and holds that the religion of the citizen has nothing to in the matter of socio-economic problems"; R L Chaudhari, The Concept of Secularism in Indian Constitution, (Uppal Publishing House, New Delhi, 1987) who writes at p 169, "the absence of complete separation between the state and the religion is because of the character of Indian society which is basically religious... Separation of the state from the religion is not the basis of Indian secularism, as it is in other countries. Indian Constitution does not reject religion. On the contrary, it respects all religions". See also J M Shelat, Secularism: Principles and

Applications (NM Tripathi, Bombay, 1972), pp 121-22;

88 See for example the work of P K Tripathi, 'Secularism, Law and the Constitution of India' in M S Gore (ed), Secularism in India (Bombay, 1966), who articulated three basic principles of Indian secularism: (1) the principle of the primacy of the individual, who is placed above and before religion; (2) the principle of freedom of religion and religious denomination; and (3) the principle of toleration. Neutrality is thus replaced with an emphasis on toleration. See also Tripathi, 'Secularism: Constitutional Provision and Judicial Review' in G S Sharma, supra note 87, p 165.

Upendra Baxi, in 'The Struggle for the Redefinition of Secularism in India: Some Preliminary Reflections' in Heredia and Mathias, supra note 39, argues that these principles find recognition in the Indian Constitution. Baxi identifies several other features of Indian secularism that have been affirmed through constitutional decisions:

- i) the state by itself shall not espouse or establish or practice any religion;
- ii) public revenues will not be used to promote any religion;
- iii) the state shall have the power to regulate any "economic, financial or other secular activity" associated with religious practice (Article 25(2)(a) of the Constitution);
- iv) the state shall have the power through the law to provide for "social welfare and reform or the throwing open of Hindu religious institutions of public character to all classes and sections of Hindus" (Article 25(2)(b) of the Constitution);
- v) the practice of untouchability is constitutionally outlawed by Article 17;
- vi) every individual person will have, in that order, an equal right to freedom of conscience and religion;
- vii) these rights are furthermore subject to other fundamental rights in Part III,
- viii) the courts, especially the Supreme Court, shall have the final 'say' on adjudging state action as valid or otherwise under the above principles. Another feature was added through a constitutional amendment which imposed a fundamental duty on all citizens to "preserve the rich heritage of our composite culture" (Article 51-A(f)). Baxi places considerable reliance on the courts and judiciary in determining the meaning of secularism in India and argues that such constitutional perspective has been absent from public debate. He argues that the judiciary can bring a sharper focus to the debate. While we agree that the judiciary has a role to play, the hindutva decision highlights how the judiciary has failed to so do.
- 89 Although there are some echoes to the principle of neutrality within the constitutional discourse, these discussions tend to infuse the concept of neutrality with the ipirit of 'saarva dharma samabhava'. Neutrality to all religions tends not to be associated with a wall of separation, as it is in the American context, but rather with the idea that the state must not discriminate against any religion.
- 90 Smith, supra note 82, p 133, has argued that

the third principle of liberal democratic secularism regarding the separation of religion and state includes two distinct principles: "(1) the non-interference of the state and religious organisations in each other's affairs; (2) the absence of a legal connection between the state and a particular religion The Indian Constitution...does not subscribe to the first principle; it does however uphold the second".

- 91 Kapur and Cossman, 'Communalising Gender' supra note 3.
- 92 For a detailed discussion of these competing visions of equality in the context of Indian constitutional law, see Ratna Kapur and Brenda Cossman, "On Women, Equality and the Constitution: Through the Looking Glass of Feminism", National Law School Journal, Special Edition, Feminism and Law, (Bangalore, 1993), p 1. See also Kapur and Cossman, Subversive Sites, supranote 3.
- 93 Ibid.
- 94 See Kapur and Cossman, 'Communalising Gender' and Subversive Sites, supra note 3.
- 95 Article IV, BJP Constitution and Rules, as approved by the National Council, May 2, 1992.
- 96 See BJP manifesto as quoted in speech delivered by L K Advani in Parliament on November 7, 1990. Interestingly, the 1996 BJP Election Manifesto does not mention secularism at all.
- 97 L K Advani, Press Conference, January 18, 1993 Similar statements can be found in articles and commentaries throughout the Organiser. For example, Madhok writes, "There are three universally accepted essential postulates of a secular state (1) The state must not discriminate between its citizens on the basis of religion or form of worship. (2) There should be uniform laws for all citizens. (3) All citizens should be equal before the law. Balraj Madhok, 'An Open Letter to the President, Prime Minister, Party Leaders and Editors', Organiser, republic day 1993, Nationalism Special, p 52. Within this definition, secularism is rendered synonymous with the formally equal treatment of all citizens. Significantly, there is no mention of a non-denominational state within this definition of secularism.
- 98 K Jayaprasad, RSS and Hindu Nationalism Deep and Deep, New Delhi, 1991, p.93. See also Nana Deshmukh, RSS: Victim of Slander Vision Books, New Delhi, 1979.
- 99 For a discussion of the dangers of majoritarianism that lies within the vision of secularism, see Upadhyaya, 'The Politics of Secularism in India', supra note 86.
- 100 H V Seshadri, 'Strange Political Diction', Organiser, February 4, 1990
- 101 Golwalkar, From Red Fort Grounds.
- 102 Balasheb Deoras, Answers Questions, Sahitya Sindhu, Bangalore, 1984, p 53.
- 103 Organiser, supra note 100.
- 104 The term 'dharma rajya' used by Upadhyaya and taken up by the Jana Sangh Party and subsequently by the BJP can be seen to be a rough equivalent of Hindu rashtra, a term that has since been explicitly adopted by the BJP.
- 105 Upadhyaya, Integral Humanism, p 53.
- 106 Ibid.
- 107 The 1996 BJP election manifesto includes

- a commitment to amending Article 30, although it does not specify the nature of the amendment. The manifesto states (p 64) that the BJP is committed to: "Ensure equality for all and discrimination against none on the grounds of religion in matters of education by amending Article 30."
- O8 Conversions from Hinduism to either Islam or Christianity has long been a major theme within the Hindu right. Savarkar, Golwalkar, as well the contemporary ideologues such as Seshadri and Deoras have focused attacks on the proselytising religions, the problem of conversions, and the goal of bringing those who have strayed from Hinduism back into its folds. Similarly, the Organiser is filled with articles dealing with the problem of conversions, detailing recent conversions of Hindus to other religions, and condemning these proselytising religions for their intolerance.
- 109 This seems to be precisely the strategy adopted by the BJP in its 1996 election campaign. It has placed the face of moderation at the front of the party, displacing and even distancing itself from the more militant faces. At the same time, the BJP continues to campaign on its platform of secularism, which continues to include all of its usual characteristics: 'one nation one people', repeal Article 370, uniform civil code, human rights commission, detection and deportation (of Bangladeshi immigrants). See also discussion supra note 74.
- 110 Mohammed Aslam Bhure v Union of India, supra note 2, p 65.
- 111 Supra note 2, Sawant and Kuldip Singh J J, at paras 148, 149; K Ramaswamy J, at paras 189, 196
- 112 The opinions dealing with secularism were delivered by Justice Sawant (on behalf of Kuldip Singh J with Pandian, J concurring); Justice Jeevan Reddy (on behalf of S C Agrawal, J, with Pandian J, also concurring); and Justice Ramaswamy.
- 113 Quoting and reviewing at length with approval from a 1965 lecture by M C Setalvad, Sawant J noted that secularism in India does not imply a complete separation of religion and state as in the US. "In our country, all religions are placed on the basis of equality".
- 114 Sawant J further wrote: "... Secularism under our Constitution is that whatever the attitude of the state towards the religions, religious sects and denominations, religion cannot be mixed with any secular activity of the state. In fact, the encroachment of religion into secular activities is strictly prohibited. This is evident from the provisions of the Constitution to which we have made reference above. The state's tolerance of religion or religious belief does not make it either a religious or a theocratic state. When the state allows citizens to practice and profess their religions, it does not either explicitly or implicitly allow them to introduce religion into non-religious and secular activities of the state. The freedom and tolerance of religion is only to the extent of permitting pursuit of spiritual life which is different from the secular life... This is also clear from subsection (3) of Section

- 123 of the Representation of the Peoples Act, 1951...[and] subsection 3(A) of the same section...religious tolerance and equal treatment of all religious groups and protection of their life and property and of the places of their worship are an essential part of secularism enshrined in our Constitution."
- 115 Ibid, at para 92. Although each of the decisions echoed the general idea of Indian secularism as the equal respect of all religions there were however slightly different emphases in each of the decisions. For example, while Sawant J most strongly emphasised the equal respect of all religions and its requirement of toleration, Jeevan Reddy's decision placed some emphases on the idea of the separation of religion and politics. After a long discussion of the requirement of equal respect, Jeevan Reddy I stated: "In short, in the affairs of the state religion is irrelevant; it is strictly a personal affair. In this sense...our Constitution is broadly in agreement with the US constitution, the First Amendment whereof declares that 'Congress shall make no laws respecting an establishment of religion or prohibiting the free exercise thereof...' Perhaps, this is an echo of the doctrine of separation of church and state; maybe it is the modern political thought which seeks to separate religion from the state - it matters very little." By way of contrast again, Ramaswamy J's opinion, while also speaking of the equal respect of all religions, included several references to the concept of neutrality.
- 116 For example, Jeevan Reddy J stated, at para

243: "...it is clear that if any party or organisation seeks to fight the elections on the basis of a plank which has the proximate effect of eroding the secular philosophy of the Constitution would certainly be guilty of following an unconstitutional course of action...Introducing religion into politics is to introduce an impermissible element into body politic and an imbalance in our constitutional system. If a political party espousing a particular religion comes to power, that religion tends to become, in practice, the official religion...This would be plainly antithetical to Articles 14 to 16, 25 and the entire constitutional scheme adumbrated hereinabove. Under our Constitution, no party or organisation can simultaneously be a political and a religious party." Ramaswamy J's decision similarly strongly condemns the rise of fundamentalism as a violation of the constitutional principle of secularism For example, at ibid para 132, he writes: "Rise of fundamentalism and communalisation of politics are anti-secularism. They encourage separatist and divisive forces and become breeding grounds for national disintegration and fail the parliamentary democratic system and the Constitution." Sawant J, Jeevan Reddy J and Ramaswamy J were all of the view that the declaration of presidential rule was not unjustified, since there was sufficient evidence available to the president that state governments were not acting in accordance with the provisions of the Constitution. There was, in other words, a reasonable apprehension that the constitutional principle of secularism was in jeopardy.

### APPOINTMENTS

### INDIAN INSTITUTE OF EDUCATION,

128/2, Kothrud, Pune - 411 029.

- 1. Indian Institute of Education, 128/2, Kothrud, Pune 411 029, invites applications for the posts of Lecturers in the disciplines of Social Anthropology, Social Psychology, Political Science, Communication and Information Technologies, Management and/or Public Administration with Sociology/Commerce/a suitable science degree, as basic discipline.
- Qualifications and pay scale as prescribed by UGC. Probation period : 2 years.

Applications alongwith bio-data giving age, qualifications, experience of teaching and research should reach the Institute's Registrar before 10 October, 1996.

### **Understanding the Anthropological Method**

Meenakshi Thapan

I AM writing in response to Carol Upadhya's review (EPW, ''Native' Voices and Ethnographic Noise', July 20, 1996, pp 1932-34). Upadhya has undertaken a review of two books on women in India by anthropologists. I am not here to defend the books against the disdainful and condescending comments made by Upadhya. The authors of the books under review might perhaps decide to take up Upadhya on those issues. I would however like to comment on the method that Upadhya chooses to debunk in a most ill-informed and casual manner.

Upadhya expresses the view that the "anthropological tradition... presumes that the people whom they study are automatons who only reproduce their traditional structures, rather than thinking and acting persons..." (p 1933). If Upadhya is at all familiar with the "anthropological tradition" it will be clear to her that there is no monolith tradition but several traditions and that the discipline has been increasingly questioning the earlier assumptions of anthropological discourse [most recently, see Das 1995: Introduction]. Of course, never has an anthropologist seen her subject of study as an "automaton" and, as Upadhya does not tell us who she has in mind, one can only conclude that she is completely ignorant about the bonds anthropologists develop with subjects in the field [see, for example, Madan 1975, Srinivasan 1976] which is only possible when the anthropologist is interacting with the subject. It also appears that Upadhya is not very familiar with the works of Vincent Carapanzano, Clifford Geertz (to whom a fleeting reference is made) and Paul Rabinow, among others, which indicate the intersubjective nature of fieldwork and understanding and certainly not the top-down approach which she thinks is representative of anthropology. Not-so-recent postmodernist writings within anthropology, such as those of James Clifford and others, argue precisely against viewing the subject as other and of transcending one's position in the field as ethnographer. Feminist anthropologists such as Marilyn Strathern and Mascia Lees et al have in the pages of the journal Signs argued for engagement with the subjects of study in order to give voice to the often voiceless and invisible other as well as pose the question of political commitment to the subjects whose lives one chooses to examine. Perhaps Upadhya first needs to understand the many dimensions and debates of contemporary anthropological discourse before she sets out to dismiss it.

Upadhya also mentions the "trendy theoretical problematic" of "structure versus agency mediated by resistance" which she sees as being empty rhetoric. I think it is important to understand that the notion of structure and agency is around since Marx and the problem of resistance has been the preoccupation of social scientists in one way or another, In education, Paul Willis's important work on working class children (Learning to Labour) in which he examines resistance in educational processes was published in 1977. James Scott's well known work on peasant resistance was published in 1985. In an important paper, Gillian Hart (1991) has critiqued Scott and presented a more nuanced understanding of forms of resistance. Veena Talwar Oldenburg (1990) and Rosalind O'Hanlon (1991) have analysed resistance among women in northern and colonial western India respectively. Paola Bacchetta (1994) critically presents a case of resistance drawn from the life of a Hindu nationalist woman in contemporary India. The work of Foucault has of course come under severe criticism by feminists precisely for the lack of a coherent theory of resistance [for example, Ramazanoglu 1993, Thapan 1995]. It is therefore not exactly a "trendy" pastime to be concerned with the possibilities of rebellion and change in everyday lives. It is a real concern of those of us who seek to understand social processes and the experience of individuals within them in terms of the structures of power and control as well as the forms of resistance to them.

Upadhya objects to this concern primarily because of the lack of political commitment and engagement which she thinks is only present in the writings on women by activists. She also complains that anthropological texts on women in India are devoid of references to work within India "on women and gender" (whatever that means). Upadhya perhaps needs to carefully examine the bibliographies in such anthropological writings on women in India as Leela Dube et al (1986), Kalpana Ram (1992), Kamala Ganesh (1993), among

Upadhya ends her, if I may say so, rather incoherent review of the two texts, by saying that ethnographies "end up saying what their authors want them to say..." because of the "highly personalised and subjective nature of fieldwork". In the preceding paragraph, she says that it is because of their "detachment" that ethnographies fail to understand women's lives. It is clear that Upadhya is rather confused about anthropology and cannot make up her mind as to what she finds objectionable in it. She critiques postmodernist anthropology for its inability to deal with the "ethnographer's own subjectivity and her power to construct her subject(s)". Surely this is the dilemma of all writing, whether by dull, ignorant anthropologists or by sympathetic, with-it activists, so that the constitution of the ethnographic text is always never a complete statement of absolute truth but only a fragment of understanding social reality, a contribution towards a deeper understanding of the whole, a movement towards an intersubjective understanding of social relations in everyday life. As anthropologists, we do not set out to "construct subjects", to reveal the world or to radically alter it. The ethnographer is the faithful recorder and interpreter, and not some powerful creator, of social reality. We. only seek to understand it through an intersubjective process in which we consciously seek to represent subjects and their everyday lives through their narrative accounts, our observation of their lives and social practices, and an understanding of the web of social relationships that constitute society.

# DISCOUNT AND FINANCE HOUSE OF INDIA LIMITED

Regd Office 306-307 Varma Chambers, 3rd Floor, Homji Street, Fort, Mumbai-400 001

Statement of Shri P. G. Kakodkar, Chairman of the Board of Directors of the Discount And Finance House of India Limited at the Eighth Annual General Meeting held at Mumbai on September 18, 1996

I have great pleasure in welcoming you to this Eighth Annual General Meeting of the Company

Before I review the performance of the Company, I would like to place on record our appreciation of the distinguished service rendered by Shri S S Tarapore, Deputy Governor, Reserve Bank of India during the period he was associated with the Company in various capacities. Shri Tarapore was one of the Members of the Working Group on Money Market, which recommended wide ranging reforms in the Indian Money Market, including setting up of DFHI Subsequently, as one of the founder Directors of the Company he contributed significantly for its development and growth During his stewardship as Chairman of the Board of Directors since August, 1993 the Company registered all round progress in major segments of its activities and acquired the status of a Primary Dealer in Government Securities Market It was during this period that the process of divestment of a major part of the shareholding of the Reserve Bank of India in the Company was also successfully completed. The Board of Directors of the Company has placed on record its appreciation for the guidance, support and strength provided to the Company by Shri Tarapore from time to time On behalf of the Company, the Board of Directors and on my own behalf, I take this opportunity to convey our best wishes to Shn Tarapore

### Performance during 1995-96

The report of the Directors and the audited accounts of the Company for the year ended March 31, 1996 have already been circulated I would, however, like to briefly highlight the salient features of the Company's performance in the major segments of money and securities market during the financial year 1995-96

The Company has been accredited as a Primary Dealer in the Government securities market with effect from February 29, 1996. It participated in all the auctions and floatations of Government of India Treasury bills and dated securities during the year under review. The Company's success ratio in auctions and total turnover ratio both in respect of Treasury bills as also dated securities during 1995-98 were well above the minimum levels prescribed by the Reserve Bank of India in the relative guidelines.

The aggregate turnover of the Company in the primary and secondary markets in Treasury bills segment during the year under review was lower at Rs 13,491 crore as against Rs 35,125 crore achieved in the previous year This was due mainly to a sharp decline

in the tradeable stocks of Treasury bills during the year The stock of 364 days Treasury bills in the system declined sharply by Rs 6,288 crore in 1995-96 as against an increase of Rs 6,732 crore in the preceding year Likewise, the stock of 91 days Treasury bills available for trading in the secondary market was also quite low as a major portion of these bills in the primary auctions was subscribed by noncompetitive bidders and the Reserve Bank of India The Company's aggregate turnover in the primary and secondary markets in the Central Government dated securities was, however, significantly higher at Rs 60,143 crore as compared with Rs 13,195 crore in the previous year. The bulk of this turnover was on account of 'Repo transactions as borrowers preferred to borrow monies for longer periods under 'Repo' arrangements instead of borrowing by way of call money on a day-today basis with a view to hedging against the volatility in call rates. The 'Repo' transactions were also undertaken by the Company to facilitate intervention by the Reserve Bank of India for stabilising the conditions in the call money market The Company's aggregate lendings in the call and notice money market were also higher at Rs 5,53,995 crore in 1995-96 as compared with Rs 5,29,183 crore in 1994-95 and consequently the daily average call money lending by the Company during the year under review was higher at Rs 1,500 crore as against Rs 1,431 crore in the preceding year In the Term Money and Commercial Bills segments of the money market the Company's tumover was moderate

In this connection, it would be pertinent to mention that during the year under review the call money rates witnessed greater volatility and ruled at significantly higher levels as compared with the rates in the previous year This is evident from the fact that Company's fortnightly weighted average call money lending rate rose from 8 68 per cent in 1994-95 to 16 99 per cent in 1995-96 and that the average rates for 22 fortnights out of 26 fortnights were higher than those of the corresponding fortnights in the previous year. As a result of this, implicit cut off yields of 91 days Treasury bills went up from 11 40 per cent to 12 97 per cent and of 364 days Treasury bills from 12 08 per cent to 13 12 per cent. The primary market yields of Central Government dated securities also moved upward The Reserve Bank of India also raised the rate of interest on the refinance and 'Repo' facilities extended by them to the Company in the later half of the year All these factors contributed to a significant rise in the cost of funding the stocks of Treasury bills and Government dated securities carried by the Company for its normal tracing operations. As a result of this, the Company's profit before depreciation and taxation during 1995-96 stood lower at Rs 56.23 crore as against Rs 82.26 crore in 1994-95. Net profit for the year also worked out lower at Rs 31 44 crore as compared with Rs 44.26 crore in the previous year. Your directors have proposed the appropriation of the net profit of Rs 31.44 crore as under-

markets purchases and sales)

The Company's performance as revealed by its turnover data needs to be viewed in the context of the conditions prevailing in the money and securities markets at the material time. During the first five months of the current year, the liquidity position of the banks improved considerably and the money market witnessed easy conditions on account of an unprecedented growth in bank deposits, substantial decline in bank credit and release of about Rs. 9.300 crore by reduction/waiver of CRR prescriptions by the Reserve Bank of India. Consequently, the borrowing requirements of the banks declined and some of the chronic borrowing banks even turned lenders in the money market. As a result of these developments. the 'Repo' turnover of the Company against Treasury bills and Government dated securities has been lower at Rs. 933 crore and Rs. 5,298 crore respectively during the first five months of the current year as against Rs. 8,154 crore and Rs. 12,006 crore in the corresponding period last year. The turnover of the Company in the Treasury bills segment on outright basis has, however, been substantially higher at Rs. 4,478 crore representing 82.76 per cent of the total Treasury bills turnover during the current year so far as against Rs. 1,245 crore or 13.25 per cent of the total turnover during the corresponding period of the previous year. The turnover in the Government dated securities segment on outright basis during the first five months of the current year has also been higher at Rs. 270 crore as against Rs. 140 crore in the corresponding period last year. The Company's performance as a Primary Dealer in the Government securities market has also been quite encouraging during the current year so far. Its success ratio at the auctions upto August 30, 1996 has been 51.56 per cent in the case of Treasury bills and 87.30 per cent in the case of Government dated securities as against the prescribed ratios of 40 per cent and 33.33 per cent respectively. The Company's total turnover ratio during the aforesaid period was 10.42 times in the case of Treasury bills and 13.85 times for Government dated securities as against the prescribed ratios of 10 times and 5 times respectively.

On account of ample liquidity in the system, the demand for funds in the call money market has also been subdued. Despite this, the aggregate lending by the Company in the call, notice and term money market has been marginally lower at Rs. 2,02,211 crore during the current year so far as against Rs. 2,13,217 crore in the corresponding period last year. The fortnightly weighted average call money lending rate of DFHI covering ten fortnights of the current year has been much lower at 9.15 per cent as against an average of 17.08 per cent for the corresponding period last year.

Due to the comfortable liquidity position, the implicit cut-off yields in respect of 91 days Treasury bills auctions fell sharply from the level of 12.97 per cent in the auctions held till April 4, 1996 to 9.99 per cent in the auction held on August 23, 1996 after touching a low of 8.48 per cent on August 9, 1996. Similarly, the implicit cut-off yield of 364 days Treasury bills also came down from a level of 13.12 per cent in the auctions held till April 10, 1996 to 12.65 per cent on July

17, 1996. However, the easy conditions had little effect on softening the yields of Government dated securities in the auctions, though the secondary market yields came down marginally.

### **Concluding Observations**

The Indian Money and Securities Markets have witnessed wide ranging reforms in recent times, particularly since 1991. The Money Market has been made vibrant with the freeing of interest rates. It has also been widened and deepened by allowing many more institutions to participate as lenders and by introduction of new instruments. In the Government securities market also far reaching reforms have been brought about. There is now a clear shift towards market related yields on primary issues. The auction system has stabilised and the Reserve Bank of India is coming out with new and varied instruments to suit the needs of various types of investors. Apart from this, healthy accounting standards are being put in place by gradually moving towards a fully marked to market system for valuation of Government securities. The Government securities market has been made more transparent and risk free by daily publication of the particulars of SGL transactions and by introduction of Delivery versus Payment system.

The most notable and outstanding reform has been introduced recently by creation of necessary institutional infrastructure in the form of Primary Dealers (PDs) for the development of an active secondary market in Government securities. So far six institutions have been accredited by Reserve Bank of India as Primary Dealers in the Government securities market and your Company has been one of the first two institutions to be accorded this status. With the operationalisation of six PDs, the turnover in the Government securities market has gone up and more reliable quotes are now available. The Reserve Bank of India is providing the required support to PDs. It has reduced the rate of interest on 'Repo' facilities to them from 12.50 per cent to 11.50 per cent against Treasury bills and from 14.00 per cent to 13.00 per cent against dated securities. Further, with a view to providing incentives to PDs for developing the secondary market in Government securities. Reserve Bank of India has also introduced with effect from July 10, 1996, a scheme of paying commission to PDs on Central Government securities purchased by them in all the floatations in the primary market including the underwriting commitments. The rates of commission per Rs. 100 are 12.50 paise, 50 paise and Rupee one for 91 days Treasury bills, 364 days Treasury bills and dated securities respectively. Obviously, the commission is being paid to enable the PDs to widen the investors base, to bring about proper alignment in the primary and secondary market yields and to meet unforeseen losses in adverse market conditions. These underlying objectives are yet to be fulfilled. Firstly, after the introduction of the system of payment of commission, some of the existing investors have started the practice of routing their bids through PDs on a commission sharing basis and the purpose of paying the commission to PDs for widening the investors base is yet to be achieved. Secondly, in my view, the rate of commission needs to be rationalised with the basic objective of integrating the primary market and secondary market yields so as to get better market responses to the primary market auctions/floatations. In other words, the quantum of commission should be so determined that it fully compensates the PDs for the difference between the secondary market and primary market yields.

To facilitate retailing of securities, particularly to the house-hold sector the question of introducing the system of satellite dealers is being actively considered.

For the development of an active second-

ary market, suggestions have been made to widen the 'Repo' market by increasing the number of participants and by allowing more securities to be made eligible for conducting 'Repos'. The number of Government dated securities eligible for 'Repo' has already been sufficiently enlarged in the recent past and further increase in the number thereof does not appear to be necessary for the present having regard to the volume of 'Repo' transactions taking place in the market. Without undermining the need for an active 'Repo' market, it may be stated that 'Repo' transactions, particularly in the Indian context, are not quite conducive to the development of an outright secondary market. So long as the 'Repo' route is open, there is a tendency amongst the investors to meet even their relatively longer term liquidity needs through this route, and to keep on postponing the outright sale of securities without analysing the cost-benefit thereof. In view of this, greater stress needs to be laid on the development of an outright market.

During the financial year 1995-96, particularly during the second half, the money market rates ruled high and witnessed greater volatility. On the other hand, during the current year, the call money rates are ruling at much lower levels since July 1996. Such prolonged spells of very high and unduly low levels of money market rates are not conducive to the healthy development of the financial system. Keeping in view this aspect, your Company was the first institution to make an attempt to develop a Term Money market by offering to borrow 60 days money from banks at fairly competitive rates. While there were several enquiries in this regard from banks, none of them came forward to place the money eventhough the rates offered by your Company were much higher than the average call money rates during the relevant period. It would take some more time for the Term Money market to develop and your Company would continue to strive in this direction. Term Money market, when developed, would also meet the need of a 'bench mark rate' for pricing of other short dated instruments and take care, to some extent, of the asset-liability mismatches of banks and financial institutions.

### **Acknowledgement**

I take this opportunity to sincerely thank the Government of India, the Government of Maharashra, the Reserve Bank of India, the commercial and co-operative banks and all-India financial institutions for their whole-hearted co-operation and support. I would like to place on record my appreciation of the painstaking efforts of the Company's dedicated team of officials for the good performance of the Company.

Notes: 1 Figures in brackets under col 3 represent growth rate in per cent over col 5 and the same in col 5 represents annual average compound growth rate

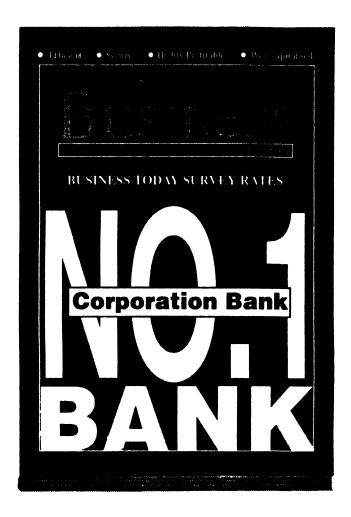

<sup>2</sup> Alphabets under col 2 mean the following: (R) means revenue account, (C) means capital account, (NP) means non-Plan, and (P) means Plan. These short-cuts are used to indicate that only one of the two heads, that is, either revenue account (R) or capital account (C) is relevant for the specified sector, similarly, either non-plan (NP) or plan (P) expenditure alone is prevalent.

## WHERE THERE'S LIFEBUOY, THERE'S HEALTH

A quality product by Hindustee Lever

Lintas Lb Pr 2 25

Just in case you missed reading the May 7-21 issue, we thought we'll bring it your notice that the Business Today Survey rates us
No.1 among all Indian Banks.

At Corporation Bank, we believe good enough is not enough and it is reflected in our performance. As a pro-active, efficient, customer-oriented organisation, we've moved up from the 1993-94 position of No.3 to the No.1 position among all Indian banks in 1994-95. Thanks to our dedicated employees and to the unflinching loyalty of millions of customers, this marks the beginning of a new journey.

## **Corporation Bank**

Performance sets us apart

#### LETTERS TO EDITOR

#### **Defining Union Work**

THE article 'Defining Union Work' (July 27) by Vrijendra ostensibly appearing as a review or analysis of a Mumbai High Court ruling in favour of Blue Star, setting aside an Industrial Court order regarding the right of N Vasudevan (our working president) to do trade union work during office hours is in effect an attempt on the part of the author to denigrate trade unions in general and independent unions in particular. We are concerned at the innuendos aimed at the Blue Star Workers Union and its officebearers We disagree with several other formulations propounded by the author.

Masquerading as a friend of labour, Vrijendra says that a significant number of unions including the established ones and their (dedicated?) leaders negotiate with employers cornering privileges and benefits for a small group of office-bearers at the cost of their members. Such undemocratic functioning of the office-bearers isolates the leadership from their members and this isolation gives a handle for the employers to attack unions. According to Vrijendra, Blue Star management would not have succeeded in taking away Vasudevan's right to do trade union work during office hours had the union not resorted to undemocratic practices. The author has not bothered to substantiate his allegations against our union. He has indulged in unalloyed calumny.

Blue Star Workers Union emphatically states that at no stage in a quarter century of its existence have its office-bearers or Vasudevan negotiated with the employers any personal privilege or benefit for any office-bearer of the union. In fact it is the office-bearers of Blue Star Workers Union who have borne the brunt of employer offensive and 65 leading union activists are now under dismissal and Vasudevan has refused to compromise his right to do trade union work and has sacrificed wages since 1989. He is facing an enquiry presently for not giving up trade union activity. Blue Star Workers Union has a long history of struggle for workers' rights inside the company and outside upholding the best working class traditions. Withdrawing Vasudevan's right to do trade union work was to weaken Blue Star workers' collective resistance to the brutal power of Blue Star capitalists and it was only a miscarriage of justice that led to Blue Star Workers Union losing the court battle. All class conscious workers have steadfastly supported the union throughout.

It is a pity that Vrijendra's erudition did not penetrate deep enough to understand the class nature of the court ruling. What is more, his inability to comprehend the legal complexities involved in the case becomes evident when he uncritically adopts the high court ruling in favour of the company.

Apart from the caption, Vrijendra's treatise has miserably failed to offer any definition for trade union work.

Blue Star Workers Union, with was 125 like-minded unions in the coa a part of a Committee for Trade over ry, is Union Rights now campaigning for a legal ght to do trade union work during office ours.

MAYE President, Blue Star Workers Uno Mumbai

II

THE article 'Defining Union Work' by Vrijendra (July 27) makes several day atable points which we do not wish to take here. However, it is necessary to make in immediate clarification. The article inplies that N Vasudevan and other independent union leaders appropriate to themseles, as "personal privileges", "benefits" when have been "negotiated and made availablet union activists". In the case of Vasudevan ad the Blue Star Workers Union, these allegations are totally untrue. No 'benefits' for union activists' were ever 'negotiated'. Vas devan and the Blue Star Workers Union imply created the right to time-off for union work by doing union work in working hours. While the union was in a strong position, the company could not stop the practice. When the balance of power shifted to management, they stopped paying Vasudevan's salary. Since 1989, he has continued to doft 1-time union work without payment from the company. It is surely unjust to refer to his willingness to endure personal hardhip in the cause of his union work as pisonal privileges' or 'benefits'

## High Cost of Sardar Sarbvar

THIS refers to my article 'Is Sardar anovar Financially Viable?' (July 20). The following further information received subsequently

in this regard, I presume, will be of interest to your readers.

In December 1995 the government of Gujarat had itself commissioned a study by external consultants for assessing the ways and means of financing the SSP. The study has revealed that "...the trend clearly indicates that SSNN's ability to raise funds through this source [bond issues guaranteed by tripartite agreement) on a sustained basis is doubtful. The credit enhancement does provide a greater safety to the investors. but the total amount is not insignificant in relation to the size of GoG finances. Hence. the degree of safety provided by the same mechanism (of tripartite agreement) cannot remain the same on a sustainable basis for regular borrowing programmes.

The study states further that "it is unlikely that the irrigation water would be priced in a manner that would reflect its true cost. The power component is relatively small, and would be used mainly for peak load requirements. Hence, SSNN is unlikely to be in a position to service its debt obligations on a stand-alone basis, with the likely pricing structure...the project is not a financially viable concept, as a stand-alone

entity...'

To have an idea of the size of the demands on the GoG if SSNN defaults, consider that the project has to return Rs 8,000 crore in 2013 AD for the Rs 256.65 crore that it had raised from the Deep Discount Bonds in 1993. The SSNN, which gets budgetary support each year to the tune of Rs 500 crore. is now required to pay Rs 270 crore as interest this year. The GoG support is also at the cost of Saurashtra and Kutch ir whose name the project is being implemented. All minor and medium irrigation projects in these areas stand abandoned since the last eight years. It is indeed a tragic situation.

## Targeting Inflation, atting Production

THE recent behaviour of inflation in the lith economy exhibits marked structuralist characteris. In the first place, sectoral price increases have shown notal ifferences, reflecting specific supply conditions. Second there have been significant fluctuations in the year-to-year lation rate which are not explainable in terms of the conformal money and income growth, thus exposing the lowness of the monetary authorities' claim of having achid a delicate balance among money, output and prices. Find whether we take the immediate period or a longer on the inflation targeting exercise of the authorities has achieve nothing; on the contrary, it has been shown to have hurtin stiment and output. Against the background of the gride all-round pessimism about a slow-down of real economic ctivity as a direct consequence of liquidity and interest rate straints, the Reserve Bank of India's claim in its recently-used Annual Report for 1995-96 that "it is possible to target thion without hurting real economic activity" is difficult to each.

hurting real economic activity" is difficult to hach.

The developments of the past few years his increasingly questioned the sustainability of the government free market policies and it is no wonder that the RBI had an forced to retrace its steps and switch, however reluctant to interventionist policies in regard to maintaining the exact rate of the rupee, fixation of coupon rates of government curities and monitoring the end-use of credit advanced banks and financial institutions. Even the much-publicity RBI-government agreement on the use of ad hoc treasury that had to be given the go-by. Developments in the economic including the trend of inflation, have driven home the needed he monetary authorities to forget inflation targeting and its instead on restoring the dynamic role of credit in the property of development, which requires attention to be paid to both esize and the distribution of credit. This has to be accepted the monetary authorities as their primary responsibility, not sing the willow-the-wisp of controlling uncontrollable Mainflation.

The RBI had proposed that the parametropic objective of monetary policy in 1994-95 would be to ing down the inflation rate sharply by 4 percentage points in about 10.8 per cent to 6-7 per cent and, with that object, to contain monetary expansion to 14-15 per cent. The greended with a much higher monetary expansion of over 17 cent (though not 22.3 per cent, the RBI's figure for 27 taights) and an inflation rate of 10.4 per cent on a point-to-per basis and 10.9 per cent on the basis of the weekly average the wholesale price index. These targeting exercises had be predicated on the assumption of GDP growth of less than er cent, which was revised to 5.5 per cent in the mid-year dit policy. The year actually ended with 6.3 per cent GDP growth of the strand yet both

the inflation and monetary targets were far exceeded. For 1995-96, again, with a projected GDP growth rate of 5.5 per cent, the inflation target was moderated to 8 per cent because the previous two years had seen large increases in money supply and the M, growth consistent with this inflation objective was placed at 15.5 per cent. Though the government and the RBI have claimed that the economy grew by 7 per cent in 1995-96, the growth is unlikely to have been higher than the 6.3 per cent achieved in the previous year, for the agriculture ministry has now revised downwards its foodgrains production estimate from 190.4 mn tonnes to 185 mn tonnes, an absolute decline of 3.2 per cent over the previous year. Likewise, due to reporting problems, the actual monetary growth in 1995-96 is not known. Conceding that its figure of a moderate monetary growth of 13.2 per cent in 1995-96 was largely on account of the high base of March 31, 1995, the RBI has claimed that actual monetary growth in the year had been equal to the longterm annual average of 17 per cent. Despite such high monetary growth and the same GDP growth as in the previous year, there occurred a sharp fall in the inflation rate from 10.4 per cent in 1994-95 to 5 per cent in 1995-96 on a point-to-point basis. Even in weekly average terms, the inflation rate fell from 10.9 per cent in 1994-95 to 7.8 per cent in 1995-96. All the major reasons to which the decline in inflation is attributable fall outside the monetary sphere. Large releases from government food stocks, lowering of customs and excise duties on a wide range of commodities, augmentation of supplies through import of consumer, intermediate and capital goods and the stability of the rupee's exchange rate for a long period have been one set of factors, though more important perhaps was the suppressing of inflation by the government by refusing to raise administered prices even at the cost of larger budgetary subsidies.

This situation could not obviously continue for long. As soon as the new UF government raised the prices of petroleum products at the beginning of July by 15 to 30 per cent, the annual inflation rate began to move up and was 6.5 per cent for the week ended September 21 compared to 4.2 per cent at the end of June. The government has just announced increases ranging from 3 to 6 per cent in procurement and support prices of kharif foodgrains and other crops. Issue prices under the public distribution system have, on the other hand, remained unchanged since February 1994. Prices of coal, power and once again petroleum are due for revision if budgetary subsidies are to be contained. A significant element of suppression of inflation is thus persisting and is responsible for the still apparently moderate overall inflation rate.

Besides, a significant aspect of the behaviour of inflation has been the persistence of relatively high increases in prices

of 'food articles' among primary articles and 'food products' among manufactures. The price index of 'food articles' has gone up by 9.1 per cent in the last one year (up to September 14), compared to 8.7 per cent in the preceding 12-month period. Similarly, the index for 'food products' has risen by 7.9 per cent against a rise of only 2.8 per cent in the previous 12-month period. As a result, the composite index for food items has shown a rise of 8.8 per cent in the latest period against 6.7 per cent earlier. The sharper rise in prices of food items, which is continuing, is reflected in the persistence of the near two-digit rise in the consumer price indices. The CPI for industrial workers for July showed an annual increase of 8.3 per cent on top of a rise of 11.4 per cent in the preceding 12-month period.

The emerging sluggishness in industrial investment and production is also exerting a dampening influence on inflation. The price index for manufactured products other than 'food products' thus shows a strikingly small increase of 3.4 per cent over the past year against an increase of 11.6 per cent in the preceding 12-month period. The latest data on industrial output, bank credit and exports point unambiguously to a slowing down of economic activity brought on by the ridiculously high levels of real interest rates—the one achievement the much-vaunted financial sector reforms can take credit for.

So much then for the Reserve Bank's claim that "it is possible to target inflation without hurting real activity".

HEALTH

#### Need for New 'Wisdom'

CONVENTIONAL wisdom among health analysts and historians of social medicine is that a country with a developing economy, a good agricultural base and a vibrant growing industrial and manufacturing sector will essay a transformation in its health picture. There will be a snift away from what were referred to (and still are in some quarters) as 'tropical diseases' to an increase in degenerative diseases. This is not only because the population grows older, the assumption is that diseases which are 'preventable' have been prevented, diseases for which there is a medicure are under control and there is sufficient 'health consciousness' to ensure that no ugly pathogens are allowed to get out of hand.

If the government's periodic Economic Surveys and the glorious statements of the finance, agriculture and industry ministers are to be believed. India is at just such a point in its development history when we should be concentrating our resources entirely on dealing with degenerative diseases, diseases of 'leisure', with accidents and addiction, etc. In fact, if one were to look only at the

pattern of growth of our health institutions this indeed would seem to be the superspecialist hospitals for heart dis for cardiovascular ailments, sophistical accident and trauma clinics are a proment feature of the new growth. And you he regularity with which 'resurgence' of deses is being reported tells another story Diauc fever and malaria have both ma a 'comeback' which has been quite unexpeded and have thrown the medical symm completely out of gear. Viral disease ke influenza are taking a toll of lives in age enough numbers. The Kyasanur test disease has today spread far beyond the confines of the forest after which it has en named. And tuberculosis, the old, old disease, is nowhere near under control. It is a thy surprising that the WHO's regional root for South and East Asia concludes the the goal of 'health for all' is nowhere nearling achieved.

That this ill health picture is larely confined to the poorer sections of the population is of course true. And the explanation is obvious – the public health system, which is the only provider of health care to the poor is rapidly deteriorating and populations already devastated by he ger and despair are further conftonted with diseases which they cannot cope with

But the situation in Kerala is not only intriguing but should give cause for sime serious enquiry. Towards the end of the monsoons, cholera was reported in not em Kerala, a region not particularly underserviced or poor compared to the rest of his 'developed' state. Worse, there were many deaths due to this old adversary of India's public health system. That cholera should have taken a near-epidemic form in a ate with the best health indices is itself disturbing, but that there should have been deaths in a state with high literacy and health awardess and an accessible and affordable health are system should prompt some cogitation. Given that Kerala is already giving thought to the post-health-transition diseases, it prompts the question whether developing countries should be preparing themselves for a vally different scenario from the one conventional wisdom has elaborated: that of continuing spread of communicable diseases in yeurore devastating forms, plus the degenerative diseases in populations which are nowhere near a general health status level where they can cope with these.

#### **Layers of Guilt**

A DELHI additional sessions judge has convicted some 80-odd criminals and passed the death sentence on one accused for their involvement in the 1984 massacre of Sikhs

in the capital. But even this belated justice may not be carried out expeditiously, judging by the time-consuming and tortuous process that marks the functioning of the hierarchical judicial system in our country.

Since the sentences were passed by an additional sessions judge in the lower echelon of the judicial hierarchy, the convicted persons have now approached the Delhi High Court with petitions seeking reversal of the judgment. The Delhi High Court has accepted their petitions and issued notices to the state on the petitions returnable on October 8. For all practical purposes, therefore, their conviction will remain shelved till that date and will continue to be held in abeyance till a judgment is arrived at. The matter will not end there. Even after the Delhi High Court delivers a judgment, the aggrieved petitioners (if the court upholds the judgment of the additional sessions judge) may go to the Supreme Court seeking the setting aside of the judgment. Thus they can evade punishment for a long while more. In fact, quite a few among these accused of the killings in 1984 are reported to have died by now

The very fact that these convicted petitioners can afford to appoint lawyers and continue with expensive legal battles suggests that they are not small-time criminals or riffraff, but enjoy the support of powerful politicians who were alleged to have hired them for the killings. Justice S N Dhingra, who sentenced the accused, pointed his finger at these powers behind them when he said, "the above accused persons have been convicted but those who engineered the riots are still at large".

The conviction of the 80-odd accused is thus a selective judgment. The brains behind the massacre (among whom are alleged to be such leading Congress politicians as H K L Bhagat and Sajjan Kumar, who have been indicted repeatedly by commissions of inquiry) have managed to escape even token conviction. Although charges have been framed against Bhagat and Sajjan Kumar, they are yet to be convicted. While these Congress politicians are believed to have been directly involved in the killings - as alleged by victims who saw them leading the mobs - there were other more important Congressmen at the helm of power who let the mobs go on a killing rampage for two to three days.

Among them Narasimha Rao needs to be indicted first, since as union home minister at that time he just refused to use his authority to order the police to stop the riots. It was this same deliberate refusal to act against the zealots of the 'Sangh-parivar' who demolished the Babri masjid and went on a killing spree against Muslims in 1992 that makes Narasimha Rao the arch villain again. But neither in the case of the 1984 massacre

of Sikhs nor in the 1992 case of anti-Muslim riots is Rao likely to be ever hauled up before the courts.

It is only after 12 years that at least some of those accused of the 1984 killings are being punished now. How many more years will it take to bring to trial the killers of Muslims in the 1992 riots?

THE ECONOMY

## Why Are Interest Rates High?

THE Reserve Bank of India's Annual Report for 1995-96 has at least one innovation to its credit. It has for the first time attempted an estimate of the consequences of its intervention in the foreign exchange market on the availability of liquidity in the system. This has become necessary because the shift to a liberalised exchange rate and capital flow regime has rendered the rupee susceptible to volatile fluctuations. Since a stable exchange rate is crucial for sustained 'investor confidence', intervention in the foreign exchange market has become a crucial function of the central bank.

During 1995-96, for example, a widening trade and current account deficit and a slow down in net portfolio inflows resulted in some downward pressure on the rupec. The nominal value of the currency initially fell to Rs 35.65 per US dollar in October 1995 and, as the strain persisted, the rupee touched a record low of Rs 37.95 to the dollar in February 1996. This forced the RBI to intervene in foreign exchange markets, sell dollars from its reserves, stabilise the rupee and pre-empt any collapse in investor confidence. As a result the net foreign exchange assets of the central bank declined. Since this involves a reduction in reserve money on the basis of which money supply expansion occurs, pressure on the rupee results in a squeeze in liquidity available to the system. In response, many observers attributed the 'tight money' situation and the high interest rates in 1995-96 to a slow-down in portfolio flows.

The RBI's Annual Report begs to differ. Evidence garnered by it does indicate that the cumulative net sales of foreign exchange between October 1995 and February 1996 amounted to Rs 5,995 crore, which provides an estimate of the impact of foreign exchange intervention on reserve money. However, starting March the central bank actually began purchasing dollars because of a turnaround in foreign institutional investor investments in the last quarter of the financial year. As a result, by June 1996, cumulative net sales of foreign exchange by the RBI turned negative, i e, the central bank had made a net purchase of foreign exchange to the

tuncars 1,401 crore between October 199 June 1996.

Tabl report treats the figure of net sale chases of foreign exchange by the centank not just as being an equivalent reserve money, whose impact on the bility of liquidity depends on some 'musier', but as indicative of the cun ve 'liquidity impact of RBI foreign excinitervention'. It then compares the loss in reserves consequent to central ban ervention in the foreign exchange magivith the liquidity injected into the systemrough a reduction in cash reserve requirents or the cash reserve ratio. Since CRaduction amounts to a 'release of pring liquidity', in the case of which most expansion once again depends on the plier, the comparison is justified.

such a comparison reveals is that "thou and liquidity impact of foreign exore transactions and CRR reduction dur the nine-month period between Occ. 1995 and June 1996 was an injection of litty of the order of Rs 14,126 crore". Aspained, this is in essence the increase in a reserve base which, assuming a matter of 3 and some reasonable lag, with have put liquidity amounting to Rs. 18 crore into the system. Since this such that there was no real monetary streety, the question arises as to why interacts in the economy ruled as high as that, with real interest rates at double-diabels.

Bl's answer is that the large fiscal de the government's budget tightened firmal markets and pushed up interest rar owever, this explanation is patently untractory, because even though the perance of a high fiscal deficit has been anied by some moderation in the itional deficit' (actually it was higher -96 than in 1994-95) or that financed vernment borrowing from the central ballrough the issue of ad hoc Treasury Bathere has been in fact a substantial in the monetised deficit of the ment. This is because a substantial of government securities put out at t-related' interest rates were not picked the financial markets so that they ed on the RBI which underwrites such As a result net RBI credit to the government or the monetised deficit 5-96 amounted to Rs 19,855 crore or ir 43 per cent of the central government's cal deficit of Rs 46,550 crore. Since pnetised deficit also contributes to an se in reserve money and money supply, cal deficit actually contributed to an ise in liquidity rather than to a tight w market and high interest rates.

as, any discussion of high interest rates a accommodate for the fact that in quate money supply expansion or even an 'excess demand' for credit cannot be the explanation. A satisfactory explanation must turn to the obvious links between the current high interest rate regime and liberalisation. First, given the crucial role of capital flows in forms varying from NRI deposits to portfolio equity inflows in sustaining the liberal import regime, interest rates and other financial returns linked to them have to be set high enough to attract such flows. Second, to ensure such high interest rates trade liberalisation has been accompanied by a 'stabilisation' policy which prevents the government from borrowing from the central bank at low interest rates through ad hoc Treasury Bills and forces it to borrow at 'market-related' rates even when it borrows from the central bank. Fiscal reform raises the 'official' floor to interest rates through policy. Finally, banking deregulation which sought to restore the attractiveness of bank deposits relative to other financial assets by liberalising interest rates, also sought to ensure that banks are able to maintain an adequate spread between interest paid on deposits and earned on lending by allowing them to diversify their activities into a range of areas, in particular personal finance. As a result, not only did interest rates on deposits rise significantly, but the portfolio of bank lending changed substantially. Personal financing, in particular high interest consumer loans, has come to account for a rising share of bank credit, pushing up interest rates overall. Factors such as these are missed in the RBI's analysis, which despite arguments to the contrary pins high interest rates on the government's fiscal deficit.

#### **MILITARY SPENDING**

#### Elusive 'Peace Dividend'

MILITARY spending worldwide dropped to a low of 2.4 per cent of world GDP in 1995 from 3.6 per cent in 1990, according to a study by IMF staff, based on data for 130member countries of the organisation and reported in a recent issue of IMF Survey. In nominal terms, the reduction in military spending during the period is estimated to have been of the order of \$ 120.7 bn. A stuly of worldwide military spending during the preceding five years, 1985-90, also indicated a decline. The decline then was of the order of 1.3 percentage points of GPD, ie, slightly higher than the decline by 1.2 percentage points during 1990-95. Aggregating the two five-year periods, military spending worldwide fell by almost three percentage points of GDP in the decade ending with 1995. Looked at differently, military spending as a percentage of GDP declined to less than half of what it was at the beginning of the last decade. There can thus be no doubt that the decade witnessed a "dramatic reduction in military spending".

Two questions arise: One, where did this reduction in military spending occur or who contributed to this decline in worldwide military spending and, two, how was the resultant saving or 'peace dividend' used?

The maximum reduction in military spending as a percentage of GDP occurred in the former USSR. Military expenditure in the so-called transition economics in 1995 was lower in absolute terms by \$ 125 bn than in 1990, with the countries of the former Soviet Union accounting for \$ 120.6 bn of the decline. While the military spending of the industrial countries declined during the five-year period by \$ 14.2 bn, that of the Asian developing countries including not only China but also the Indian subcontinent countries, increased by \$15.3 bn and that of the developing countries of West Asia and Europe, the group with still the highest level of military spending as a proportion of GDP, increased by \$ 6.4 bn.

As for the use of the so-called peace dividend, the aforementioned study rather interestingly observes that "countries that have made sharp cuts in military spending have also tended to reduce their non-military spending and their overall fiscal deficits while at the same time boosting social spending", suggesting thereby that "the peace dividend may have been used in part to finance social expenditures and in part returned to the private sector, potentially boosting private investment".

It is not clearly indicated what portion of the savings resulting from the reduction in military spending was used "to boost" social spending and in what proportion of the 90 countries that were found to have reduced their military spending in nominal terms. Also, the study fails to indicate whether or not the part of the saving that "returned to the private sector" actually translated itself in increased private investment. Nor is it indicated if such increased private investment was sufficient to compensate for the decline in public investment during the period in consequence of the relentless pursuit of IMFdecreed reduction in fiscal deficit. So the question that remains unanswered is whether the peace dividend promoted economic growth at all.

#### **PAKISTAN**

#### On the Boil

IT would not be far from the truth to say that a decade ago the sort of situation which today prevails in Pakistan would inevitably have led to the dissolution of the government and the military stepping in through one doorway or another. If there is a silver lining in the gloomy portents in that country today, it is that the last decade has seen a strengthening of democratic institutions such that forces inimical to them can be kept at bay. However, in the context of the current social turmoil and an economy rapidly careening towards the sort of dependency situation that perhaps was never there before, the question is for how long. The president's recent assurance to the opposition leader, Nawaz Sharif, during an unprecedented three-hour meeting, that the president has the discretionary powers under the constitution to dissolve parliament and constitute an interim caretaker government to conduct fresh elections "if the supreme national interest so demanded" is proof of two things: one, that democratic procedures and institutions have found their feet and must be given their due and, second, that the president is not averse to using his 'discretionary' and extraordinary powers under the controversial Eighth Amendment of Zia ul Haq, much condemned then by the two parties now in opposition and the ruling Pakistan People's Party, but never repealed.

It does not need a crystal-gazer to see what is in store on Pakistan's economic front. The rupee has been devalued 30 per cent since Benazir Bhutto assumed power, ostensibly to "boost exports, restrict imports and improve trade imbalance". And yet no comprehensive measures are being taken to stall the severe recession in manufacturing industry because of the high cost of production which in turn is pricing Pakistan's traditional exports out of world markets according to reports, 25 per cent of the important textiles sector and more than onehalf the engineering industry is at a standstill. This down-spiral is aided by galloping defence expenditure which the Bhutto government has found difficult to curtail because it has to keep the military quiescent. And while inducting her husband, once jailed on corruption charges, as minister for investment may have legitimised Zardari's involvement in state affairs, it has not silenced demands for an inquiry commission to investigate corruption in high places. In fact, the president has made a veiled reference to the public allegations about Zardari purchasing a 355-acre estate in Surrey. Moreover, the creation of a new ministry and its somewhat ambiguous description, it has been suggested during discussions in the National Assembly, may simply be a means of fattening personal pockets at the expense of further inflating state expenditure and stoking inflationary pressures.

On the political front, the opposition groups have recently launched the Save Pakistan Movement ('Pakistan Bachao Tehreek')

which has been having a series of successful public rallies. And although the movement comprises unlikely partners, such as the Jamaat i Islami, the Pakistan Muslim League(N) and the MOM(A) and may well have too short a life to make an impact, it still represents the emerging forces against Bhutto's patent mismanagement of the country's affairs. The fact that human rights and labour groups and fringe political formations have also raised their voice against it cannot be ignored, particularly because sections of these forces had in the past rallied around Benazir. This fact also shows that these 'progressive' forces are well aware that neither the army nor the Islamic forces are seen as being in a position to take charge of the country's affairs, or even wanting to do so, at the present juncture, which is why Benazir is no longer the lesser of the evils

Despite the fact that the army has been in Sindh now for over two years, the situation is not far from boiling over at any moment. While there is some calm – there have been highly optimistic and hopeful reports of Sindhi Hindus returning to Pakistan – Sindh is a scene of continuing tension. And the situation there has to be viewed as much in terms of the turmoil of decadent feudal forms as of ethnic violence. Without an emergent new economic structure, the conflicts are turning increasingly inwards.

It is against this background that the killing of Murtaza Bhutto should be viewed. He did not and never did represent any substantial threat to Benazir's political ambitions - but did, however, become a site for the crystallisation of feudal power struggles. As of now Benazir is unlikely to succeed in making political capital of it. The usual charges have been made of Murtaza supporters having been trained by RAW, while Murtaza loyalists have accused Zardari of conspiring to kill him. On the other hand, the president appears to have opted to pose challenges to the government during Benazir's period of mourning, by filing a reference to the Supreme Court on whether the president is bound by the prime minister's advice on the appointment of judges. Commentators point out that president Leghari could well have waited to seek the apex court's interpretation of article 48(1) of the constitution which has been a bone of contention between him and the prime minister for some time. In a sense Pakistan's problems are not unique but of a piece with the turmoil under way in the whole subcontinent. If it is taking a particular turn there, it is because of the specifics of the country which has as yet failed to produce a substantial middle class (as in Bangladesh) and/or a working class consolidation at any point in its history.

There has occurred a sharp downward revision of total foodgroup utput for 1995 96 by 5 mn tonnes to 185 mn tonnes implying a 3 2 per cent fall over 1994 95 Downward revisions are observed in kharif and rabi output or the rice and wheat. This is reflected in reduced public procurement, partly due to this and partly due to about 5 mn tonnes of exports, there has occurred a 10 mn to iduction in food stocks with public agencies over the past one year. The growth of infrastructure industries has slowed down this year. The number of persons a live registers of employment exchanges has edged up during 1995 96 from 36 6 mn to 36 8 mn likewise the number of placements moved up from 212 thousand, that is 3 6 per cent and 3 7 per cent of registrations in the respective years.

**INDAL** 

#### **New Projects**

INDAL, the country's largest manufacturer of semi-fabricated aluminium, closed the year ended March 1996 with a sales turnover of Rs 1,053 crore, up by 17 per cent. Other income was up by Rs 11 crore. Interest costs moved up by 13 per cent. Provision for depreciation was up by 11 per cent. Tax provision moved up from Rs 2 crore to Rs 35 crore. Indal ended the year with a net profit of Rs 114 crore, up by 24 per cent. The company has declared a total dividend of 40 per cent for the year.

Exports rose by 19 per cent, to Rs 199 crore. South Africa and Vietnam were the new export markets acquired by the company.

A diversified company, Indal is into manufacturing sheets (including foil, extrusion, metal and carbon), chemicals and electronics. The sheets division contributed 50 per cent to the total turnover of the company with chemicals and foil and packaging contributing 18 per cent and 13 per cent, respectively.

Indal's smelters at Hirakud (Orissa), Alupuram(Kerala) and Belgaum (Karnataka) produce metal to meet the company's own requirement.

The company has entered into a joint venture agreement with Norsk Hydro of Norway, one of the world's largest players in the extrusions market, to manufacture and market aluminium extrusions and related systems in India. The new company is to be called Hydro Aluminium Extrusion where Indal would hold a 49.5 per cent stake, with the rest being held by Hydro Aluminium Extrusion, a division of Norsk Hydro. The total share capital of the new company would be Rs 25 crore. The company will manufacture aluminium extrusions mainly for the construction industry and also develop the market for such products by adapting designs for the Indian market.

The company is planning to set up a third aluminium toils plant. It has short-listed three sites, namely, Pondicherry, Hyderabad and Maharashtra. The company's two plants at Kalwa and Hyderabad produce pharmaceutical toil, household foil, cable wrap, foil board laminates and condenser foil.

Indal has also undertaken a feasibility study for a new business, viz, kaolin processing. Kaolin has worldwide application in the ceramic industry for the production of sanitaryware, tableware and tiles.

The company's 25,000 tpa aluminium scrap recycling facility at Taloja is expected to augment its captive metal base. Indal is

plans to set up a 100 mw naphtha based con ed cycle power plant in Belgaum in Karka

expansion of alumina capacity by 201 tonnes per annum and standard alumifrom 22,000 to 26,000 tonnes per annual Belgaum is nearing completion. The all alumina project has made progress.

BISTAR

#### Fay into New Areas

Bluar has a range of diversified activities in field of air-conditioning and regation, industrial process control, eldics, medical equipment and software. Majan 50 per cent of the turnover comes free AC and R division.

company closed the financial year entharch 1996 with net sales of Rs 373 crop by 25 per cent from Rs 297 crore acid in the previous year. Other income initial by 158 per cent. Interest cost came due by 22 per cent. Provision for detailing and tax rose by 31 per cent and 80 cent, respectively. Net profit moved up 54 per cent from Rs 16 crore to Rs 21 ce for the year under review. Dividend patt has been maintained at 35 per cent.

AC and R division recorded a growth other cent in new order bookings and stithened its leadership in the central airconing and packaged air-conditioner ms. In keeping with the demands of the Mail Protocol which calls for a halt to thinufacture of chlorofluorocarbons in deping countries by end 2005, a major meent is being made by the company feitch overto ozone-triendly refrigerants when help of a grant by the multilateral fing agency set up under the aegis of the Neal Protocol.

Star has a 45 per cent market share thral air-conditioning. It also operates areas of software and commercial ment. In air-conditioning it plans to foray into the window air-conditioning ant. The company has entered into a fical collaboration for product anufacturing technology for air ioners with Rheem Manufacturing any, USA.

company is considering entering n markets for air-conditioning projects. a presence in Malaysia, through its venture, Arab Malaysian Blue Star, the any plans to bid for projects in Europe, ica and Africa together with businessers in those areas. In Asian countries, Star plans to do the bidding alone, ring the year under review the company hed a joint venture named Stork

Comprimo Blue Star which is aggressively bidding for contracts in the petroleum, petrochemicals co-generation sector. Stork Comprimo is a world leader in sulphur recovery technology.

The company's AC and R division has ventured into industries like floriculture, aquaculture and mushroom farming. With large investments flowing into the fields of floriculture, horticulture and aquaculture, the demand for specialised refrigeration equipment will be on the rise.

SPIC

#### Rise in Turnover

A joint venture with the Tanul Nadu Industrial Development Corporation, Southern Petrochemical Industries Corporation (SPIC) is a Madras-based group. Though fertilisers is its mainstay, it has diversified interests in petrochemicals, infrastructure, electronics, pharmaceuticals, telecommunications and power.

The company closed the financial year ended March 1996 with a turnover of Rs. 1,782 crore, up by 45 per cent from Rs. 1,242 crore in the previous year. Interest costs rose by 47 per cent. Provision for depreciation increased by 59 per cent. The company paid zero tax, like in the previous year. Net profit moved up by 20 per cent from Rs. 68 crore to Rs. 81 crore. A dividend of 30 per cent on equity and of 12.5 per cent on preference capital has been recommended by the board of directors.

The fertiliser division accounted for about 70 per cent of the turnover. Total fertiliser sales touched a high of 2.5 mn tonnes. The shipping division earned Rs 38 crore in foreign exchange for the year under review. The company's vessels have mainly been used for ensuring continuous supply of imported raw material for the SPIC fertiliser complex. The division also chartered vessels. Spic's foray into LPG was made with the launch of SPIC Jothi.

The heavy chemicals division manufacturing caustic soda and chlorine achieved 100 per cent capacity utilisation. Modernisation of the plant to convert it to the technologically better 'membrane process' is in progress. The SMO division, the company's engineering unit, bagged a Rs 22 crore turnkey order from the ONGC. SMO would also bid for an electrification project in Syria, whose value is of the order of Rs 200 crore. Full capacity utilisation was achieved by the pharmaceutical division during the year under review. The company also commissioned its 1000 mu penicillin plant.

SPIC Pharma, the drugs and pharmaceuticals division, has plans to invest about Rs 300 crore in its core areas of fermentation products, synthetic drugs and herbal products in the next two to three years. The company has identified cephalosporins as the next antibacterial to be manufactured. The company commissioned a world sized plant for Penicillin G in June 1995 at Cuddalore in South Arcot, with an initial investment of Rs 180 crore and technology from CIPAN, Portugal. The division has been experimenting with a few other antibacterials that could be viable for commercial production along with working on a number of synthetic bulk drugs which were in various stages of development. The division aimed to develop products with an ayurvedic base. More than half of the outlay of Rs 300 crore would be invested in the antibacterial segment, as the manufacture and production of fermentation (antibiotics) drugs was capital intensive. The remaining amount would go to synthetic drugs and herbal products. Plans are on to take over Amrutanjan, a household name among over the counter drugs. In this the company faces competition from Reckitt and Coleman and Procter and Gamble.

The company is setting up a Rs 16.5 crore fertiliser plant in UAE and has established a wholly owned subsidiary, SPIC Fertiliser Company, to manufacture 1,200 tonne a day of urea and its raw material ammonia in UAE's Jebel Ali Free Trade Zone. To save on costs the company has dismantled a second-hand ammonia and urea complex which it bought from Sri Lanka and has relocated it in the UAE. Prompted by a feedstock shortage the plant to be originally located in Rajasthan is to be set up in UAE. To fund the project the company in addition to a GDR issue plans to raise around Rs 10 crore through a consortium of banks in Europe and the US. The ammonia project at Dubai would go on stream in 18 months from June 1996. It would be a naphtha-cum-gas based unit though initially it would be based only on naphtha. Both the joint venture projects are highly capital intensive and subject to implementation delays and can be expected to contribute to the margins only after a period of two to three years.

The group's tissue culture production facility at Coimbatore has the technology to produce 140 varieties of ornamental plants, fruit crops, plantation crops and forest trees. SPIC has an ambitious project for its agri business division. The project involves setting up of agro-service centres to interact with farmers' clubs and sell inputs like improved seeds, and fertiliser to farmers through these clubs. The company has plans to do business up to Rs 200 crore a year.

## **Interest Rates Refused Behave**

The RBI's efforts, including the pumping of a large amount of liquidity through the foreign exchange met and release of banks' cash reserves, to bring down interest rates are ping ineffective, with damaging consequences for both the real and the fircial sectors of the economy.

## Financial System in a Maze

THE financial system is now caught in a labyrinthian maze. Though the Reserve Bank of India (RBI) has flogged the system with large releases of liquidity, the system itself has failed to respond and help the authorities in achieving a genuine downward shift in those elements of the interest rate structure which matter to the productive sectors. The rub lies in the authorities' persistent dependence on indirect instruments of monetary control rather than reimposing direct interest rate regulations which the situation demands. The free market policies have let loose unbridled competition among banks, financial institutions (FIs) and non-banking financial companies (NBFCs) to mobilise scarce financial assets of the community, which has spawned the most glaring mismatch between the yields offered on such assets and the rates of interest that are economical to the productive borrowers.

The freedom given to banks to fix domestic deposit rates for over one-year maturity combined with the reduction of the minimum period for term deposits and certificates of deposits (CDs) from 45 days to 30 days, the similar freedom offered to the registered and credit-rated NBFCs, and the persistence of bond issues by FIs at high rates of interest, have stimulated this competition, thus pushing up the average cost of funds for banks and Fls. Term deposits are ruling at 12.5 per cent to 14 per cent for above one year against 12 per cent a year ago and bond issues of public financial institutions by IDBI, IFCI and SCICI at coupon rates of 16 per cent or over had fuelled interest rate expectations. These have been further stirred up by the announcement of Reliance Capital to offer 20 per cent on five-year deposits following the deregulation by the RBI of NBFCs' deposit rates. This should come as no surprise as

alresome of the NBFCs have been offeringlictive yields of 20 per cent or above thrill various commissions and incentives. Withe NBFCs deploy such funds to ge a return of 24 to 28 per cent in finding car and other consumer goods es and generally supplying funds to publies and generally supplying tunds to indies and activities which are not financed by tanking industry, the banks themselves hadfused to reduce the general lending rate hich are, for a majority of the cases. stimeged at 20 per cent or above. With theing average cost of funds, the banks hadished up their prime lending rates (Piesteadily from 14 per cent in October 19 16.5 per cent by November 1995. The, following moral suasion from authies and borrower pressure, banks ef a 0.5 percentage point reduction in Pla 16 per cent, the spread over the PLR hamained high. In addition, the FIs again breed their implicit agreement to restrict there end of their lending rate structure west percentage points of their PLR at at and 22 per cent. In the most recent armitinued pressure from the RBI, the Stank of India (SBI) took the lead in refig the PLR to 15.5 per cent and Bank of odd and Corporation Bank have d its lead. The vast number of banks arks, however, have expressed their in to lower their PLR if their margin will be protected. This has happened denthe fact that call money rates and rates on short-term instruments as CDs have o more moderate levels. The whole pathenon reflects the market expectations of the and sticky interest rates in the man term.

a high interest rate structure has taken its toll of both real and financial First, the industrial and output ages have already begun to suffer. . First, the industrial and output

Second, the duality in terms of the top-rated companies getting their funds at low rates and the middle level, small and village industries having to cough up large interest payments has got further accentuated. Third, the high rates of interest have eroded the bottomline of many companies. As an indicator, CRISIL has downgraded 52 companies' offerings while 60 more are expected to be downgraded in this year. A major reason has been the mounting debt burden raised at exorbitant rates and the corporates' inability to service the debt payments. Fourth, the persistence of high interest rates and the consequential reports of relatively poor corporate performance, have tended to depress both the primary and secondary capital market segments. Finally, the banks and FIs are hard put to protect their own bottomline despite charging unusually high rates of interest on their lendings. Apart from the poor growth of lending business and the narrowing of the spread, banks in particular have suffered from depreciation of their investment portfolio following piercing of their yield rates far beyond the coupon rates and are therefore made to set aside larger provisions.

Curiously such stickiness in the interest rates relevant to productive borrowings is observed when the banks are flush with funds essentially as a result of the cumulative release of as much as Rs 14,126 crore between October 1995 and June 1996 by the RBI through its foreign exchange market intervention and release of cash reserve ratios. The depressed conditions in the capital market combined with high rates of interest offered on short-term deposits by banks may have helped the banks' deposit accruals. As a result, banks' aggregate deposits have expanded by Rs 16,793 crore (3.8 per cent) between March 31 and August 30, 1996 in contrast to an absolute fall of Rs 181 crore during the corresponding period of the previous year but at the same time, non-food bank credit fell by as much as Rs 5,537 crore 2.3 per cent as against a fall of Rs 400 crore during the comparable period last year. In this respect, the seasonal factors apart; there appears to be a stalemate in the system of bank credit delivery. A combination of banks' general reluctance to lend, slow down in industrial activity and the exorbitant loan rates has curbed non-food credit growth. Therefore, it does not appear surprising that

banks should expand their investments in government and other approved securities by 11-158 crore this year so fai (between March 29 and August 30) against an additional investment of only Rs 6,544 crore during the comparable period last year and reduce their borrowings from RBI to such a low level as Rs 1-492 crore a fall of Rs 3-355 crore since March 29

#### GOVERN 11 NE BORROWING

Such an abundance of short-term liquidity become fortuitous for the government to complete up to end September about Rs 16 248 crore out of its net market borrow the programme of Rs 25 498 crore (Rs 1) 688 crore though conventional and other medium, and long term borrowings and Rs 2 560 crore of 364 day FBs), though the yield rates offered have shown only frictional declines not commensurate with the liquidity easiness. About 64 per cent of the year's market borrowings have already been effected. Another remarkable achieve ment on the fiscal side has been the dramatic improvement in the use of ad hoc IBs by the government which tell from the peak of Rs 22 095 cross as of July 5 to below the within the year limit to Rs 6 855 crore as on August 16 and finally to as low a figure as Rs 2 775 crore as on August 30 Such borrowings co drop in August each year on a count of the inflow of government revenues is also the RBI profits which are credited to the government around this time after closing of the central bank accounts. For the past three years the RBI has also been transferring the exchange loss reserves fund accumulated by it to meet the liabilities on account of the I CNR(A) scheme It may be recalled that the exchange loss liabilities on this scheme was being borne by he RBI. With the decision

to close the scheme in 1994, the ris vas taken over by the government. The R has been transferring the exchange risk to the government each year in proport to the liabilities falling due each year. Exciso the last election year had seen the use ad hoc levels going beyond Rs 10 000 pic even around this time.

## EMERGENCE OF BONDS MARKET IMPLICATION CORPORATE GOVERNANCE

While the government found it en to raise funds from the market because the banks avowed preferences for government paper the corporate sector has been ting a resource crunch both because of exortant rates of interest and the banks. lukomm attitude towards lending. Also as the d market showed no sign of revivacorporate sector decided to shift its atte to the debt market for its requirement of funds. Several prime companies were en to be tapping the debt market through bus thus directly competing with the fint institutions and public sector undertail According to one estimate, a total amou Rs 11 600 crore was raised by top final nstitutions and corporates during the st half of this year and it is expected that they would mop up another Rs 10 000 crore or more during the second half

As explained in a subsequent paragraph the emergence of the bonds market has raised a number of issues concerning their regulation transparency and information system depository and other facilities for secondary market trading and the extent of repo facility to be permitted so as to confer liquidity for the bonds. A wider issue arising from the emergence of bonds as an important source of funds for manufacturing companies which has not been generally raised relates to its implications for corporate governance This system will imply neither the model adopted by North America where the capital market dominates in supply of funds and the expectations of shareholders tend to occupy an important position in corporate governance, not the German and Japanese model wherein the banks and financial institutions supply the bulk of investible funds and thus exercise significant influence over corporate managements. With bonds having neither voting rights nor institutional influence they will have little control over how the corporates are managed except from the indirect

influence based on the nature of credit-rating status conferred on borrowing companies. In this regard, it would be interesting to study as to what has motivated the FICCI to propose the introduction of as many as 21 new financial instruments - all in the debt and derivative categories - such as zero coupon bonds. floating rate notes, industrial revenue bonds, clip and strip bonds, dual convertible bonds, commodity bonds, notes with warrant for debt, indexed floating rate notes, bought out deal, factoring services, forfeiting, book building, forward contract, swaps, financial futures and caps. Apparently, the finance minister has gone on record to promise that by the end of this year the Companies Act would be amended to facilitate the introduction of such instruments.

#### OTHER DEVELOPMENTS

In another development, the RBI backtracked on the scheme of commission to the primary dealers as it was vitiating the yield curve and also because the value of commission was going beyond all reasonable calculations. The commission paid on 91-day T-bills was reduced by 50 per cent from 25 paise per Rs 100 to 12.5 paise, effective August 23. This was mainly because banks were routing their requirements through the PDs merely to share the commission. The SGL transactions of August 24 did not report any trade in this paper indicating that no trade was routed through PDs. Two other measures introduced by the RBI recently with bearing on the money market are: first, banks are free to invest in the CDs issued by other banks and financial institutions in the secondary market; and second, banks are banned from buying public sector bonds in the secondary market. The latter may affect investment for want of an exit route but it may also induce some banks anxious to hold PSU bonds to in the primary stage itself.

## Overnight Money and Foreign Exchange Markets

overnight call money rates have gently ruled at the unrealistically low levels of per cent since the one percent CRR cualuly I - a situation which has persisted formst part of August except for some sherm trigger points giving rise to the ratialing in the range of 8 to 10 per cent. aling in the range of 8 to 10 per cent. Trast trigger was provided by one holiday ambe day's strike call given by a trade uniforoup (NCBE) which dominates large basike State Bank of India and Bank of Ba in the reporting week ending August 10 lenders also took advantage of the comion created by a report in a leading findial daily which quoted the RBI Gamor as saying that the interest rates w likely to remain high in the remaining pat the financial year. A closer reading of interview, however, clarified that the Carnor was actually referring to the rates ine call market, which according to him, haden unusually low and were, therefore, exped to rise a little to come to realistic les. The sentiments were further affected befact that the strike call given by NCBE feet reporting Friday which followed the imindence day holiday, thus effectively being forward the reporting Friday by two fullys. Taking advantage of the market schent, nevertheless, the lenders rigged un rates which jumped from 3 per cent u August 10 to a range of 6.50 to 9.00 pant on August 12. Although unable to be the psychological barrier of 11 per cefinance rate, the rates then remained im range of 7.50-10.50 per cent for the ref the month, coming down to the chinary half to one per cent range only

on or around reporting Fridays. The period coincided with outgoes on account of state loans (Rs 2,526 crore) and also the government of India loans (Rs 2,174 crore), which consisted of the third tranche of the partly-paid security issued in June (Rs 1,250 crore) and the latest issue. Overall, the weekly weighted averages of call rates were higher in August than in July but remained below the two-digit levels in both the months unlike for a long period earlier. Also, the weekly movements of coefficients of variations (in percentages), turned out to be wider in August than in the preceding three-months period (Tables 1 and 2; see also Graph A).

#### Forex Market

The month witnessed a see-saw movement in the value of the rupee, though overall it remained weak against the dollar during the large part of the month. Although opening on a strong note, the RBI reference rate for the rupee which was in the range of 35.55/ 65 to the dollar, soon fell to around 35.75/ 76 on August 8/9. The RBI intervened intermittently to maintain the balance in demand and supply.

While fearing that the rupee will weaken even further, importers were busy booking their requirements and the large purchases by SBI were also responsible for the weakening of the rupee. Besides, Flls, the largest suppliers of foreign exchange in recent months, were holding back their investments. FIIs apparently reacted adversely to the Budget announcement of non-voting shares and the underlying political uncertainties. During August, Flls' net investments were only \$ 67 million (Rs 237 crore) as against \$ 302 million (Rs 1074 crore) in July. Though the rupee was not allowed to cross the barrier of 36 per US dollar, it generally stood lower with the RBI reference rate touching Rs 35.78

on August 29 (Graph B). The second half of the month also saw hardening of sixmonth premium which ranged from 181 paise to 208 paise or 10 1 per cent to 11.5 per cent annualised (Graph C). The rise in the call money market had led to the hardening of the premia.

## III Primary Market in Government Paper

State Loans

The Reserve Bank of India offered, on August 12, the 10-year state loans The second tranche of the state loans at a coupon rate of 13.85 per cent received an oversubscription of Rs 1,026.46 crore. For a notified amount of Rs 1,500 crore for 16 states, the Reserve Bank received an amount of Rs 2,526 46 crore. The Reserve Bank decided to retain the oversubscription. The Reserve Bank has been following the policy of getting the borrowing programme of the states out of the way in the first half of the financial year so that it might not clash with the centre's large borrowing schedule later in the year. The RBI has been adopting this strategy for the past two years as the liquidity position in the financial system remains uncertain. The first tranche of state loans in this financial year at 13.85 per cent coupon rate was issued in May which was also grossly oversubscribed thanks to the RBI's active intervention. The reduction in the yield rate was meagre compared with 14 per cent paid in the previous year.

#### Government of India Paper

After a spate of short-term paper, the government of India once again came up with

an issue of long-term paper in Augustlt notified the sale of 10-year paper havi fixed coupon rate of 13 85 per cent. Ear in June, the government had sought to i Rs 5,000 crore through the ten-year p at the same pre-announced rate of 13.85 cent. In order to attract investors, government had offered this in the formal a partly-paid security; the issue was subscribed. This time, the government of the a plain vanilla option and targetted to a modest Rs 2,000 crore. The market pan less than 50 per cent of the notified ame with a large portion coming from insura companies and provident funds. In applications, the RBI received Rs 9648 crore from the market which were all accept The RBI and the PDs took the balance ame with Rs 924.33 crore and Rs 107.29 cm respectively. Coming as it did on the day a the third tranche of the partly-paid second floated in June fell due on August 24, sale of 10-year paper was bound to lukewarm response from the market. outflow on account of partly-paid secu

was Rs 1,250 crore. Moreover, there was also an outflow of Rs 2,526 crore on account of state loans on August 12.

It was expected that this year, in view of the easy liquidity, the RBI would follow a conscious policy of bringing down the yield rates on government paper of various maturities but the reductions in rates has been fractional as compared with the pronounced increases effected while the coupon rates were kept on the upward trajectory. This was so whether for the short-term paper or longterm maturities. For instance, within the space of about a year, the yield rate on 10-year paper was allowed to be pushed from 12.35 per cent ir. May 1994 to 14.0 per cent in May 1995, but despite the availability of abundant liquidity, the coupon rate for a similar security in June 1996 was pre-announced at 13.85 per cent, when it was fully subscribed for to the extent of Rs 5,000 crore. It was again issued in August at the same coupon of 13.85 per cent which could not satisfy the market appetite for higher yields. For two-year paper, the coupon rate was fixed at 13.50 per cent last

| Aug 28                         | 18   | 269 50   | 9                      | 225.00            | 88.80                    | 12.61   |  |

year, but during the current year, it has in fact got raised to 13.62 per cent. As a result of fractional declines in individual coupon rates, the weighted average of coupon rates on government of India dated securities, which had worked out to 11.90 per cent for 1994-95, shot up to 13.75 per cent for 1995-96 and for 1996-97 so far, the rate works out to 13.71. Similarly, in the case of the state loans, the yield rate was perched up from 12.50 per cent in 1994-95 to 14 per cent in 1995-96 but this year it has been reduced rather in a niggardly fashion to 13.85 per cent. Thus, the central and state government budgets are invariably stuck with unduly high levels of interest burden because of the RBI's insistence on the so-called marketrelated rates of interest on government securities. A telling example of this inbuilt bias in favour of high interest burden on the government budget is to be seen in the latest rate of interest fixed on the five-year floating rate bonds, 1999 issued twice in September/ December 1995; it was set at 1.25 percentage points over the average cut-off yield for the six-month period in respect of 364-day TBs. Thus, the relevant rate of interest on FRBs for the half-year ending March 29, 1997 has now been fixed at 14.13 per cent (12.88 + 1.25). No attempt has been made to bring down the 364-day TB rates to more realistic levels.

#### - Treasury Bills

Primary yields on 91-day treasury bills showed considerable volatility during August. From a cut-off yield of 9.04 per cent in the

firmction of August, the yield fell by 98 baseoints to 8.46 per cent in the second au (Table 3). On August 16, the third n experienced a lukewarm response and a result, the cut-off yield had to be pure up rather sharply by 1 percentage page The auction received only 39 contitive bids - the lowest in two months munting to Rs 482.50 crore. Of these thes I accepted only 28 bids amounting to R: 7.07 crore at a yield of 9.46 per cent. It wonly on account of two non-competitive bi which were given a partial allotment of RI 2.93 crore that saved devolvement eiston the central bank or on the primary des. The high call rates and the drain on s. The high call rates and the drain on ble funds due to government loan sudriptions witnessed around this period wainly responsible for the sharp rise in theld on this paper. In the auction held oangust 23, although the RBI received high number of bids at 63, the amount reved was only Rs 225 crore which was sufficantly lower in comparison with the nket response to the TBs for the past cate of months. The paper, however, got ly subscribed thanks to the non-competitive blars, mainly states which were cash rich affreceiving funds from the borrowing pramme. The cut-off yield on this paper w maintained at 9.96 per cent in the last t ductions of the month, thus suggesting t the downtrend in this short-term yield r has been summarily arrested.

1364-day TB auctions, though improved imprarison with response during July, the met response was moderate in August.

However, the stubborn retention of this paper's cut-off yield at 12.61 per cent throughout since mid-July (Table 4) is inexplicable in the context of the need for sending signals of downward movements interest rates; this was so even against the background of the yield rate on this paper serving as a reference rate.

#### Bonds Market

The heavy competition in the bonds market, as referred to above, made the bond issuers to adopt new strategies for accessing investible funds. Offering high interest rates with special incentives and devising multi-option bonds for tapping the retail market have been the strategies tested by financial institutions, which of late the corporate sector has begun to emulate. Tata Steel and Larson and Toubro were the two significant players which entered the debt market towards the end of August. There were also some issues in the market which offered an 18-month bond with a put option after 15 days. A blue chip state-owned company was also reported to have raised Rs 50 crore by privately placing the issue with an overseas commercial bank which in turn securitised the issue with smaller portions to investors in Mauritius. The volume of honds in the primary market and the practices prevailing in the bonds market, bring to the fore several issues which need a closer look before the bonds market occupies the centrestage of the financial market activities in the next couple of years.

First, the most important issue raised by the recently issued bonds relates to the cost

<sup>(-)</sup> means no trading YTM = Yield to maturity in per centage per annum CY = Current yield in per tent per annum \* Yield rates of these sub-groups of t-bills and dated securities have been used for the graphs.

Notes: 1) Yields are weighted yields, weighted by the amounts of each transaction. 2) Current eld has not been worked out for treasury bills.

of funds. When financial institutions themselves raise funds at over 16 per cent, they obviously cannot onlend those funds at lower rates. Given this benchmark, the corporate sector will have to offer stiffer competition and pay an even higher return on its own issues. Even though such corporate sector rates may still appear lower as compared with the banks' and FIs' loan rates, there is no doubt that the overall cost of funds has been pushed up to unduly high levels and that it has not been conductive to promoting productive activities.

Second, this market impinges on the jurisdiction of too many regulators but it is least regulated. The RBI, the SEBI, the Company Law Board and the Bureau of Public Enterprises, all come into the picture but each without comprehensive powers. An illustration of the unhealthy practices that the absence of any specific institution focusing on this market can give rise to, relates to the tenure of bonds. The instance given earlier where an issuer issues a bond with 18-month tenure with a put option after 15 days clearly shows that the issuer has adopted this route only to raise 15-day money which it is not otherwise allowed to raise; and hence the bond route. Another instance is that of circumventing SEBI regulation of requiring to obtain credit rating for certain borrowings. Many corporates raise funds through 18-month bonds Apart from getting such corporates out of the regulatory framework, this gets the corporates into a very short-term debt obligation. This may not be good for corporate projects having long gestation periods.

Third, a problem affecting the secondary market activity in bonds is the absence of depository facility and cumbersome procedure for trading. It is well known that most PSUs take a long time to issue the bond certificates. Since bonds do not have a scripless trading facility, bond certificate is imperative if one wants to trade. Absence of a certificate either generates the much maligned intermediate instrument like the bankers' receipt (BRs), which was the very basis of the securities scandal in 1992 or dissuades the trader from trading. In the past, the RBI had offered to extend its depository infrastructure created for government securities transactions also to fresh issues of PSU bonds. The offer, however, was not taken up by the government for reasons best known to it.

Fourth, besides giving a boost to the secondary market activity, having a depository for the bond market would help resolve several related issues. To begin with, such a depository will have all the information relating to fresh bond issues including privately placed ones, as also that relating to the nature and extent of the secondary trading in bonds. Screen-based trading will facilitate monitoring of this activity and at the same time give confidence to the trading parties. Having the facility of scripless trading and a delivery versus payment system in bonds trading will go a long way in nurturing this market. A very significant issue in the healthy

deviapment of the bond market is an active seculary market. As of now very little infratation is available either regarding new issue activity in the secondary market. The onlinformation at present available regarding therinary issues relates to an aggregate picture of SU bonds which the RBI puts out in its pulcations and that concerning the secondary maket relates to those trades which are done on eNSE(Table 5). The predominant investors in adds being banks, a large volume in this make is presumably transacted off-screen, outde the exchange, over-the-counter or as tellione deals. Lack of transparency surely presidetrimental to the promotion of a healthy de market.

nally, once transparency is achieved, repo fality could also be extended to the bonds mket. Currently, repos are not allowed to nc-bank players and in securities other than gremment securities specially notified for re, BSE brokers too are not allowed in the sondary bond market, which may have some rionale considering, apart from the it ficiencies of the BSE's trading system, the rapant speculation prevailing in the exchange. To question is who should take initiative in orthing scripless trading facility? In the wake othe multiplicity of issuing corporate cegories, as also regulatory interests in this nrket, this question may not have easy sution. The government of India has to take azeisive action in this respect and entrust the ta to an independent organisation such as, tlStock Holding Corporation of India Limited sthat, on the lines of depositories planned feauity shares, the debt instruments are also bught under scripless trading.

#### IV Secondary Market

hted Securities

There was a general lack of interest in trading government securities during August. As a sult, prices of government securities constantly il thus increasing the yields. The limited iding interest witnessed during the month asalso confined largely to short-dated paper. 18,13.62 per cent 1998 was the most traded per during August with trades totalling Rs 764 crore. Next in importance was 13.50 per int 1997 which witnessed total trades worth s \$52 crore. Zero coupon bonds maturing in ) and 2000 also witnessed some interest. owards the end of the month, the freshly syed 13.85 per cent 2006 was traded to the xint of Rs 632 crore essentially because of fouting of banks' investments through PDs; wscrip was sold at a small discount which abled the yield to 13.90 per cent from the 13.85 pon rate.

It is pertinent to note that the secondary surket activity in government paper has evorded a significant increase since the RBI levided to pay commission to primary dealers, worder to share the commission with the imary dealers the banks have started routing for bids through PDs. The PDs pass on the curities to banks through SGL transactions the next day. As a result, the SGL account

shows inflated turnover in government securities.

#### Treasury Bills

In an aberration to the trend, the secondary market for 91-day TBs witnessed an inverted yield curve during the second week of August. This was due to the high call rates during the week which resulted in a higher yield on paper of closer maturity. White yield on TBs maturing on August 31, 1996 touched 10.37 per cent levels, that on paper maturing on November 9, was 8.72 per cent. The call rates during this week had nearly doubled from 4.5 per cent to 8.5 per cent As investors preferred to disinvest 91-day TBs to invest in the call market which fetched higher yields, the prices of this paper fell boosting the yields.

#### **Open Market Operations**

The RBI was not very active in open market operations during August, especially during the first half. The changes in the price lists put out by it were more to keep its quotes in time with the market. Nevertheless, it sold Rs 169 577 crore worth of securities and bought Rs 10 crore worth.

#### Yield Curve

Though there has occurred a general rise in the YTMs for all types of government paper during August as compared with those during July, the increases have been steeper in respect of TBs and shortdated securities. As a result, the yield curve based on the average YTMs for the five weeks of August appears largely flat (Graph D). The monthly weighted average of the YTMs for 364-day TBs increased from 10.81 per cent in July to 12.06 per cent in August, whereas the similar average of YTMs for dated securities increased from 12.91 per cent to 13.27 per cent. Within the dated securities also, many shortdated ones experienced higher YTMs than the long-dated securities, suggestive of uncertainties in regard to the liquidity situation and the market preference in the circumstances for short-dated paper.

#### Bonds

Bonds trading on the NSE being limited it may at best be only indicative. Such bonds trading on the exchange continued to be dominated by blue chip PSUs such as, IRFC, MTNL, NHPC, NTPC, NPC with an occasional trade in bonds of REC. The amount traded of bonds aggregated Rs 120 crore during August (5 weeks) as against Rs 88 crore during July. Corporate debentures traded at around 20 per cent yields and for about Rs 15 crore during August as compared with Rs 2 crore in July (Table 5). There was no trading in CPs but CDs with Rs 27 crore were traded in August against Rs 50 crore in July. The background review and statistical compilations for this paper were undertaken by V P Prasanth and Paramita Debnath].

**NARMADA** 

## State and the People

## **Styles of Suppression and Resistance**

Krishna Kumar

For the Narmada Bachao Andolan and similar resistance movements, the August happenings – all of which involved the different levels of confrontation between the movement's leaders, the state's strong and and the bureaucracy – ought to prompt some reflection over their future course.

FOUR Narmada-related incidents which took place in August deserve a close look and interpretation. Even the broad details pertaining to these incidents were ignored in many quarters of the media, and therefore require some narration. A distinct sense of boredom has surfaced in the media in relation to Narmada affairs, and indeed to a certain extent, in relation to all resistance movements concerned with ecological problems. The boredom is undoubtedly an outcome of the emerging consensus among owners of industry and the media, that popular ecological awareness is detrimental to speedy industrial growth. Killing of news relating to people's opposition to destructive development projects or legal battles waged as part of such opposition has become routine. A third party to join this consensus among industry and media owners are political leaders. They were never too keen on supporting ecological struggles, except when an immediate political advantage was at stake. Even this variety of interest has dwindled in high-level political circles since the advent of World Bank-directed economic reforms.

This is why the prime minister's meeting with the 500 people from the Sardar Sarovar region and Narmada Bachao Andolan leaders on August 2 was a notable and pleasant surprise. Soon after the rise of United Front to power in the centre, environment magazine Down to Earth (June 30) had commented that prime minister Deve Gowda was no friend of ecological struggles. The Narmada issue, of course, does not relate to the environment alone; it also relates to the immediate destiny of whole communities. The PM's level of concern for them became somewhat apparent as soon as the meeting started. He addressed the NBA leader as 'Madam Madhukar Putkar' and then announced that he had called the meeting on the advice of his colleague Indrajit Gupta. As if these signs were not enough to indicate the significance he himself attached to the event, he added that he had a very busy schedule and that several delegations were waiting to meet him. Indeed, the men and women assembled to hear him on the Narmada issue could see other delegations on distant patches of the vast, lush laws. These men and women had travelled all the way to New Delhi from what is one of the most different and isolated terrains in inhabited India. No PM or senior politician has personally experienced what it means to commute in and from this region in the monsoon season.

The PM promised to minimise displacement and misery before making an unexpected and welcome announcement. He said he would convene a meeting lasting two to three hours where the four concerned chief ministers, NBA leader Medha Patkar (named as earlier) and 15 to 20 people from among the dam-affected population (five from each state) would be invited. On some insistence by Medha Patkar for an early and specific date, the social welfare minister announced even as the PM was leaving that the latter had decided to hold the meeting on August 16. This was by any standards an exciting development in the decade-long drama of state deafness over Narmada projects. The four CMs had met in July at the PM's own initiative, and no one had then even considered inviting the NBA, let alone the dam-affected people. Residents of the Sardar Sarovar region had come to Delhi precisely to protest against the so-called 'resolution' reached in the July meeting. However, the surprise and the satisfaction arising from the PM's new wisdom - 'I will be in a position to say what to do next' after the proposed meeting, he said - did not last long. Gujarat CM Suresh Mehta reacted to the PM's plan by saying that he would not attend any meeting where Medha Patkar was present. Soon thereafter, the PM's office conveyed postponement of the August 16 meeting to the NBA, without mentioning a new date. This is how the first incident concluded.

The second occurred in Ahmedabad on August 17. Medha Patkar had gone there to hold a press conference. She wanted to appraise the Gujarat press about the outcome of the most recent hearing of the Narmada case in the Supreme Court at which the court had refused to remove the stay on further construction of the Sardar Sarovar dam granted more than-one-and half years ago. Sections of the Gujarat press had carried false and occasionally vicious items on the NBA's stand. Medha Patkar's idea of holding a press conference to clear the air could not materialise. The house of Gujarati writer Ashwini Bhatt where she was staying was surrounded by slogan-shouting BJP activists and the police who said nothing to the crowd but arrested Medha Patkar. She was first taken to a police station outside the city. then to Godhra, and finally dropped, after the full-day confinement in the back of the police jeep, in Baroda at night. That ended the second incident.

The third and fourth incidents occurred near the site of the Bargi dam in Madhya Pradesh. In contrast to the Gujarat government, the MP government has maintained an NBA-friendly face over the last little while, despite its own terrible record in rehabilitation at Bargi. The government's media-management has so far helped Bargi evade the bad name it deserves in common knowledge about displacement misery. Disappearance of people, repeated deceit by the government, and a routine 'yes-but' attitude on the part of officials have been salient features of the Bargi story. As in previous years, a 'dharna' was organised at Bijasen village of Seoni district during this monsoon. The immediate demand was that the government should not fill the Bargi reservoir beyond 418 metres above sea level so that the submergence land could be used for cultivation. The government was determined to raise the water level to 422 metres. On August 18, talks between Sconi's administrators and the people suddenly broke down and a severe lathi-charge began. Neither women nor children were spared. A statement signed by 13 victims of the lathicharge notes that the district collector personally participated in it. The state's chief secretary's submission to the national human rights commission says that the police resorted to the lathi-charge when the people threw stones and sticks. How, and how many, stones and sticks could have been found in a piece of cultivable land with a strip of water already approaching is one of the many little details worth wondering about.

Next day, Medha Patkar joined the dharna demanding an inquiry into the lathi-charge

and release of the people arrested, in addition to the demand concerning water level. On the morning of August 20 she was arrested and taken to Rookhad for solitary confinement in a forest guest house which has no telephone link. Her statement about the mode of arrest and a photograph of the moment of arrest reveal the cold vulgarity with which the Seoni police dealt with her. When told that she was to be arrested, she expressed her wish to be heard first, but the police simply dragged her away through the slush even as her glasses broke and shoes got left behind. The photograph shows her being pushed towards a boat by four women constables, themselves surrounded by more than 20 policemen. The condition of her clothes and hair shows the amount of physical force applied on her. Even while she was seated on the boat, she was pressed hard from behind. In a telephone conversation, the chief secretary of MP. reputed to be a sympathiser of the NBA and an admirer of Medha Patkar, told me with certainty that she was arrested because she would have committed suicide by drowning. and furthermore that it was necessary to keep her under arrest as she would try the same thing if she were to be released. She was eventually released 10 days later following an order from the Jabalpur High Court which held her arrest on August 20 to be illegal. By then, the water level had reached the level of 422 metres. Following Medha Patkar's arrest, many more people were arrested, some at a point when they would not have survived the rising waters. Finally, after the high court's order of Patkar's release, negotiations were held between the NBA and the government. All those arrested were to be unconditionally released and an independent inquiry was to be made into the lathi-charge. As for the water level, December 15 was fixed as the date for bringing down the reservoir to 418 metres. The provincial media were supporting the government's stand all along. The only pressure the government was under was that of hundreds of individuals and environmental organisations both in India and abroad, including Greenpeace, who expressed outrage over the Bargi drama.

The four incidents outlined here offer us an opportunity to reflect on the functioning of the state and the problems of a people's movement. Political leadership and the bureaucracy have been working in cleverly designed distant ways which permit the former to look friendly towards people's resistance while the latter ensure the determined pursuit of the plans that people are opposing. This division of labour is, of course, not new, but its implications are getting harder for the political leadership to sustain. With a pro-people image to protect, the UF government must find it discomforing to have its PM look

assummodative to a BJP chief minister while the al reason for the PM's change of mind land bureaucratic advice. We can see in the miniature graphic of our times a solid chall of the claim frequently made that the braucracy is losing power or ground. If orders of industry and their friends in the contraction business ever needed help, its net trustworthy source would surely remain it be bureaucracy. Although its historical chacter and origins are well known, this follows, rule-quoting class has not even been to be understood by scholars of Indian say and society.

What happened in MP was another cample of the division of labour between thureaucracy and the political leadership. han the chief minister of MP was shown e photograph of Medha Patkar's arrest at oress conference in Delhi, all he said was at the chief secretary had great respect for r The Hindu, August 28), suggesting that SCM could not be blamed for what ppened at Bargi. The lathi-charge the ts and confinement, and the subsequent entiations notwithstanding, the state wirnment accomplished what it wanted to as filling of the reservoir was concerned. For the NBA and similar resistance owements, the August happenings ought bing a disturbing thought and an occasion reflect on it. The conversion of NBA's **known** leader into a symbol is a momenon which has been crystallising r some time now. Resistance being the niral theme of the movement, the thought certain life-span in its momentum cannot avoided, nor can one expect that the rable demands life has made on its fullin leadership would not cause depletion Inner resources. The NBA itself has me a symbol of rational scepticism wards the socio-political and economic mation that 'national development' has assumed. NBA's experience has become a consolidated resource for anyone interested in making a truly objective study of the ideology of developmentalism. The grounds on which the NBA has opposed the Sardar Sarovar project are supreme examples of substantive rationality which few in India, even among scholars, have learnt to distinguish from the instrumentalist rationality practised by the state in the name of development. And the Narmada struggle has opened up strikingly new points of enquiry into modernity, particularly into the structures of domination associated with modernisation in post-colonial conditions. It is a simplistic perception projected by many observers, that the Narmada movement represents preservationist traditionalism. The implications of the movement for many areas of civic life, particularly the areas that verge on basic needs and fundamental values, are deep and inviting. To have opened up an attractive vista for future course of social action and theorising is no small achievement. The conversion of NBA leader Medha Patkar into a symbolic entity forecloses precisely this course. For one thing, both she and the NBA become more vulnerable to state manipulation, and not just to state violence. The record of her August journey from one brute suppression to the next tells us that popular resistance becomes a lot easier to deal with when it congeals around a definite symbolic figure. Not a few people's movements and many more voluntary groupings have suffered on this kind of road. The NBA has had a distinct identity among India's ecological movements because it had a strong base among the masses, built over time with laboriously organised popular education. Just because the state has proved deaf and the intelligentsia callous, the programme does not need to turn on itself.

## **Unrest in Junior Colleges**

J V Deshpande

The recent 19-day statewide strike of junior college teachers in Maharashtra was another instance of teachers having to resort to prolonged agitations merely to protect their existing working condition. The strike has also shown that the Shiv Sena-BJP government is as devoid of new ideas in education as all its Congress predecessors.

EVEN though the near-total strike of the junior college (higher secondary school) teachers in Maharashtra has been called off after 19 days, the concerned teachers are not a happy lot, nor is tranquillity expected to return to junior and degree colleges in Maharashtra. The settlement reached with the state government has not satisfactorily tackled either the short-term issues or the basic issues of teachers at the higher secondary level.

College teachers' agitations have been frequent in Maharashtra in the recent past. The teachers are often blamed for this, however genuine or justified their grievances may be - the line of reasoning being that teachers should not (1) stoop to agitational working class methods, and (2) hold students. an innocent party, to ransom. Of course, in any stoppage of work, a third innocent party always suffers (for example, commuters when transport workers stop work). As for nobility, it is not clear why teaching should be considered nobler than other vocations or, more pertinently, why other vocations should be considered less noble and also why persons in a noble profession should not adopt working class methods. The little that the college teachers in Maharashtra have gained has been mainly due to their use of agitational methods. In fact, on many an occasion teachers have had to resort to fresh agitations just to get earlier agreements implemented.

The latest strike and its withdrawal bear this out. Briefly, after a long struggle a few years back, the government of Maharashtra agreed to introduce a special scale in junior colleges for those with at least 12 years of service. When the actual orders were issued, the government inserted a rider that the senior scale will be given to the teachers only 12 years after they have taken a degree in education in addition to their subject qualification. After a strong protest from the teachers, the extra condition was dropped. Now, four years later, government has not only reintroduced the additional qualification but has also proposed that it would recover the extra pay given in the past four years running into thousands of rupees each from hundreds of teachers.

A degree in education was not a prerequisite when the junior colleges were

first formed. Many teachers employed in 1970s were already confirmed before BEd rule came into force. Because Bi colleges are so few, because of the rampa malpractices in admissions to them (me are controlled by local political heav weights) and because of difficulties in taki a year or two off to get the BEd degree working teachers find it very difficult acquire a qualification in education on they are holding a job. Thus the government decision effectively denied the senior sca virtually to all the older teachers in the juni colleges. As a part of the latest compromit the Maharashtra government has agreed withdraw the condition of a degree education for eligibility to the special scal

After a phenomenal growth in the 197 and 1980s, enrolment in junior colleges he shown a declining trend, particularly in the arts and commerce streams in rural Mahrashtra. The reasons behind this need to seriously investigated. A fall-out of this shriking enrolment is the closing down of extidivisions in many junior colleges in rural are rendering their teachers surplus. Till not managements could not terminate anyone services without the consent of the government. The latter had proposed to give up authority in this respect, leaving teachers the mercy of the managements. The agreement now entered into restores the status qui

A prolonged and statewide strike of days has thus enabled the junior collecteachers simply to hold on to their existing working conditions—a classic case of running hard just to stay where you are. Under standably, the teachers' jubilation is mute. They will be well advised to wait till the see the government notifications actually print. Further, the agreement now reached has not only left many pressing issue unattended, it has not even bothered to fad the basic problems faced by teachers of the plus-two stage of education.

Late payment of monthly salaries is major grievance of the majority of teacher Often the entire staff of an institute gowithout salary payments for months on end. The plight of teachers in government-ru colleges is often worse. Although the salar support came from the government, actually payments used to be made by colleges.

managements in the past. Because of many complaints of harassment and malpractices, salary payments were taken over by the government. Over the years, this has created its own avenues of malpractices, at least of bureaucratic indifference and delay. The procedure needs to be streamlined urgently, but the matter has not been touched at all in the settlement.

A factor which contributes significantly to delay in salary payments is the large proportion of unconfirmed teachers in many institutes. This leads to rapid turnover of the faculty and the attendant paperwork holds up salary payment. Hundreds of teachers appointed against reserved posts continue year after year without any job security. To their number are added those without a degree in education. A large body of temporary staff in an institute is not only academically deplorable but also gives a handy tool to unscrupulous managements to harass teachers. There seems to be a general reluctance even to face this real human problem because of its political implications.

The frustrations and the hardships which a teacher in a junior college faces are not easily grasped, even by others in the teaching profession. He (or, more likely in the urban areas, she) needs the same subject qualifications as his counterpart in a degree college. In addition, he needs to have qualifications in teaching methods. With only two years of jumor college to teach and a workload of 24 periods per week, it is inevitable that he has to repeat the same lesson three or four times a week. Nothing could be more deadening to a conscientious teacher than doing this year after year. On average, he will be teaching six different classes per term. This makes for a staggering number of 2,400 scripts (100 students per class, your examinations per year) to be graded in 10 months. Recause of the two-year span of the plus-two stage, the chances of professional advancement are very slim. Further, in Maharashtra, the majority of junior colleges are run as part of degree colleges of the same management. This effectively excludes teachers in junior colleges even from minor administrative advances such as a viceprincipalship or the headship of a department. Even with salary-scales comparing poorly with those of other white-collar office jobs or jobs of bank clerks, many persons who were academically inclined still used to prefer a teaching career for the intellectual satisfaction it brought. This is totally absent in today's environment and a career in an academic institution now attracts far less committed persons than before.

When the 10+2+3 scheme of education was first introduced 20 years ago, the reasons given were (1) to divert a large number of high school graduates into trade and technical courses at the plus two stage, and (2) to restrict degree and postgraduate education

to the meritorious few. Neither of these two objectives has been achieved, nor are they likely to be achieved. The only achievement has been to divide college teachers into two castes – those in degree colleges and those in junior colleges – with different emoluments and different working conditions even while working in the same premises. This has led to a steep deterioration in working conditions in colleges. Since the professed objectives of the 10+2+3 scheme are not being reached, surely the time has come for a serious reconsideration of the basic pattern itself. But of that there is no indication at all.

A couple of other lessons of the latest strike may also be noted. For one thing, the stud has shown that the present SS-BJP godinment in Maharashtra is as devoid of ne deas in education as all its Congress princessors. Like the earlier governments, thy also prefer to be led by the bureaucratic aparatus. The other noteworthy feature was th isolation of the junior college teacher's uras from other active trade unions. Even th unions of school and degree college techers took only token action in its support. Man like the textile workers in the last deade, the teachers of junior colleges are wing their struggle on their own. Solidarity ofhe working class movement has once aga been shown up to be so much wishful thicing.

## Part-Time Teachers in Karnataka

Ambarao T Uplaonkar

The indiscriminate granting of permissin to open colleges without satisfying primary requirements resulte in a spurt of part-time teachers in Karnataka. With the adoption of UC norms for the appointment of teachers by the state government, these art-time have been put at a disadvantage.

OF late, the practice of appointing part-time teachers has become almost a permanent feature of higher education in Karnataka. This practice is a result of the short-sighted policy measures pursued by the state government. It is the result of unplanned and indiscriminate granting of permission, under political pressures, to open colleges without any regard for even minimum and basic requirements such as infrastructure, teaching and non-teaching staff. Consequently, there is a mushrooming of colleges without teachers. Colleges are being opened both by the government and private bodies in small towns and taluk places even when there is no need for them. Due to technical and procedural snags and financial constraints, permanent and regular teachers are not appointed for years. There are a number of government degree colleges in mofussil areas where the principal is the only permanent staff member, while the rest are part-time teachers. There are instances of students of government colleges going on agitation for non-completion of syllabus due to shortage of teaching staff for the entire year. In other words, as permanent and regular teachers cannot be appointed due to various reasons, part-time teachers are taken on as a temporary measure until permanent appointments are made.

The problem of part-time teaching is also a consequence of the liberal concession extended to private managements to open colleges. For example, SC managements are allowed to open new colleges on condition that they are free to appoint teaching staff but bear their salary for a period of seven

yes (earlier it was only two years). In such ciences part-time teachers are appointed uil the college becomes eligible for grantinidafter seven years. A similar concession islap given to non-SC managements to on any number of colleges on condition th hey manage their expenses, including stigalary, on their own without ever seeking a from the government. It is reported that the are about 50 such colleges functioning ing state. It goes without saying that such magements too, can appoint part-time tchers. Further, clear vacancies which arise oaccount of death and retirement are not feel up for years because of financial curraints. In short, part-time teachers have beine an inevitable necessity of higher ention in Karnataka.

problem of part-time teachers acquired

problem of part-time teachers acquired resultance after the Karnataka prinment abolished the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the practice of the p

e UGC has been constantly making ts to contain the deteriorating standards

of higher education. It is the considered opinion among educationists and scholars that the standard of university and college teachers has gone down as higher percentages and degrees are recklessly awarded to students on considerations of caste. community and influence. Of late, high marks and degrees are even given under pressure of intimidation and corruption. In order to raise the standard and quality of college teachers, the UGC, according to the recommendations of the Mehrotra committee (1986) on revision of pay scales of teachers in universities and colleges, made it obligatory for them to qualify at the national education test (NET) conducted for the purpose by the UGC or any other agency approved by the UGC and have at least 55 per cent marks at the master's degree level. However, the Karnataka government accepted the recommendations of the UGC in principle but gave exemption of clearing NET for those who had MPhil or PhD by 1992.

The adoption of UGC rules gave a severe blow to the prospects of regularisation of part-time teachers who had just 50 per cent marks at their master's degree level. For others, the new rule of qualifying at the NET was an insurmountable block. Thus, the part-time teachers in service felt that the application of UGC norms for them was an act of grave injustice for, when they had joined the service these rules were not in operation. Therefore, they argued that those already in service before the adoption of UGC scales should be exempted from the UGC norms and the state government should regularise their services.

However, the state government did not concede their demand, as the UGC would not agree to such modifications. It was the state government's mistake not to have stopped further appointment of part-time teachers when it accepted the new UGC rules in principle in 1986, and it should have made honest effort to convince the UGC to exempt all those working as part-time teachers prior to 1986. It appears that neither the state government nor the UGC is serious about the problems of college teachers as there is no rapport between the two. But efforts were being made by the state government to resolve the issue of the parttime teachers through alternative means.

#### PROBLEMS OF PART-TIMERS

There are about 2,500 part-time teachers in the whole state most between 25 and 35 years of age. More than half are said to have put in a minimum of 10 years service. It may be observed that candidates who have crossed 30 years and completed 10 years of teaching service, have few opportunities of alternative employment in future.

Generally, the part-time teachers are appointed, as temporary candidates from the

organising of the academic year July I and terminated at the end of March. The appointment is renewed every year subject to the candidate's performance. The objective behind such a policy of the government is that part-time service should not be considered as a legal basis for claiming full-time or permanent appointment nor for the continuity of service, in case of recruitment through the duly constituted bodies by the state. It is unfortunate that the part-time teachers are thus discriminated against and used as sacrificial goats by the state government.

It may be observed that the employment situation of part-time teachers has been worse than that of daily-wage earners in the state. For example, part-time teachers were previously being given a consolidated amount of Rs 400 a month for eight months. After repeated appeals the wages were raised from Rs 400 to Rs 600 and from Rs 600 to Rs 1,200 a month recently. But in private colleges even this meagre amount is not paid every month and delayed for two to three years for reasons of not receiving funds from the government. Well-to-do private managements, however, do pay a meagre amount to part-time teachers on humanitarian grounds. But there are reports that some private societies pay only half of the actual wages and force the teachers to sign on the acquittance roll or collect cheques for salarycuts in advance. Any protest or resistance from the teachers may cost them their job at the time of renewal of appointment in the next academic year.

The effects of part-time teaching should be viewed with seriousness by the state and central governments and all those concerned with the status of teachers and the standard of higher education. Part-time teaching should be viewed as a form of unemployment among educated youth. The immediate concern of the part-time teachers is about the regularisation of their service. Even after regularisation of service if their previous service is not considered, it will adversely affect their service in respect of seniority, scale of pay and pension, besides other benefits. In case their services are not regularised, the Damoclean sword of unemployment hangs on their head. Sociologically, the employment status of youth, especially educated youth, has several effects on the personal, familial and social life in particular and on the larger society in general.

A major effect of unemployment is that it produces in the person a sense of insecurity and tension which in turn, weakens his social esteem and self-image. It creates a loss of status. Unsteady employment undermines health, weakens ambition and unsettles his life. Viewed in the context of part-time teachers, unemployment (or underemploy-

in constant state of disappointment and frustration. A number of studies carried out on the social effects of unemployment have shown that the incidence of unemployment among educated youth tends to postpine their marriage, as stable and secued employment has become a prerequisite or marriage in modern society.

The practice of part-time teaching has significant repercussions on higher education. Part-time teachers are an aliented and isolated lot in higher education as they do not constitute an integral part of the institution in which they happen to be working. For example, college authorizes do not assign them any responsible job sch as advisors to student activities, or as members of admission committees, etc. They are almost treated as outsiders to the college.

The part-time teachers, due to their mea wages and an uncertain future, do not motivated to identify themselves with the institution, staff and students. Uncernin employment tends to prevent them fam identifying themselves with the role of teacher and the cause of students d education. As part-time teachers, they do ot receive their due respect, honour ad recognition from students, staff and princip They constantly feel a sense of deprivation, injustice and degradation, as they are made to complete half the syllabus with a mealre and insecure wage of Rs 1,200 a moth whereas the full-timers get four times dat salary.

The attitude of the state government towards the issue of part-time teachers hs been one of indifference from the beginning. Although the practice of appointing pattime teachers has been in existence in he form of stop-gap arrangements and contract teachers, for a long time no thought has ben given to formulating a sound policy. For example, the part-time teachers association submitted a memorandum of appeal to be then Congress government headed by Veerendra Patil to redress their grievands. But the government turned a deaf etc. Considering the lukewarm attitude of the government the association staged a dhada in front of the vidhana soudha at Bangalok. Even that did not work. Realising the gover ment's apathy, the association sought intervention of the Karnataka Administrati Tribunal for a speedy solution. The tribund. too, could not be of help. As a result, the problem of part-time teachers worsened with the government made it a rule that two pa timers be appointed in place of one stopgaper or a clear vacancy.

The situation became worse when de state government suddenly adopted the UC norms of a 55 per cent minimum at postgraduate level and clearance of NIT without giving any thought to the plight of

those who had been working for five to seven years as part-timers. However, considering the complexity of the issue, in 1993-94 the Deve Gowda cabinet took a favourable step by constituting a committee headed by Sharma to go into the different aspects of the issue and suggest suitable remedial measures.

After considering the seriousness of the problem in the light of the recommendations of the Sharma Committee the cabinet decided on November 8, 1995 to regularise the services of all part-time lecturers in junior colleges who have put in more than two years in phases until 1997, although the actual norms of appointment were not spelt out. Of course, the step taken by the government is a welcome gesture. However, the step is an ad hoc measure and not a longterm policy, and it has defects. For example, the number of part-time teachers in subjects like physics, chemistry, etc, working in science (degree) colleges is likely to be more than the vacancies in junior colleges. Obviously a good proportion of such teachers will have to remain in the same college as part-timers. Absorption of such teachers may go beyond 1997. The cut-off date will adversely affect such teachers. Again, subjects like statistics, education, fine arts, commercial painting are generally not taught in junior colleges.

Although the state government has solved the problem of part-time teachers at present, as yet there is no definite policy. For example, the state government has declared its intention to stop the appointment of part-time teachers from 1995 and fresh vacancies will be filled in through a state level recruitment committee.1 But this is not so easy as bureaucratic procedures take time and appointments will be delayed for years. Even if the procedural snags are cleared, there will not be enough candidates who have cleared the NET. The results of NET examinations have shown that hardly 2 per cent of the candidates pass the exam. As a result, parttime teachers will become an inevitable necessity. It should be realised that unless radical changes are introduced in the policy of expansion, affiliation, system of examination and teacher training, the problem of part-time teachers will continue to vex all concerned.

#### Note

In a sudden development the directorate of collegiate education, Karnataka, has asked (vide circular June 27, 1996) all degree colleges in the state to abolish the post of part-time lecturers and re-appoint retired lecturers on contract basis. But this is not a wise policy. It is not easy for the government to appoint lecturers as and when posts become vacant due to constraints and procedures. Colleges cannot be run without part-time teachers.

## 'Backwards' and 'Dalit' Take a Back Seat

Amaresh Mishra

While the electoral behaviour of the dist and backward castes will certainly be a key factor in the outcom of the coming assembly elections, there is a perceptible shift in political focus of all political forces which is likely to benefit the upper castes.

FOR an election which appears all set, once again, to decide the contours of national politics, the build up to the latest electoral round in UP is pathetically devoid of lustre. All political parties have hyped their importance for their respective camps - the United Front (UF) has gone as far as to hinge the fate of its government at the centre on its outcome, the BJP knows that after developments in Gujarat and the court summons to Advani in the hawala case it is left to UP to conduct salvaging operations, and the Congress is waiting for its resurrection. The BSP is finally making a bid for power and the chief of the Samajwadi Party is fighting for his political survival. But the crucial bind in which the parties find themselves is not being translated into raising of the political pitch. The party which is seen to be the front runner, the BJP, is not even frontally attacking its main rival the UF led by the SP and all other parties are somehow failing to record any level of enthusiasm amongst their workers. Even the type of issues that were dominant till a few years ago, like Mandal and mandir are conspicuous by their absence and the familiar invocation of populist issues is also missing.

This is, in a sense, an election sans issues; yet, for this very reason, it marks a decisive phase in the state. At an immediate level, it will repeat the political pattern seen in the last parliamentary elections, with the upper castes rooting for the BJP and the backwards and dalits for the SP and the BSP. But there is a saying current in UP villages - 'is baar sab jaat ka vote sab men pade ga' (this time all castes will vote for all the parties). It seems that the days when UP politics used to revolve exclusively around the assertion of the backward castes and dalits are over. There is a perceptible shift in the political focus. During the last parliamentary elections, dalits had emerged as an electoral force in their own right. Instead of a straight contest between the BJP and the SP, seen in social terms as one between upper and backward castes led by their power groups, the fight is now deeined to be a three-way one, with Mayavati as the new contender against Mulayam and Kalyan Singh.

But this configuration has benefited, quite unexpectedly, the upper castes. Indeed, in the campaigns of the major parties, including

th SP and the SP, the crucial aspect which ismissing is the now almost customary and all to the backwards and dalits. The UF is encentrating exclusively on 'farmers'. 'nuths' and Muslims with prime minister Lve Gowda, instead of the 'tainted' Mulayam Sigh, at the head, while the BSP is gunning ngle-mindedly for the former chief minister. Ven the customary exhortations to dalits to oture political power have vanished from te appeals of the BSP which seems to have slefined basic dalit issues with political exterity by positing the anti-Mulayam 'aimesh Chandra report' as the main poll unk. The BSP is now actively soliciting e support of the upper castes, both the ulturs and the brahmins. It has advised its y, the Congress, to field as many brahmin andidates as possible and is poised to offer tkets to a large number of thakurs in east P. especially those with criminal records tainst the yadays in the countryside. ukurs, brahmins and other forward castes calso being wooed by the UF which has ready scored a point in west UP by enlisting e support of Ajit Singh and his jat constiency. Among the Left forces, there has and a substantial erosion in the identity and fluence of the CPI and the CPI(M) within •UF, while the CPI(ML) is contesting 46 : ats. At the same time, the prime minister's dependence day declaration of a separate ttarakhand has increased the importance ithe UF of this overwhelmingly upper aute region, which was considered unmortant by Mulayam Singh in the Mandal ays because of its caste composition.

is this situation which is causing jitters 1: the BJP camp. The party otherwise is vell-placed as its opponents are split but the hange in balance in favour of the upper aites, which should have worked to its divantage, is also exposing its vulnerability. Uttarakhand declaration has enhanced the position of N D Tiwari's Congress(T), IF constituent, in the hills at the expense the BJP. In the plains, the thakurs and a can no longer be taken for granted and the brahmins too are playing a waiting game—hey are very much with the BJP but their is are also set on which way the Muslim with will move.

The Muslims are themselves in a fix – the appoints of their poor and lower middle

classes, very much like their vadav counterparts, still regard Mulayam Singh as their leader. But a section of their elite leadership is inclining towards the Congress-BSP combine which is playing up the prime minister's meeting with Bal Thackeray in order to garner more support. Imam Bukhari of the Jama Masjid has also lent his support to the BSP. In his joint meetings with Kanshiram he is projecting the plank of dalit-Muslim unity which is sounding, at least ideologically, more advanced than anything being offered by Mulayam Singh. There are prospects of tactical voting by the Muslims against the BJP and if that happens even in a few constituencies, brahmins may move towards the BSP-Congress combine, especially in places where the Congress has fielded good brahmin candidates. The changed situation in the state is objectively geared to favour the Congress, though it remains to be seen if the party is able to make a comeback in terms of the actual results.

At the same time, there is no clear sign yet of the political inclinations of the most backward castes (MBCs). Their role is going to be crucial, after that the Muslims, in deciding whether or not the BJP gets a majority. It is crucial for the BJP that it breaks into the MBC and also, if possible, the kurmi vote. That is why it is imperative for the party to continue projecting Kalyan Singh as the future chief minister despite the bitter factional fight in the state unit and the pressure of the upper castes to effect a change in the leadership. Thus, while on paper BJP, Mulayam-UF and BSP-Congress occupy, respectively, the first three positions. dramatic changes can also upset the political balance. If the BJP tally fails to touch the 213 mark and there is a hung assembly, it can also support Mayavatı as chief minister to keep Mulayam Singh out. Conversely, the UF can also inch closer to the BSP to keep the BJP out.

But though it appears that in any eventuality the BSP will be the gainer, the party is actually vulnerable at the ground level. In east UP, for instance, the tickets given to the thakurs are in an area where the dalits have a history of violent conflict with the upper castes. In fact, the rise of the BSP in the region was due in large measure to the rise of dalit outlaws who waged a running battle against the upper castes and their criminal gangs, largely thakur in origin, at that time owing allegiance to the BJP. Most of these outlaws were shot in encounters or gang wars so that dalits are without the kind of protection that was available before. On top of it, the BSP has given tickets to thakurs. All this will weaken the position of the dalits at a time when their party is bidding for power in the state. In east UP, which will decide the future of the BSP and where the class situation is precarious, the balance is tilting against the dalits. The dalits will, of

course, vote for the BSP and the Congress in these elections, but a new process has begun with very interesting implications.

Mulayam Singh reflected both the class position and the short-sightedness of the socio-economic forces represented by him. perched between an attempt to gain access to the upper echelons of power and the desire to keep the lower classes at bay. His position remained midway between the BJP and the dalits - a kulak leadership could have taken the dalits under its wings for a fight against, or an adjustment with, the upper classes. But this did not happen because of Mulayam Singh's short-sightedness and vacillations. But Mulayam Singh's vacillations, his antidemocratic acts and his anti-leftism and, at the same time, his failure to get accepted by the ruling classes reflect the failure of the kulaks to emerge as the ruling class, in political terms, in UP.

The class nature of the BSP has often been debated, but now the answer is becoming clearer. Kanshiram represents the interests of the big landlords and the big bourgeoisie. He, much more than Mulayam Singh, is the real representative of the ruling classes in the state. He is cool-headed and calculating, a person with a long-term view of things. It is no coincidence that he's becoming the vehicle for the revival of the Congress and the ruling class equations of the past.

The UF is also moving towards n equations. At present it may be the main pi Muslim party, but subtle shifts are taki place in its position. Deve Gowda's meet with Bal Thackeray and its defence Mulayam was part of a design to forge a n equation with the dissidents of the BJP with the Shiv Sena and the Congress min Narasimha Rao. The UF is slowly retreate from the backward-dalit-Muslim plank a this will become clearer in the post-electi scenario. Disillusionment and confusion i only in the centrist but the rightist camp w also grow and observers are talking about an emerging political vacuum in the sta The Left will gain from this situation a already dissidents from the Samaiwadi Pal are finding an alternative in the CPI(M which, unlike the CPI and the CPI(M), h kept intact its distinction from the centil camp. This counter-flow, from the centre the Left, even though only a trickle still taking place only towards the CPI(MI which expects to increase its votes in t elections.

RUSSIA

## Winter Woes of Yeltsin

Dev Murarka

The history of Yeltsin's sickness and the way it has been handled at the political level is creating a tragic legacy for the country. Because Yeltsin has ignored so many inconvenient democratic procedures and because the people have been again and again deceived about his physical condition and by his extravagant and false promises, democracy as a political institution has been thoroughly discredited in the people's eyes.

EVEN as a bright, sunny autumn dances before the eyes in Moscow, a winter fog is descending upon the Kremlin, the political citadel of Russia. It is caused by the alarming physical condition of president Boris Yeltsin. Gone is the summer glow of the election victory and the dazzling inauguration. An extraordinary state of apprehension and confusion has gripped the Russian polity because of it. Through the fog other figures can be discerned executing manoeuvres in a not-so-discreet power struggle.

This power struggle has been going on for months while the president has gone from one clinic to another in search of a cure. But when he himself announced on television on September 5 that he had a heart ailment requiring an operation, a note of urgency was added. His health acquired a new political dimension because it unavoidably placed the question of his successor on the agenda.

This question will not go away till he physically fit again, and that may not be to soon.

The paradoxical situation is that while Yeltsin needs a coronary bypass operation badly, it cannot be done at this stage because of his poor physical condition. This is the verdict of a council of medical experts hel on September 25 in which the well know American cardiac expert, 88-year-of Michael DeBakey also took part. As a resu it was agreed that while a bypass surger will restore Yeltsin to a normal condition as far as the functioning of the heart goe other complications and his weak physic condition dictate that a period of 8-10 week is required to build up his strength ar prepare him for the operation. Otherwise th risk is too great.

It is now becoming obvious to the Russia public that it was deceived on a grand scal by the Yeltsin establishment which hid from it the really serious state of his health and the fact that he suffered, something approaching a heart attack just before the second round of voting on July 3 and persuaded it to vote for him. For political reasons, even the doctors designated to look after him are not very clear on this and his own entourage still refuses to accept that this happened. However, it is incontrovertible that since then Yeltsin has appeared only once in public, on his inauguration day on August 9. As a result, the country has been without a fully functioning president for nearly three months. Even more because he was already taken to a clinic a few days after June 16 when the first round of the presidential elections had ended.

The illness of the president is not exactly a surprise to anyone (see 'Yeltsin's Last Hurrah', EPW, June 8, 1996 and 'The Sixteenth Mcssidor of Boris Yeltsin', EPW. July 6, 1996). Despite all the reassurances of his acolytes to the contrary, it has been evident for a long, long time that he is a very sick person. Only the Herculean efforts of medical experts and his own addiction to power and a determination to hang on to it at any cost to the nation, keep him going. He is utterly indifferent to and oblivious of the highly negative consequences for the country, in the short as well as the long run, of his continuation in power in a debilitated state. Poor Russian people! Having been brainwashed to re-elect him so recently, they have no alternative except to suffer him as best as they can.

Yeltsin has a long history of alcohol addiction and illnesses during the last decade. He became seriously ill with nervous exhaustion in November 1987, after being sacked from the post of the first secretary of Moscow City Communist Party. In 1990 he suffered spinal injuries during a flight to Spain when the plane made a very bumpy landing. In October 1991 he disappeared from public view for two weeks due to a minor heart problem. In July 1995 he suffered a heart attack and was away for treatment for a month. In October 1995 there was another heart attack from which he took almost three months to recover. In June 1996, after winning the first round of the presidential election on the 16th, he cancelled all tours and practically ceased to appear in public. He was taken to a clinic for top leaders. It is widely assumed that he suffered his third heart attack towards the end of June or the first days of July. As the crucial second round of voting was only a couple of days ahead, it was kept a complete secret from the electorate.

According to *Izvestia* (September 7, 1996), this actually happened on June 30, on a day when Yeltsin's scheduled meeting with the young democratic leader Grigory Yavlinsky, after a long wait during the day by him, was

cancelled without explanation. Who knows, if the meeting had taken place some political accommodation between Yavlinsky and Yeltsin might have been arrived at. It underlines how the physical incapacity of the president is affecting the political situation in the country. Izvestia also contends that he simultaneously suffered a light stroke at the time, though none of the medics have mentioned this.

According to academician Andrei Vorobivoy, who chaired the medical council, Yeltsin has ischemia, angina pectoris, cardiosclerosis, posthaemorrhagic anaemia and dysfunction of thyroid gland. His heavy drinking habits, mostly vodka and cognac, are well known. According to newspapers he also suffers insomnia and deafness in one ear. Yet others claim that he also has liver and kidney problems. The cumulative effect of all these physical disabilities makes a successful heart bypass operation highly risky because they react with each other and in the course of operation can cause fatal complications, endangering a successful outcome of the surgery.

However, it is symptomatic of the false patriotism projected about his treatment by Yeltsin that after all the unseemly noise about distinction between Russian and non-Russian doctors, even the Russian specialists are citing the American DeBakey as the authority for their final decision. Their usual remarks are that DeBakey approved the public about his "firm handshake as earlier, prognosis and the decision to postpone the even strong", his "energetic voice", his operation for a few weeks. The American specialist is also offering public testimonial to the otherwise excellent physical condition of the president and his "energetic" conduct.

In a subtle way this is thrusting responsibility upon the shoulders of DeBakey. It the Game'), and so on in a similar vein. All is also becoming clear that now a massive media campaign is starting to convince the to visit his wife in hospital, after she had people that all is well with Yeltsin, except undergone a serious operation, more than the minor matter of the timing of the operation twice in two weeks. and that he is still running the country. The doctors appear willing to play this game. nastiest sycophants ever to hang around

agreement with the decision to delay the years his press secretary. He considered it operation. Some Russian as well as Euro- amoral even to hint about any shadow on pean experts claim that it increases the risk the health of his boss. Once, when Ruslan and that in his present precarious condition Khasbulatov, then the speaker of Russian Yeltsin may not survive long enough to Supreme Soviet, made some justifiable benefit from an operation.

his actual physical condition that any precise or sober assessment of it was not possible. He himself contributed to the mystification. For instance, while disclosing that he had a heart ailment requiring operation, he also claimed that the doctors had found it out only recently in the course of medical examination. Moreover, that no help of any kind from foreign doctors was necessary.

as if the Almighty had suddenly revealed all PeBakey's participation in consultations has His secrets. One ecstatic Russian television but paid to it. Nothing wrong with it of

amouncer reacted to the limited frankness of the president so ecstatically as if the apple Newton had fallen on his head. But then his kind of servile journalism has inreasingly become the norm in Moscow. 'eltsin himself, in a snide manner, had hinted hat he was breaking a tradition of secrecy bout personal health practised by former oviet leaders.

But he was telling the truth in his own ay, ie, by telling only a small part of it, iding much more, and pretending to be nore democratic and more patriotic than his mamed predecessors by claiming to trust rdy Russian doctors. All this was clearly lesigned to impress a gullible public. Contrary to Yeltsin, the doctors did not liscover the heart ailment in the course of recent examination. They, and he too, have snown about it for more than a year. For nstance, one brilliant cardiac surgeon, Wikhail Alshibaya, had publicly declared in Pebruary this year that Yeltsin needed an peration (Segodnya, September 25, 1996). But his advice was ignored for political easons. Yeltsin was determined to run for residency again and such an operation might we reduced his re-election chances. Alshibaya bluntly stated that such a patient could die any moment and added "Boris Yeltsin is a high operation risk".

Instead, the public was sought to be fooled by all kinds of inventive reassurances to the prowess in the present weak physical condition in shooting 40 ducks and a wild boar, somehow conjuring up the scene of the rabbit shoot carnage in Jean Renoir's masterpiece La Regle du Jeu ('The Rules of this, while he was not in a fit condition even

 One of the most publicly aggressive and Not all cardiologists, however, are in Yeltsin was Vyacheslav Kostikov, for some comment about it, Kostikov burst out: "The So much disinformation had surrounded insinuation by the speaker about the health of the president testifies to great immorality A Only an outsider [for Russian chauvinists, nationalists and racists, all non-Russian tizens of the country are permanent autsiders - DM], an antipode of the Lussian national idea, could have said this" October 9, 1993). The Kostikov tradition strong very much alive and kicking even now. As for Yeltsin's proud boast that he will This announcement was hailed by some use the services only of Russian doctors,

course. All sick persons are entitled to seek the best medical help they can afford or get and the Russian president should not be denied this. Hundreds and thousands of people from all over the world travel to different countries for treatment and operations, including Russians. The wearisomely false note in all this is the pompous pretence in a nationalist vein that for Yeltsin only things Russian are good enough, while in reality he dresses from head to foot in foreign clothes. One has only to look at his exclusive 'van Laack' German shirts, his ties. his footwear.

Moreover, his admission that an operation was necessary was not purely because of his concern to inform the Russian public. Far more important was the looming visit of the German Chancellor Helmut Kohl, due on September 7. It was no secret that he was partly coming with a mission from the American president Bill Clinton to find out the exact physical condition of Yeltsin in view of all the secrecy surrounding the matter. It would have been rather awkward in the presence of Kohl to pretend that all was really well. The disclosure by Yeltsin was a pre-emptive move before the visit so that the chancellor was not too startled with his poor condition. That the motive and politics of the visit centred around Yeltsin's ill health, came out in the open when a Russian television correspondent asked Kohl point-blank whether upon his return to Germany the chancellor was going to telephone Clinton about his impressions of Yeltsin and was answered in the affirmative. This question and answer was projected in one of the Russian television news bulletins, to establish the real purpose of the visit for Russian viewers.

This concern for Yeltsin's health on the part of the western leaders is rather novel. Indeed, since the beginning of the Chechnya genocide in December 1994, Yeltsin and the American president and vice-president have time and again acted out a grotesque scene from some Gilbert and Sullivan operetta. Prior to the American VIPs' arrival in Moscow, calculated grunting noises are made by their spokespersons in Washington that their bosses will raise the question of Chechnya since the faraway sound of bombing, shelling and screams from inflicted pain and death, even though an internal matter, disturbs their beauty sleep.

But when these same bosses, who normally prate so deafeningly about human rights, are actually in Moscow, they praise the quintessential democrat Yeltsin for everything, his sparkling health, his conducting, dancing and singing and, gratefully licking him all over, go back home unconcernedly wagging their tongues. For instance, after his last visit and meeting with Yeltsin on July 16 at the Barvikha sanatorium on the outskirts of Moscow, vice-president Al Gore stated on

the CBS 'Face the Nation' show that during the meeting Yeltsin "displayed sharpness, quick thinking and concentration. I am not qualified to characterise his physical condition. However, during our conversation he appeared very energetic" (retranslated from Russian). Note the word 'energetic' used by the apologists of Yeltsin. Thus, the visiting VIPs too have been a party to the deception practised about Yeltsin's health. Sickening.

Bill and Helmut, thank heaven, do not constitute the world, not even the whole 'civilised' world. Rather, the world at large is beginning to sense that Russia is a society sick in its very soul. The sickness of Yeltsin, the way it has come about, the way it is being dealt with, all this is also representative of that profound malady.

Politics at the Kremlin level, of course, is nearly paralysed and totally focused on who or what after Yeltsin. It is not at all clear who really runs the country. Everybody speaks or acts in the name of Yeltsin, of course. However, many observers have grave doubts it in fact the attention span of the president is more than 15-30 minutes every day, if that. Again, the Russian authorities dispute this, claiming he is still the decision-maker and that he works long hours.

The concern over his health is felt differently by various streams of the establishment. There are those whose fate is tied to Yeltsin, who dragged him across the length and breadth of the country like a performing bear in the course of the election campaign, regardless of the consequences to his fragile health, to keep him in power for their sake. They are afraid about their own future without him. Of course, it could not have been done without an equal degree of willingness on the part of Yeltsin.

Then there are those who already have some of the levers of power in their hands and hope to use these to acquire political power during his disability or subsequent disappearance from the political arena. Lastly, there are those opposed to him who also hope that his exit from the scene will be to their advantage and they might manage to gain power pushing aside those who at present consider themselves to be his heirapparent. This particularly applies to the communists and their allies. These divisions are not always clear-cut and shade into each other. Neither is the behaviour of various factions consistent. All politics has become a hotchpotch of tear and expectant opportunism.

Incapacity of a ruling leader always creates problems. But in 'civilised' states, according to the Russian definition of the term, there are constitutional provisions, conventions and rules to cope with such situations. The ailing leader resigns and an election is held to choose a new leader, in some cases by the ruling party, in others by

the country. If they are unwilling they ca be compelled by the society. However, i Russia, the present constitution is just a sor of fig-leaf to cover up the naked autocracy of Yeltsin.

Therefore, none of these options are ever being thought of. At any rate not while Yeltsin has a breath left. Instead, there has been prolonged and agonised discussion of a Russian kind about transferring power to prime minister Viktor Chernomyrdin for a few hours, not a spare minute more before the great president is administered anaes thetic on the operation table and not a single minute later than he regains consciousness after the operation is over. It is not at all clear from this who will decide that the patient is fully conscious, the doctors or the patient himself? Such are the slender threads by which the fate of Russia is being made to hang. The whole procedure seems to be designed as if the power was being entrusted to the keeping of an enemy, not to a trusted loyalist.

It was finally decided that this important business will be done in three stages by means of Yeltsin's favourite device, presidential decrees. The first decree has already been signed, to entrust Chernomyrdin with some of the powers of the president now, and all in principle at a later stage when the operation starts. This will require a second decree to be issued just before anaesthetisation. Then will come the third and final decree taking it all back so that Russia can remain extra safe in the immortal hands of Yeltsin. Since the operation has been now put off for a couple of months, all this has become purely theoretical for the time being.

The procedure is fair enough, since it is stipulated in the Russian constitution that the prime minister inherits the presidency if it falls vacant before the end of the term, then within three months fresh elections have to be held for the post. But does it go far enough? For one thing, it shows a ridiculously paranoic and pathetic distrust of Chernomyrdin.

A temporary transfer of power, whether for a few hours, a few days or few weeks is a totally inadequate response to the current grave situation. It is made graver by the pretence on the part of practically everybody in the Yeltsin establishment that he is mentally fully alert and fit and that he will completely recover within a short period of time and be able to deal with the multiple problems facing the country. Only the gullible believe such assertions which are very foolish and dangerous.

Foolish, because it is obvious that the health of Yeltsin has been on the slide and after every recovery the time gaps between slide-backs have tended to be shorter, deterioration faster and steeper. To believe or claim otherwise is a delusion. Aware of

this tendency and fearful of the blame which might be placed on his shoulders if the operation, in case it is done, fails, the surgeon in charge of Yeltsin, Renat Akchurin, has publicly discouraged easy optimism about his quick recovery.

Dangerous, because Yeltsin is not some private person but the head of state, and propagating such a notion is to purposely deceive the public. This will only aggravate the crisis of confidence not only in his capability to rule but also further devalue all the political institutions of the country. The longer this situation continues, the greater will be the damage to the political health of the country, its stability. It is a purely nominal and ultimately rather meaningless style.

It is obvious now that Yeltsin will not recover fully, even if all goes well according to plan, for another 4-5 months at least. Four questions arise from this situation. One, will he ever emerge from his present physical condition to carry out his political duties in full measure? Two, if the president is not cured completely, will the country continue to be ruled by an incapacitated person for another four years? Three, if not, when and how will a changeover take place? Four, eventually who will replace and succeed Yeltsin? There are no answers to be found. Or rather, the answers are there but cannot be implemented.

One supreme solution is self-evident. It is for Yeltsin to resign and hand over power to Chernomyrdin while preparations are made for the election of a new president within three months as stipulated in the constitution. It is equally obvious he will not do so. He does not have the grace of Gorbachov in such matters. Consequently, it is almost certain that during the prolonged indisposition of Yeltsin for months ahead, at least till February next year, there will be political uncertainty and instability.

A few political personalities are hopeful that ultimately his wife Naina and daughter Tatyana, who can sometimes soften his stubbornness, will persuade him to resign voluntarily. If the two ladies could achieve this they will be doing a great service to the country. However, there is little chance that this will happen. Too many factors are against such a development.

The whole history of Yeltsin's sickness, the way it has been handled at a political level, is creating a tragic legacy for the country. Because Yeltsin has ignored many inconvenient democratic procedures during his reign so far, because the people have been again and again misled and deceived about his physical condition, and repeatedly by his extravagant and false promises, democracy as a political institution is thoroughly discredited in their eyes. It has been a peculiarly Yeltsin achievement, and whether he remains or goes, bodes ill for Russia.

## **Understanding Deve Gowda**

**James Manor** 

Deve Gowda's past may turn out to be a poor guide to his premiership, but this account of a number of events tendencies and recurring themes in his career may offer a somewhat clarer notion of what India can expect of the man from Hardanahalli.

DESPITE much comment in the Indian and international press about the background and career of prime minister H D Deve Gowda, our understanding of these things is still rather sketchy. This paper provides a little more detail and substance than has been available so far. It examines a number of events, tendencies and recurring themes in the prime minister's career which may have some bearing on his approach to his current job.

Deve Gowda received a diploma in civil engineering after a year of post-secondary study in the district headquarters town of Hassan in 1952, at the age of 19. He then spent several years farming and working as a highly competent engineering contractor, mainly in and near Holenarsipur taluk, in partnership with a Muslim friend. His involvement in construction projects earned him a reputation within a limited circle as a man who got things done. It also equipped him with analytical skills which would later enable him — both in opposition and in government — to be a formidable analyst of public works project.

During those years, he actively supported the work of the first Congress MLA from Holenarsipur and a minister in the Hanumanthaiya government, the brahmin AG Ramachandra Rao – an impressive and enlightened man whom Deve Gowda came to see as his political guru. His links to Rao and others were occasionally useful in obtaining contracts, but he did not seek office until 1959 or 1960 when he was elected – with AGR Rao's backing and on the Congress ticket – to one of the 14 or so seats on the Holenarsipur Taluk Board.

He was elected from a two-member constituency, and the other successful candidate-like Deve Gowda, a congressman and a member of the locally dominant Vokkaliga community - was one HD Dodde Gowda. He was an advocate who came (importantly, as we shall see) not from Holenarsipur but from Krishnarajanagar taluk in Mysore district. Despite the similarity of names (in Karnataka, the first

wo initials are important), he was no relation of Deve Gowda.

As the 1962 state assembly election pproached, three men sought the Congress icket to challenge Y Veerappa, the Praja ocialist Party (PSP) MLA who had defeated I G R Rao in Holenarsipur in 1957. The tree were Deve Gowda, his colleague on the Taluk Board Dodde Gowda, and one fudde Gowda. Dodde Gowda was uccessful, apparently because his brothern-law was a close associate of Sijalingappa, the once and future chief ainister of the state.

Deve Gowda decided to stand as an independent against Dodde Gowda, and set bout campaigning in the energetic, ainstakingly thorough manner that has lways characterised his political work. He cent to the former MLA, A G R Rao, to sk for his support. Rao said that as a ongressman his hands were tied, but the lea from Deve Gowda appears to have one some way towards neutralising Rao in ne ensuing campaign.

He also went to the PSP leader in Hassan hatrict and asked him to award the ticket or Holenarsipur to the incumbent Veerappa a Lingayat) rather than a promising young /okkaliga, so that the Vokkaliga vote would not be fragmented. Deve Gowda reckoned hat if he could compete only with Dodde Jowda for the support of Vokkaligas who usunumbered Lingayats in the constituency, lestood a good chance of ousting the sitting VLA who had become somewhat unpopular.

When Veerappa was renominated, Deve Jawda went systematically about cultivating figures (especially but not only Vekkaligas) in the constituency, including he young man who had been denied the PP ticket. He went to the extent of mustering 200 Vokkaliga supporters from Holenarsipur in the small hours of the morning outside the Vokkaliga hostel in Hassan where the young man was staying, cappeal for his support. It was duly granted. Deve Gowda then lined up several other fluential supporters for his campaign. This was necessary because, at the time, he was

largely unknown outside a circle of about 10 villages round his home base in Haradanahalli. Vital help came from an ayurvedic doctor who travelled widely by bicycle to treat people and who was much loved across most of the constituency. Deve Gowda and his campaign team concentrated on winning over village headmen who in those days exercised great influence among villagers. A sizeable number of them were at least distantly related to Deve Gowda or one of his close associates.

Deve Gowda and his aides would typically arrange for the leaders of most communities in a village to meet at the local temple. He would then appeal for their support, on two grounds. Despite the fact that most headmen were Vokkalıgas, caste was not an explicit part of his message. He stressed, first, that although he was nominally an independent, he was very much a congressman, so that a vote for him was not an anti-Congress vote. Second, he reminded them that the official Congress candidate, Dodde Gowda, was not from Holenarsipur. (The constituency of the three 'hoblis' or sub-taluk which make-up Holenarsipur taluk, plus Dundaganahalli 'hoblı' in neighbouring Chennarayapatna taluk, but in the latter where the charge against Dodde Gowda as an outsider carried less force - he gained solid support then and subsequently, thanks to the heavy predominance of Vokkaligas there and his assiduous cultivation of them.)

After extensive discussions, he and his associates would then withdraw for 10 minutes or so, to let the village elders reach a decision – which was usually favourable. Then, before the temple, they would pledge their support.

This sort of attention to detail – which has marked his entire career – plus a mere Rs 16,000, mainly contributed by Deve Gowda's relatives, won him a seat in the assembly in the 1962 election.<sup>2</sup> He gained 42 5 per cent of the vote, as against 24.7 per cent for Dodde Gowda and 20.4 per cent for the incumbent Veerappa.<sup>3</sup> He was 29 years old.

Once in the assembly, Deve Gowda nursed his constituency carefully. For opposing a Congress candidate in 1962, he was expelled from the party for six years. But despite this, he developed good personal relations with several leading congressmen – particularly with the Lingayat leader Veerendra Patil who was then public works minister and later chief minister, but also with Patil's patron, S Nijalingappa. This enabled him to succeed as a 'transferring MLA' who got people loyal to him inserted into key

positions in the constituency, it also helped him to obtain numerous tangible benefits from the government for Holenarsipur.

As an MLA and later as an opposition leader and a minister, he proved highly effective. Civil servants who have worked with him consistently say that although he is not well read, he has an uncanny ability to understand the key points in any document or discussion, and to spot the difference between real and imagined problems. He is also adept at anticipating potential difficulties, and at devising approaches that defuse them. His clever management of the Idgah Maidan controversy in Hubli, when he was chief minister, is a well known example.

These skills and his careful development of good political connections enabled him to gain victories - although seldom by large margins - at a succession of subsequent elections. His expulsion from Congress forced him to stand as an independent again in 1967. He won the seat for the Congress(O) in 1972, and for the Janata Party from 1978 onward.4 His successes in 1972 and 1978 were achieved in the teeth of strong statewide support for Indira Gandhi's Congress, then led by Devaraj Urs. Deve Gowda served as leader of the opposition during that period, but despite this and a brief incarceration during the emergency, his personal relations with both Urs and his successor Gundu Rao (as with most political adversaries throughout his career) were always quite cordial.

Deve Gowda's close ties to Lingayat leaders like Veerendra Patil were crucial to his growing importance during the first decade after his election in 1962. This was true partly because Lingayats dominated state-level politics between state's reorganisation in 1956 and the election of Devaraj Urs as chief minister in 1972, but there was more to it than that.

Deve Gowda was a member of the largest and most influential 'jati' within the Vokkalıga jati-cluster, the Gangadıkaras, who account for roughly one-half of all Vokkaligas 5 But he did not come from what is usually seen as the Vokkaliga 'heartland', Mandya district. Because Mandya has prospered economically (thanks in large measure to irrigation and sugar production, and proximity to Bangalore) in ways that Deve Gowda's Hassan district could not. and because Vokkaligas represent a largerproportion of the population in Mandya than in other districts (including Hassan), Vokkaliga politicians from Mandya find it difficult to acknowledge the claims to political pre-eminence within their community of Vokkaliga leaders from other districts. (Deve Gowda's problem was compounded by the hostility that developed between him and the most influential vokkanga pontician during ins early years in politics, K Hanumanthaiya, who came from Bangalore district.)

The attitudes of Vokkaligas in Mandy present Vokkaliga leaders from othe districts with both a problem and a advantage. The problem is that to make the way in state politics, they must forge tie with leaders from other communities—difficult task. Deve Gowda did just this, an by that means, he eventually became the most important Vokkaliga leader is Karnataka. But he was forced to do it, a it were, the hard way.

The advantage is that because they come from districts where Vokkaligas do not predominate to the extent they do in Mandyathey do not acquire the uncompromising approach to non-Vokkaligas that politician from Mandya often exhibit. This was certainly true of Deve Gowda, and requipped him far better than his Mandya counterparts for success in the pluralistic atmosphere of state-wide politics. (It is not accident that the state's four Vokkaliga chief ministers have come not from Mandya, but from Kolar, Bangalore, Shimoga and Hassandistricts.

Consider the diversity of the close relationships that Deve Gowda had developed during his career – with a Muslim business partner, a brahmin political gurd and Lingayat leaders like Veerendra Path (whom some see as a second political gurd

ance A O K Kao, and regaringappa. Consider also the alliances with other caste groups that he had to make, election after election. in his own constituency. Four groups are present in strength in Holenarsipur: Vokkaligas, Lingayats, Kurubas (traditionally, shepherds) and scheduled castes. To win the seat, support from at least two of these groups is essential. The scheduled castes have consistently backed the Congress associated with Indira Gandhi, so Deve Gowda was always compelled to build bridges from his Vokkaliga community to Lingayats or Kurubas or both. He has been building and maintaining mixed social coalitions for over 30 years.

These cosmopolitan experiences prepared him well to adjust to the changing rules of Karnataka politics after 1972, when Devaraj Urs made it necessary for Lingayats and Vokkaligas to share substantial power with other groups, in order to win elections and to remain in power. They may also help him to cope with the greater diversity of people and groups that he inevitably encounters as prime minister.

He is seen to be far more open to coalitions of diverse interests today than he was in 1989 when he broke with the main body of the Janata Dal in Karnataka and tried to gain power as the leader of a party which he could thoroughly dominate. That experiment proved disastrous - he suffered his only defeats in a state assembly election, both in

#### AGRICULTURAL STATISTICAL COMPENDIUM

VOLUME-1: FOODGRAINS - P.C. BANSIL

The Volume comprising 40 chapters spread over 1350 Pages was published in 1992. This publication in two parts brings at one place available tatistical data series relating to foodgrains and allied aspects athe all India and State level since 1950-51. A Supplement to the volume updating the data as at end September, 1996 is underprint. *Disketts are also available*.

Holenarsipur and in Kanakapura in Bangalore district - and it shook Deve Gowda deeply. It gave him a vivid appreciation of the utility of accommodation within broad coalitions of the kind which eventually carried him to power in Bangalore. Having now reached the pinnacle of national politics by similar means, he is unlikely to risk being excessively assertive again.

The abrupt ouster of Ramakrishna Hegde from the Janata Dal might appear to contradict that last statement. But those who know him well believe that this is unlikely to be followed by many similar actions. They attribute it instead to a tendency to remember past slights and, on occasion, to exact retribution against those responsible for them. This sometimes extends to those who have written critically of him in the press, to which he is said to be rather too sensitive.

However, most observers think that the need to maintain a diverse coalition will force him to concentrate more on co-opting adversaries than on confronting them. It should also be noted that this one tough, precipitate action against Hegde may prove useful in intimidating others from becoming too troublesome. This writer's discussions with politicians in Delhi and Bihar in mid-1996 suggested that this was the message which most leaders in the Hindi belt took from that incident.

By all accounts, press reports depicting Deve Gowda as a workaholic, thoroughly preoccupied with politics, are accurate indeed he has always been that way. He has no known recreations. He has never had much interest in sport, drama, dance, music, television or reading. Associates can only recall one occasion when he went to the cinema. He attends social functions as a duty, not for pleasure. Politics consumes nearly all of his waking hours, but it is generally agreed that he enjoys this. As one senior civil servant a ho has seen him at close quarters put it, "he can relax only when he is working, and does not know what to do with himself when he has free time, which is seldom".7 But because he enjoys work, no one who knows him expects his health to suffer under the burden of work as prime minister.

He frequently goes short of sleep, but takes naps on journeys. When he was chief minister, a lieutenant who had an urgent matter to discuss with him was invited to join him as he travelled by car from central Karnataka to Bangalore, but Deve Gowda slept the entire way. He was then asked to accompany him on a further journey down to Mysore, but the same thing happened on that trip, and again on the return leg to Bangalore. The poor man spent the better

part of 24 hours touring the state at Deve Gowda's side without getting a hearing.

Observers also stress the strong reinforcement that he receives from his wife, a quiet woman who is said to have a good understanding of politics, on which she sometimes advises him. This may be important in what can be a lonely job—especially for a prime minister who has few if any political advisors, according even to senior colleagues who are sometimes said to be his advisors. His isolation worries those who saw him construct an exceedingly effective network of informants in every corner of the Karnataka government. They tear that he may be 'flying blind' in Delhi.9

He is also sustained by a healthy lifestyle. He does not drink and gave up smoking years ago. He once ate meat, but when his tather died, he travelled to Kashi where the pandits urged him to give up something he loved as an act of devotion, whereupon he became a vegetarian.

When he first stood for the assembly, Deve Gowda was not an effective speaker - he learned this art later. But he impressed people early on with his willingness to listen, and conveyed the impression that he was a god-fearing man who would keep his word. He subsequently became skilled at using what one close associate describes as "his very melodious voice, a dangerous voice which kindles emotions of people". He also learned "how to weep", and how to use his "beautiful cunning smile" to appear to open his heart to villagers with "devastating effect"10 - especially in small groups where he excels far more than at large public meetings.

What one current associate describes as his "lack of style" before large crowds may actually turn out to have some advantages. It enables him to present himself as a plain man, a leader without frills. 'Plain men' sometimes flourish as leaders of great democracies. Witness the examples of Harry Truman and Helmut Kohl. Critics of the latter claim that he has a vocabulary of only 500 words, but he has been the leading figure in Europe for some time now.

Over the last 15 years or so, as Deve Gowda has been drawn increasingly into high politics at the state and then the national level, his old friends and constituents have seen less of him and found him less responsive than during his early years. They see that this is partly inevitable, but they also express resentment.

One long-standing associate said that "in the old days, he was very accessible to ordinary people. He would sit on the floor and talk with them, but no longer". Others complain that he has increasingly maintained his ties to his base through paid political fixers, some of whom are seen as unsavoury

- one man described them as "political goondas". His (again inevitable) preoccupation with obtaining and distributing political funds has also caused dismay, as has the involvement in this business of a toddy contractor who comes from Holenarsipur but spends most of his time in Bangalore. Some constituents resent his efforts in 1994 to install his son as his successor in Holenarsipur, while Deve Gowda moved to a safe seat in Ramanagaram in the Vokkaliga belt of Bangalore district.

They also complain that his experiences in state politics have made him unable to trust anyone, even though they concede that he has good reason for his suspicions. One particularly searing experience occurred when he was irrigation and public works minister in the Hegde government. The chief minister systematically enticed most of his key lieutenants away from him. As one Deve Gowda supporter put it, "Hegde pruned him beautifully".<sup>11</sup>

Thereafter, Deve Gowda – an indefatigable optimist who looks for opportunities even in extreme misfortune – threw himself more energetically than ever into cultivating backers. But he is seen (rightly or wrongly) to have done so in a more manipulative manner, discarding people who had helped him when they became inconvenient. Some seasoned observers also believe that there are fewer limits than there used to be or ought to be on what he will do to gain relatively modest political advantages.

Even his backers wonder whether his emphasis on frequent one-on-one discussions is appropriate to his new role as prime minister, especially if it is he who constantly calls on others rather than the other way round.

What sort of vision can we expect from this prime minister? The views of those in Karnataka who know him well suggest two answers. They sit incongruously alongside one another, but there may be some truth in both of them. On the one hand, there are critics who say that Deve Gowda tends to focus too much on minutiae, on seeking short-term advantages by forging ties with people in face-to-face dealings. They complain that he therefore "can get lost in pe lestrian concerns". He tends to see the trees rather than the wood, and he focuses on tactical problems at the expense of larger strategic thinking

They allege that this deprives him of vision, and they point to occasions where this has cost him dearly. One instance was the contest for the leadership of the government which was formed in Karnataka in the aftermath of the defeat of Congress in the 1983 state election. Deve Gowda concentrated on lining up MLAs one by one, while his rivals S R Bommai and

especially the ultimate victor Ramakrishna Hegde dwelt more productively on larger strategic approaches. It is unkindly said that Deve Gowda continued to operate too much as he had done when constructing his base in his constituency of Holenarsipur and in Hassan district. It must be stressed, however, that he was probably not in a position to win that contest.

It might also be argued that his focus on matters of detail is precisely what is needed now, when he heads a coalition that is perhaps too diverse to produce much in the way of over-arching themes or vision. It may also be useful in a coalition in which power is more widely dispersed than in any previous national government - among cabinet representatives of regional barons, and among the prime minister's office, the cabinet and the coalition's steering committee.

And while this prime minister has no grand plan informed by ideology - as one ally put it, "he is a doer, not a theoriser or a proclaimer" 13 - he has at least one major preoccupation which may provide his government with an adequate vision. He is intensely committed to helping small farmers, owner-cultivators. Indeed, he hopes to make this and a commitment to agriculture more generally into an issue which cuts across regional, religious and other divisions in India.

It is crucial to recognise that a concern for small farmers means one thing in Karnataka and something else in India more generally. In southern Karnataka from where he comes we find an extremely low incidence of landlessness and a very large number of owner-cultivators. Favouring small farmers there mainly means helping the land-owning groups who are still the dominant upper stratum of village society. In much of India, however, help to small farmers means assistance to non-dominant groups - it implies at least modestly redistributive change rather than the avoidance of it

We also need to understand, despite illinformed claims to the contrary, that the Janata governments in Karnataka in which Deve Gowda served clearly understood the necessity of providing the leaders of disadvantaged groups - the backward classes, Muslims and scheduled castes with positions of real substance. They knew that there was no going back to the Lingayat-Vokkaliga dominance of state politics which had prevailed before the election of Devaraj Urs in 1972.

Deve Gowda clearly internalised this understanding. Note, for example, that when formidable powers and resources were devolved on to zilla parishads in Karnataka in 1987, he saw to it that his district, -

Hassan, was the only one in the state of which the parishad was chaired by a member of the scheduled castes. It also has to be said that he retained great influence over the work of that zilla parishad because his son was a key member of it. But this was not an exercise in mere tokenism. Deve Gowda understands the need to take meaningful action to build broad support among disadvantaged groups, at the same time as he looks after the interests of elites.

All of this adds up to an ambiguous picture, with its fair share of potential problems and promise. Deve Gowda's past may turn out to be a poor guide to his premiership. But this brief account may offer a somewhat clearer notion of what India can expect of the man from Haradanahalli.

#### Notes

[This paper is based on this writer's studies, since 1970, of Karnataka politics, and on interviews with numerous persons in Karnataka who have worked with or closely observed Deve Gowda throughout much or all of his career.]

I it is not clear whether scheduled castes leaders were included. That would not have been unthinkable in Hassan district in that period, given the very low incidence of landlessness and the fact that the scheduled castes formed a large minority of the electorate. On the other hand, a typical Vokkaliga headman at that time would still have expected the scheduled castes to follow

- his advice on how to vote.
- 2 This account is based on an interview with a member of Deve Gowda's 1962 campaign team, Mysore, August 10, 1996.

- 4 Ibid, pp 284-410.
- 5 The cluster and the various 'jatis' (endogamous groups) within it are discussed in more detail in chapter two of J Manor, Political Change in an Indian State: Mysore, 1917-1955 (New Delhi and Canberra, 1977). The endogamous divisions have been eroded somewhat over the years by intermarriage between elite families in different 'jatis'. One of Deve Gowda's own children has married a morasu Vokkaliga, and he has accepted this quite cheerfully.

## Land Market Transactions in Rural Haryana

#### Kailas Sarap

This paper analyses the functioning of the land market as it operates in the rural areas of Haryana on the basis of field survey data. More specifically, the author discusses (a) the inactive nature of the land sale market, (b) the background of sellers and buyers and the sellers' motives for selling land and (c) variation in price per unit of land and the factors affecting it. The discussion, it is hoped, will throw light on the nature and extent of distress sale by farm households and the linkage, if any, of land transactions with the credit market.

LAND market transactions play an important role in the process of economic transformation and especially in the evolution of land ownership structure. Given that land is the basic factor of production in less developed countries, households try to enlarge their size of holding through buying or at least cling to their existing piece of land. In view of this the market for the sale of land in a labour surplus economy may have a tendency to be inactive. This will be more so in a situation where land is the dominant source of livelihood for a majority of the population and there is no alternative and reliable source of employment. The inactive nature of the market for land has drawn the attention of economists and other social scientists (see Raj 1970, Bardhan 1973, 1984, Basu 1986, 1990, Bhaduri 1983, Hill 1986, to mention only a few]. Even with full property rights in land, transactions of cultivable land tend to be rare. Unless forced by extreme circumstances a resident villager does not sell his land [Bardhan 1984]. Rural families evaluate returns from investment in land differently as compared to commercial profit calculation because of their personal valuation of such land [Bhaduri 1983]. In view of this, it is instructive to investigate who sells land to whom and for what reasons and at what price?

The level and changes in land price have a significant bearing on the structure of market competition for farm land. A host of factors including the classes of buyers and sellers, their socio-economic background and motive for selling and buying land will influence the structure and nature of competition on the land market and its role in price formation in this market.

The main objective of this paper is to analyse the functioning of the land market as it operates in rural areas of Haryana based on original field survey data. More specifically the study will discuss: (a) the inactive nature of the land sale market; and (b) the background of sellers and buyers and their motives for selling land. This will help us to know the nature and extent of distress sale by farm households. It will also help us understand the linkage, if any, of land transactions with the credit market. Lastly, the variation in price per unit of land and the factors affecting it will be discussed.

The structure of the paper is as follows: The first section discusses some analytical issues relating to the land market. It will focus on the considerations that explain why land sales are in frequent even if the price of it completely flexible. The second section analyses the empirical evidence, as to who sells to whom; the extent and nature of sale and purchase. The third section will discuss the price variation per unit of land and factors affecting the variation. The last section highlights the major findings of the study.

## Analytical Issues

Several explanations have been put forward as to why land sales are uncommon in less developed countries. One of the explanations is based on the belief that the possession of land enhances the power and prestige of the household [see Raj 1970]. In view of this, farm households would like to hold on to their land and part with it only in conditions of extreme distress.

Others argue that in backward agrarian economies there are few alternative investment opportunities outside of land and the capital markets are underdeveloped [Binswanger and Rosenzweig 1986, Platteau 1990]. Hence there is strong preference for land by the landowners. Many will like to buy land because it is a relatively secure and marketable form of wealth in a highly uncertain environment [Platteau 1990, Hill 1986]. In such a situation farm land becomes a reliable store of wealth and the reluctance on the part of the households to sell is understandable. Further, it ensures that the probability of loss in such assets does not exceed certain special limits [Sen 1981]. Similarly, given the presence of considerable risks - production and price risks - as well as risk of loss or damage to non-land productive assets [Ellis 1988:199] farm households will try to keep their saving in the form of land rather than in that of other assets/risky ventures [Bardhan 1973:1385]. As a result it is alleged that the turnover of the sale of land will be lower. This also suggests that there may be excess demand for land. However, the demand for land cannot be satisfied through borrowing given the credit market imperfections.

In the credit market loan is usually advanced on the basis of collateral that the borrower possesses. In such a situation it would be difficult for a collateral poor household to acquire land by borrowing funds.<sup>3</sup> As such land purchase will be largely out of self-generated saving [Binswanger and Rosenzweig 1986, Platteau 1990]. Of course, a farm household can supplement the funds through other income and/or from borrowing in the informal credit market.

On the supply side sellers of land would only be better oft if they could earn a bigger return from the proceeds of the land sale than from self-cultivation or land rental. The supply of land or sale will be small or inactive where non-agricultural investment opportunities for rural residents are limited and credit markets are underdeveloped [Binswanger and Rosenzweig 1986].

On the demand side the number of bidders for land will be influenced by the level of self-generated savings. In such a situation only farm households with own surplus would succeed in bidding for land. Moreover, households which can manage a part of the amount from their friends and relatives on easy terms and conditions and in time [Sarap 1991b] are more likely to succeed in purchasing land. For such households, land is a luxury good that provides social prestige and political influence [Platteau 1990].

The poor are concerned more than the rich with land holding as a relatively secure form of wealth and of retaining their traditional source of livelihood [Bhaduri 1983:71]. A poor farmer does not want ins means of Invelided to become a part of the exchange economy because of his high personal valuation of land he owns 5 As a consequence, the poor are strongly reluctant to part with their land unless they are forced to do so under distress conditions [Bharadwaj 1985]. In such a situation, the land prices do not teflect fully the risk in parting with land as valuated by the farmer on the margin of subsistence, even though buyers may offer 'good' price. Small owners are not willing o take the plunge and to invest the proceeds n some alternative risky venture [Bardhan 1973:1385].

Similarly, the poor are not in a position of purchase land or to buy it again once they

have lost it because of credit market imperfections [Platteau 1990]. Thus, it appears that the demand for land would be confined to those households with own surplus or with access to credit market [Binswanger and Rosenzweig 1986]. As a result there would be a tendency for land to accumulate in the hands of persons with greater production endowments including managerial skill, family labour, farm assets and other sources of income.

Since from the supplier's point of view the ownership of land enhances the power and prestige of the households, it would further reduce the tendency for sale of land [Hill 1986:53]. As a result land will always be in excess of supply in the normal situation, and there will be low turnover in the land market. But as Basu (1986, 1990) has pointed out all these above arguments suggest why price of a unit of land will be high but do not provide any explanation for the low turnover in the land market.

Basu has given an alternative explanation for the mactive market for land sale. According to him an owner of a piece of land will hesitate to sell his land because he is not sure of the fact that he will be in a position to buy back the same price of land [Basu 1990:32]. From the sellers' point of view, it is an important consideration because usually when a seller parts with a piece of land, he intends it to be an "interim" sale. An interim sale<sup>6</sup> is one where the seller intends to buy back the same commodity in the near future. For instance, a household may sell a piece of land to buy another piece of land or to mortgage it for mobilising fund quickly in the informal credit market to buy a piece of land. A situation in which the mortgager may transfer the temporary ownership of land a second or third time to different persons without selling it may reinforce the intention of interim sale.7

In general one would expect two types of supply of land These are: (i) regular supply; and (ii) interim supply. A regular supply is that in which the seller sells a piece of land once and for all. This is the case in which the seller does so because he has no interest in cultivation any more<sup>8</sup> or has discovered some alternative source of investment which is more lucrative than the possession of the land. One explanation put forward in such case is that of childless housenolds. A farm household, without any child may like to sell his land gradually during his lifetime thinking that there is no one to inherit his owned land In case of household with daughters only, the daughter after her marriage may sell the land in case it is not near to her husband's village. This is because the transaction cost of enforcement of her right on the land, after the death of her parents, will be very high

The regular supply of land may be low ir a situation where the migration to urban are:

is low. Similarly, given the uncertainty of information and imperfections in the capital market, the alternative channel of investment is either low or risky [Binswanger and Rosenzweig 1986]. In such a situation one would expect the regular supply of land to be low.

Given the fact that land is the most stable torm of asset and has collateral value [Binswanger and Rosenzweig 1986, Sarap 1987, 1991b, Hill 1986:153] households may utilise the piece of land for obtaining credit by mortgaging it with the creditor. In such a case they have to transfer the ownership right temporarily to the creditor. The intention of the mortgager is to get back the piece of land as soon as possible by repaying the loan.

#### COMPONENTS OF SUPPLY AND LAND

It is instructive to know the components of regular supply of land. Three situations have been visualised by Basu [Basu 1990:35]. These are:

- (a) if the probability of being able to buy back land is high,
- (b) if the preference of the household for holding wealth as land is low,
- (c) if the need for liquidity is very high and there is no alternative source of funds including borrowing. Then a person may be forced to sell his land. Even in the case of (C) he may try to manage liquidity by resorting to mortgage with the hope of recovering the piece of land.

Another explanation put forward for the infrequency of sale of land is in terms of property rights in land [Guha 1987]. Ownership means the possession of a bundle of rights. This means that the nature of property right could vary across societies and time depending on what constitutes the relevant bundle of rights [Basu 1990]. Certain kinds of property rights institutions

could create obstacles for the rapid exchange and transaction in land. For instance, Guha (1987) has found that in Maharashtra there was a greater sense of community ownership in land. Land sale required consent of the community. In such a situation there would be a tendency towards the status quo and low frequency of sale of land is natural.

In rural community where the caste and community bonds are very high [Hayami and Kikuchi 1981, Rudra 1982] such factors may enhance the reluctance for the sale of land. Further, for instance, the relative or friend of a seller may challenge the act of selling by claiming that he is a co-sharer of the piece of land. Otherwise he may persuade the seller not to do so as it may lead to legal complications. 10 Such factors may work as a deterrent for the potential buyer of the land. Similarly, some other form of property right restrictions could affect the turnover of the land. One has to probe the impact of different types of property right institutions on the land market.

Asymmetry of information in the rural community may be yet another explanation for the low turnover in the land market. This may also affect the price to be paid by the buyers. For instance, an outside buyer may pay a higher price for a piece of land because of lack of information about the land and the nature of competition among the local buyers.11 But as Bardhan has pointed out the rural residents accumulate all sorts of information concerning the villagers [Bardhan 1979, 1983] so that any delinquent behaviour on the part of a household vis-a-vis others relating to any transaction is quickly transmitted to the relevant parties [Platteau and Abraham 1987]. As such a local resident may not find it difficult to obtain information. But if the transaction between a seller and buyer is secret then the price in such transaction may be different

Note: Figures in brackets represent percentage of the group to the total sellers Source: Field Survey.

as compared to a normal situation. In such a case an outside buyer may have to pay a higher price. The seller may try to have a secret dealing with a buyer outside his caste community/outside the village in case he feels that the price he will realise by selling a piece of land to his relative/caste fellow may be low.

On the whole it appears that the low turnover in the land sale market may be due to a variety of factors, including the perception of the household that the possibility of buying back a piece of land is low and the higher personal valuation on the piece of land, since land is the dominant source of livelihood. With the above theoretical background the empirical situation in the land market is discussed in the next section. Before that the nature of data and the study area are discussed briefly.

#### II Empirical Evidence

The study is based on primary data collected personally by me with the help of three of my postgraduate students who were also residents of the selected villages. The data relate to the sale, purchase and mortgage of agricultural land in three different villages; one village each in the district of Rewari, Rohtak and Sonepat. For getting authentic information on land sale we relied mainly on the sellers, for they had little reason for concealing the amount of money actually received by selling the land. For other information including the quality, location and use of land it has been cross checked from the respective buyers. Whenever the actual sellers could not be contacted, having either died or left the village, we interviewed the respective buyers and/or witnesses in the transactions wherever possible, and cross checked the information from other knowledgeable persons in the villages. From the mutation registers of the villages and informal discussion with elderly knowledgeable persons, the names of the sellers and buyers who have transacted land during

Repeated visits were made to the villages to contact the buyers and sellers. In each village the major portion of the information was collected by the person who had resided in the village and was well known to the villagers.

The data consist of information on sale and purchase of land made by families in the villages over the period 1960-61 to 1990-91. Information on the number of sales, area sold in each transaction, price received per unit of land, quality and location of the plots, status of families involved in buying and selling and the reason thereof, occupation, castes, source of finance for buying land and other related aspects were collected during the year 1991-92. In certain transactions the settlers have migrated to nearby towns or other places. In such cases we could contact some such households in nearby towns. In case of others, who migrated to distant places but have connection with their caste groups or friends inside the village, we contacted such households and collected related information from them. This information was supplemented with that provided by the

There were 68 households who had sold land during the study period. The number of buyers were 90. In case of mortgage it related to the land which are already with the landlords to whom the mortgagers have temporarily transferred the land. There were 52 households with 58 transactions who have resorted to mortgage during the period of study. <sup>12</sup>

#### CHARACTERISTICS OF LAND TRANSACTIONS

The transactions in the land market were few in the study area during the entire period. About 68 resident households, <sup>13</sup> forming 8.55 per cent of the total farm households in the sample villages, reported sale transactions. The amount of land sold by the households was 255.62 acres, forming 8.19 per cent of the total area sown in the sample villages in 1990-91. In all 162 plots were sold during

per cent were marginal farmers, <sup>14</sup> 30.88 per cent were small farmers, 30.88 per cent were medium farmers. On the other hand, 10.92 sellers were very large farmers. The land involved in such sale transactions as a proportion of the total land owned in each group of farmers were 43.83 per cent, 34.93 per cent, 31.06 per cent, 24.95 per cent and 28.64 per cent among the marginal, small, medium, large and very large farmers, respectively. About 32.35 per cent of the sellers had sold land more than once in the entire period. On an average 5.23 plots were sold per year.

Clearly land sale transactions were indeed in the nature of less frequent events at the level of farm households in the study area supporting the argument that the turnover of the sale of land is very low [Bardhan 1984, Basu 1986, 1990, Bhaduri 1983, Platteau 1990, Raj 1990, Rao 1972].

Ninety local residents forming 11.32 per cent of total farm households in the sample villages have reported purchase transactions over the entire period. Of the total buyers, 30 per cent had land holdings up to 2.50 acre; 32.22 per cent had up to 5.00 acres. By contrast it was hardly 2.22 per cent of the buyers who had land above 20 acres. Only six households (6.67 per cent of the total buyers) have purchased land more than once. The amount of land purchased by the total buyers was 310.69 acres during the entire period<sup>15</sup> forming 9.96 per cent of the total sown area.

Clearly the buying of land is also infrequent and is a rare event on the part of the farm households.

Hardly five households were both buyers and sellers during the entire period. Thus, the group of households selling land was different from that of buying land. In view of this, it is desirable to know the characteristics of sellers and the reasons for sale; the background of buyers and the sources of finance for the purchase of land. An analysis of sellers will help us to know the

Include purchase of another piece of land.

components of sellers and the nature of distress sale. On the other hand, an analysis of buyers will help us to probe the connection between credit and land purchase. We begin with the characteristics of sellers and the nature of sale, both, regular and interim (mortgage) are analysed below.

#### CHARACTERISTICS OF SELLERS

A person, who cannot manage his expenditure from his current income and has no alternative source of borrowing, may resort to interim sale (mortgage) of a piece of land. If it is not possible or if the amount that can be obtained from this is inadequate he may have to sell a piece of land. 17 Besides, a household who has no interest in agriculture any more, because of his intention to migrate to town and to start nonagricultural activities, may also like to sell his land. Some households, with large landholdings that is unmanageable given their human resources, or surplus land as per the law of the state, may like to sell a part of their land. Further, a person without children may have less interest in retaining land. In such a situation he may dispose of a part of land during his old age as it is difficult to manage large landholding through hired labour. 18 In case of a man with daughters only, the inheritance of the property goes to the daughters. After the marriage. the daughter may like to sell her land if it is not near to her husband's land/village. Lastly, some persons who cannot repay the debt out of their current income may have to sell a piece of land to obtain fund for the purposes. In such cases the person has no choice but to sell land and the phenomenon may be described as forced selling. The reasons mentioned for selling of land by different households in the sample are given below. They are as follows.

- migration to town.
- to satisfy bare consumption needs.
- to repay the debt, formal or informal
- to meet the marriage expenditure of a daughter.
- to mobilise fund for (new) non-agricultual activity.
- to meet conscpicuous consumption.
- to dispose off surplus land (in case of those households with very large holding).
- the household head has no children or only a daughter and the daughter after her marriage disposes of her land inherited from her father.
- to mobilise funds to buy another piece of land which may be better/near to he household's plot/near the village.

The area owned after the sale transact on by each group can be seen in Table 1. Clearly the marginal and small farmers had to part with a substantial amount of land due to sale;

and are left with small landholding. The amount of crops that can be produced from the piece of land will be very inadequate, affecting the livelihood pattern of these households. In fact, these households have become poorer after the sale and in most cases the selling of the land was involuntary. As such these sales are distress sale [Bharadwaj 1985, Binswanger and Rosenzweig 1986]. By contrast the reduction of average size of landownership for medium, large and very large farmers may not affect adversely their livelihood patterns. Most of these transactions are voluntary in the sense that the households have sold the land for mobilising fund for purposes where the demand is not inelastic. This is analysed below in detail.

#### REASONS FOR SALE

The reason for sale of each plot and the area involved in each case by different categories of farmers are given in Table 2. The marginal and small farmers have disposed of the land mostly for mobilising fund for purposes where the demand for fund is inelastic and urgent. It may be for bare consumption needs, or repayment of informal debt or marriage of a daughter. On the other hand, the large and very large farmers have sold the land for mobilising fund where the demand is not inelastic. and the choice was in an important sense voluntary. The reasons for sale varied from disposing surplus land, diversification of production, activity by starting nonagricultural business, house construction to payment of dowry to their daughters and conspicuous consumption [Cain 1981].

Clearly the poorer farmers had no choice but to sell their tiny pieces of land to satisfy the demand for fund which was lump sum as compared to their total income from the land or other sources. It was also time bound so that they could not postpone the decision to sell. As such these are mostly distress sales [as argued by Basu 1986, Binswanger and Rosenzweig 1986, Bharadwaj 1985, and Platteau 1990].

The evidence provided in Table 2 also supported another proposition, as has been

stressed by Basu (1986), that distress sale is an amorphous category. Even if the purpose of sale of land is the same (for instance, marriage of a daughter in our study area, for two households) each household will be affected differently depending on the initial endowment of resources. The land ownership and the livelihood pattern of large and very large farmers will not be affected much after the sale of land which was due to marriage/ expenses or the payment of dowry for daughters. Moreover the sale of land in such cases is voluntary and it is some sort of luxurious consumption. As such a sale transaction can be categorised as a distress sale only if the livelihood pattern of the household is affected adversely after the sale [Basu 1986].

#### MORTGAGE

As mentioned earlier, many households resort to mortgage of land in order to mobilise fund for a variety of purposes. The intention of the seller in such transaction is to recover the piece of land. Land mortgaged by different groups of households and which are still pending with the lenders are shown in Table 3. It is evident that mortgage of land is more among the small and medium farmers, followed by marginal farmers. It was negligible among the large and very large farmers as these households have no problem to mobilise funds besides their own surplus [Sarap 1990b].

The percentage of area mortgaged to total area owned was substantial in the case of marginal and small farmers. It decreases with the increase in the status of farmers. The purposes of mortgage in different categories of farm households are shown in Table 4. It is clear that marriage of daughter and repayment of informal debt are two most important reasons for mortgage in the case of marginal farmers. The proportion of mortgage for these purposes decreased with the increase in the status of farmers; it was nil in the case of very large farmers. Clearly the poorer farmers have resorted to mortgage in order to avoid selling their land once and for all.

#### COMPONENTS OF LAND SUPPLY

The evidence presented in Tables 2 and 4 together provide the components of regular sale and mortgage resorted to by farm households. Given that land is the dominating source of livelihood for household, he will try to resort to mortgage for mobilising fund in case the demand for it is inflexible and there is no other collateral for getting loan. He does so to save the piece of land from selling it once and for all. For instance, of the total number of plots mortgaged (58) and temporarily transferred to the landlords, hardly 5 (8.62 per cent of the total) plots were sold either to the creditor or others. Of these four belonged to marginal and small farmers. These households had to sell those plots because of heavy burden of informal debt. As such this is a distress category and cannot be a regular supply. The components of regular supply were the sale of land due to migration. The sale of land for mobilising fund to start new non-agricultural activity is a recent phenomenon and may also constitute a regular component of supply. Of course, the latter is small and uncertain. Sale of land by childless household becomes another small component of regular supply. Thus, the amount of regular supply of land will undergo changes depending on the diversification of activities of the household. In that situation he can manage with lower size of landholding in lieu of other income generating activity. Of course it is uncertain and failure of business may force the household to go back to cultivation. Farmers have resorted to sale for a variety of reasons (Table 2). But these are infrequent and irregular and as such do not constitute as regular supply of land.

#### CHARACTERISTICS OF BUYERS

In the study area there were 90 buyers who have purchased and during the entire period of our study (Table 5). Of these the marginal and small farmers constitute 62.22 per cent of the total buyers. On the contrary, the large and very large farmers form about 13.33 per cent of the buyers. The proportion of area purchased as compared to total land owned has increased substantially in the case of marginal and small farmers followed by medium, large and very large farmers. The proportion of area purchased to area owned \* decreases systematically with the increase in the size of holding. The average size of land owned has gone up after the purchase in all the groups, even though the proportion is more in the case of marginal and small I farmers. Apparently this evidence is contrary to the theoretical expectations that land purchase is more among the richer households as compared to the poorer ones. But this apparent contradiction of empirical evidence will be clear once the source to

finance and the status of buyers in the sample is taken into consideration.

#### Sources of Funds for Land Purchase

Sources of fund utilised for the purchase of land have been given in Table 6. Farming<sup>19</sup> as the single source of fund is found only in the case of few households, especially among the large farmers. Only one small

farmer has purchased land exclusively fron own saving from cultivation.

Six farm households (6.67 per cent) have sold land to arrange fund to purchase land. There are households that had land in othe villages inherited by virtue of their marriage to the girls who have no brothers. Of these two households were medium farmers and three belonged to large farmer households.

Source: Field survey.

Two households had sole plots which were situated in a distant place and purchased land near to their own plots. On the whole the financing of land purchase through land sale is limited. It is a sort of consolidation of plots for the households. Further, the inheritace of land by daughters and selling it after their marriage to purchase new plots is also limited in the sample.

Income from service is an important source of fund for many households especially among the small and medium farmers. 75 per cent of the total (28) transactions relating to marginal farm buyers and 58.62 per cent of the total (29) transactions in the case of small farmers have utilised service income for financing land purchase. It was 45.45 per cent of total land transactions (22) in the case of medium farmers. The income from service has originated from those households who have retired from military, police or the buyers themselves or their children are working in the service sector.<sup>20</sup> Converting income from service source into landed property is not only a hedge against inflation as argued by Platteau (1990) and Hills (1986), it is also converting unstable income into a stable form of property in the rural area [Sen 1981].

Borrowing in the informal credit market especially from friends and relatives is another important source of fund utilised for land purchase. For instance, about 29.82 per cent of land transactions of households with landholdings up to 5 acres have utilised informal borrowing as a source for land purchase. It was 22.72 per cent in the case of medium farmers. On the whole in about 28.88 per cent of the total plots purchased by households informal borrowing was used for financing land purchase in the study area during the entire periods.<sup>21</sup>

Clearly informal loan is an important source of finance for those households who can get it for land purchase. Since obtaining credit in the informal market is dependent on the amount of capital a household can provide, it is those households who are more creditworthy that can get more loan. In such a situation households without collateral will have less access to this source [Eswaran and Kotwal 1986, Sarap 1991a]. It is evident from Table 6 that marginal farmers have utilised least this source for financing land purchase possibly because of their lack of access to informal credit.

It is noteworthy that no household has utilised formal source of credit to finance land purchase even if there is provision for it. It is due to lack of syncrhonisation of the time for getting long-term loan which takes lot of time for the sanction of loan [Sarap 1991a] and the time for negotiation of the seller and buyer. Thus the formal creat market has not played any role in lard purchase even in an agriculturally developed area like the study area.

Clearly the credit market imperfection is a constraint for many farm households to finance land purchase in the rural area [Binswanger and Rosenzweig 1986, Platteau 1990]. In such imperfect credit market, households with collateral and/or creditworthiness can manage credit at easy terms and conditions and in time so that they can utilise it for land purchase whenever a seller offers a piece of land for sale. On the other hand, poorer households who have no access to such credit have been excluded from utilising this source. As such households which can easily manage a credit quickly will have an advantage in purchasing land when it is offered for sale.

Lastly our evidence revealed that the purchase of land by traders and moneylenders were negligible in the study area in recent years.<sup>22</sup> Hardly five buyers (5.56 per cent of the total) had background of trader/money lenders.

Clearly households with higher resource endowment (both educational and material), and access to informal credit had advantage in the purchase of land in the study area [Binswanger and Rosenzweig 1986].

On the whole it is clear that the turnover of land sale in the study area is very low. Farm households, whose main source of livelihood are cultivation sparingly resort to sale of land either once for all or mortgage temporarily, unless the demand for fund is inelastic and the amount required is lump sum.

Though the aggregate volume of sales has been low, households have sold land due to a variety of reasons. In the case of marginal and small farmers the sale was mostly involuntary and as such these sale transactions were distress sale. After the sale transaction the average land size of such households has been reduced substantially which would affect their livelihood pattern. On the other hand, the sale transactions of medium and large farmers were mostly voluntary and the average size of landholding has not been reduced significantly. Moreover the reasons for sale of land in such households were not for bare consumption or such urgent purpose where the demand for fund was inelastic. Since these households could manage to finance even lump sum expenditure from their own surplus fund or through borrowing in the credit market, both, formal and informal, on easy terms [Sarap 1987, 1991a], they could sell the land with higher bargaining power and in their own terms and conditions. Clearly land sale for these households were mostly to dispose of the surplus alnd or for luxurious consumption [Basu 1986, Cain 1981] including giving dowry for their daughters and to diversify their economic activities. Our findings showed that even if the purpose of sale was same for different households it was only the marginal and small farmers who were adversely affected in such land sale. And such cases were distress sale because it would reduce the amount of income for them substantially. On the other hand, the landholding size of large farmers even though reduced, their livelihood pattern has not been affected much.

The evidence relating to the purpose of sale and mortgage of land revealed, both, the regular and temporary components of land supply. Households in short of fund and where the demand for it was inelastic, first resorted to interim sale in order to save their tiny pieces of land from selling once for all. In case it was not possible to obtain fund, they had to sell it. Such behaviour was found among the poorer farmers. The sale of land in such cases cannot constitute regular supply. Househods who had no interest in agriculture had migrated to town by disposing of their land. It was one of the components of regular supply of land. Further, in the study area, some households have started diversifying their productive activities besides the agriculture. In such cases they mobilised fund by selling land. Of late it has become a component of regular supply even though it is an uncertain one and its contribution to regular supply is low.

The findings on the characteristics of buyers revealed that there is a distinct group of households who have been in a position to buy land in the study area. These are the households who have non-agricultural income and could borrow in the informal credit market. Households with higher resources endowment both material and

educational and with higher creditworthiness could manage fund for financing land purchase [Binswanger and Rosenzweig 1986] Clearly the imperfection of the credit market could have helped the collateral rich households to manage finance for land purchase. On the other hand, the collateral poor housel bits who were also poor could not be in a position to mobilise fund for such activity. Thus the credit market imperfection prevented them from getting opportunity in the purchase of land. Clearly the credit market imperfection is reflected in the land market as argued by Platteau (1990).

## III Land Price and Variation in It

Inc price of a unit of land is influenced by a number of factors including site characteristics location time potentiality of laid use and he competition among the buyer and seller. There may be considerable variation in the price of land. This has been discussed in detail later. Let us first examine the average price paid per acre of land and its variations.

The iverage current price per acre varied from Rs 2 017 in the year 1960 to Rs 1 25 lakh during the year 1989. In 1960-61 price the minimum price was Rs 1 963 in the Jean

1964 and the maximum price was Rs 10,770 in the year 1972. Similarly the area sold wa minimum (1.08 acres) in the year 1986, and maximum (6.34 acres) in the year 1964. The variation in price and area has been shown in the Graph. Price per unit was low and stable during 1960s. Then it rose at a moderately high rate up to late 1970s with sharp fluctuation. There was rise in price again after mid-1980s. Contrarily the area sold per year has been falling systematically over the entire period of our study with wide fluctuations after early 1970s.

The rising price of land during the 1970s was possibly due to the impact of green revolution (Shergil 1986) Further, the diversification of village economy had also its impact on land price. The rise in the income. from agriculture and non agriculture sectors has rused the attendant demand on the land market Moreover the intervention of the state through the provision of infrastructure and public utilities including hospital roads, bus stops etc. have generated demand for land located near suitable location. As such the price of land has been rising at a more steeper rate during the 1980s as compared to 1970s and 1960s (Graph 1) The wide dispersion of price per acre of land and the reasons contributing for it is discussed below

THEOPHICAL CONSIDERATION OF LAND PRICE

This section tries to draw out the quantitative and qualitative insights into the determinants of land value which emerges from this empirical study

The agricultural land market is not a perfect one but neither is it a capricious one. The market is imperfect because some of the conditions necessary for perfect competition are not always present. For instance, parcels of land are not always the same. They are differentiated in terms of location, size, shape and other characteristics Secondly, the number of buyers and sellers are not always large Third, there may be incomplete information about the land market since transactions are infrequent and transaction costs can be substantial. Although the land market in the study area is not perfect it is assumed that it is fairly a rationale one [Rao 19721

Theoretical literature on the price of land identifies three sets of factors which influence the geographic and temporal variance of land prices. These factors are (a) factors linked to the nature of the site, (b) factors associated with the relative location and accessibility of each plot, and (c) external factors, for instance, the time of sale and

purchase which serves as a proxy for series of variables that influence the dynamic of land price [Ricardo 1921, Alonso 1964, Clark 1973, to mention a few]. These factors are discussed below.

Site

Site characteristics include the quality of land and its topography, the size of plot offered for sale. The quality of land and its physical characteristics influence the type of crops to be grown and their yields and thus determine a dimension of the value of land. The plots which were deemed to be the best quality, and hence the most expensive, were those which were fertile, irrigated and suited to irrigated and high valued crops. On the contrary, the least desirable plots were sandy and suitable for inferior or low valued crops. The sets of land characteristics that may affect the productivity and hence prices are as follows.

#### NATURAL ATTRIBUTE: SOIL TYPE

It is expected that the price of land will be positively associated with fertile land and negatively associated with sandy land. In our sample 49.38 per cent of plots were fertile land and 50.62 per cent of plots were sandy land. Similarly, land with irrigation lacility is more productive hence its price will be high as compared to dry land. 51.23 per cent of plots were irrigated and received water from various sources.

Size of Plot

The size of plot is also correlated with its price. There is a fixed cost for each selling and buying transaction, which is invariant with respect to plot size [Binswanger and Silleers 1983]. A possible reason for this is that most of the transaction cost such as information gathering relating to finding potential buyer or seller, negotiation between buyer and seller, obtaining certified copy of the plot from the land revenue authority. registration of the plot with the registration office, cost incurred for taking witnesses during the execution of the registration deeds, etc, are fixed cost and are not dependent on the size of plot. As such the price per unit of land will be inversely correlated with the size of plot.

Location and Transportation

This relates to location in relation to buyer's site; potential non-agricultural use and the distance to reach the plot. Buying a plot in the vicinity of the buyer's land would establish territorial contiguity of the plot. This will also reduce the transaction cost of the buyer in terms of supervision cost for enforcing the security of crops, and reduce time for moving the agricultural implements (tractors and other machines) for cultivation and collection of crops after its maturity. As such the buyer will save transaction cost of transportation and travel time, etc. Thus, favourable location reduces the cost of cultivation by increasing

the farm gate price of output and by reducing the effective costs of inputs.

Similarly, if the plot is situated nearby the village, the household will save travel time from transportation of inputs and output. Besides the cost of enforcement of security of crops from theft will also be reduced. Thus, the price of a land will be high if it is situated near a village. In our sample 40.12 per cent of the plots were situated near the village and 30.86 per cent of plot purchased were near the buyers land.

Further, if the plot is located near a road side or in such a place which is suitable for immediate non-agricultural use then the potential intensity of land use will go up and hence its price will be high. But if the quality of such land is barren, dry and has no immediate use for non-agricultural purpose its price may be low. In our sample 36.42 per cent of plots were suitable for non-agricultural use.

External factor related to time of sale and purchase. This serves as aproxy for a series of variables that influence the dynamics of land price. In our sample we have plots which were sold from 1960 to 1991, 1 e, for a period of 32 years.

#### METHODOLOGY FOR ESTIMATION OF LAND VALUE

The conceptual approach of this study is like that use by Griliches (1971) in the estimation of implicit or hedonic prices. The empirical approach of this model is to regress the price of different varieties or models of a commodity as a measure of a bundle of characteristics of dimensions of a commodity. In the present case the land prices (shadow prices) are computed using the coefficients estimated by means of a regression of land prices on land characteristics [Griliches 1971]. The model assumes that the price per acre is an additive function of its characteristics. The equations that are estimated are reduced form of equations that summarise the influences of demand forces and the supply forces on land value as demand and supply jointly determine the price of land.

The data consists of actual sale of plots of land in the sample villages between the period 1960 to 1991, it consists of 162 plots which included the plots sold by local residents as well as households who have migrated to town or other villages.

#### VARIABLES

Dependent variable: The average price per acre of land during the period was Rs 40,440 with a standard deviation of 59,741.22 in current price. It was Rs 6,177.39 in constant price (1960-61 price) with a standard deviation of 3,025.30.

Explanatory variables. The size of plot in acre  $(x_1)$ . The average size of plot was 2.4855 acres with a standard deviation of 2.4012. The following are the dummy variables

which take on the value I when the land fits a certain characteristics and the value 0, otherwise. The characteristic described by each of the variables is as follows:

 $x_2 = 1$  If the land is irrigated, 0 otherwise.

 $x_3 = 1$  if the land is fertile, 0 otherwise.

 $x_4 = 1$  If the land is not useful for crop purpose, 0 otherwise.

x<sub>5</sub> = 1 If the land is situated near to the village, 0 otherwise.

x<sub>6</sub> = 1 If the land is situated near to the buyer's plot, 0 otherwise.

T = It varies from 1 to 32 beginning from 1960.

#### EMPIRICAL RESULTS

The results of the regression analysis have been shown in Table 7. All the coefficients of the explanatory variables except one have the expected sign. The coefficient of five of these are significant at the 95 per cent confidence level or above. The coefficient of the variable land size has a negative sign. As expected with an increase in size of land the price per acre decreases. Similarly, coefficient of the variable irrigation has positive sign. As such the price per unit of land with irrigation facility will be high as compared to dry land. The coefficient of the variable fertility has expected positive sign. The price of fertile land is high as compared to non-fertile land. Moreover the coefficients of variables village and time have expected positive signs. The plot of land situated near the village will become higher compared to land situated elsewhere. The coefficient of the variable time is positive and highly significant statistically implying that land price has rose with the passage of time. The coefficient of the variable non-crop use of land has a negative sign and it is statistically significant. It is due to the fact that these plots are basically dry and barren land which have no immediate non-agricultural use. As such these plots have lower value. The negative sign of the coefficient near the buyer's land was not expected. In any case the coefficient is not statistically significant. The explanatory variables together explain about 70 per cent of the price variance and as such it is a good fit. The regression results confirm that land with irrigation facilities, high fertility, located near the village carries higher price as compared to dry, barren and land located at distant place from the village.

#### IV Conclusions

The preceding analysis of land transactions in the study area confirms that the turnover of land sale is low as argued by a number of authors including Basu (1986), Platteau (1990), Raj (1990) and Binswanger and Rosenzweig (1986). It is noteworthy that even in a dynamic rural area like the study area, with diversified occupation and modern

technology, the turnover of land sale is low. The same observation applies to land purchase transactions. The later are somewhat more important as compared to the former; because migrants, who have no interest in land, have sold their land and left the village.

Two categories of sales, namely, interim (mortgage) and regular, were found in the study area. The frequency of mortgage has been declining of late. A variety of reasons have led to the sale of land once for all. In the case of poorer farmers, land sale were mostly involuntary in nature; given an inelastic demand for fund. These households had no choice but to sell their land. In such transactions they had to part away more than two-fifths of their landholdings. By contrast, the sale transactions of the medium and large farmers were voluntary in nature and the demand for fund was elastic. The main reasons for sale included luxurious consumption, diversification of productive activities and disposing of surplus land [Coin 1981].

The analysis of the reasons for sale by different groups of households revealed the amorphous nature of distress sale. Even if the purpose of sale of land was same for more than one group of households, it was only in the case of marginal and small farmers that their livelihood pattern affected adversely after the sale transactions. Moreover these transactions were involuntary. As such a transaction to be distress sale has to satisfy two conditions; namely, that the sale is involuntary and the livelihood pattern of seller is to be affected adversely. It was only in the case of poor farmers these two conditions were satisfied. Conversely the sale of land by the richer farmers to meet the dowry needs of their daughters and conspicuous consumption were not distress sale.

Sale of land due to migration to urban aras has been found in all landholding size groups. This was an important component of regular supply of land [as in Basu 1986]. Sale of land to start non-agricultural activity has emerged as another component of regular supply. Of course, this component is small and yet uncertain. It was found among the medium and large farmers who can take risk and can mobilise fund for new business.

A number of households with lump sum cash earning from service or other income have converted these earnings into a stable form of property by purchasing land [Sen 1981, Platteau 1990]. Many households, that could manage fund from the informal credit market have supplemented this source for land purchase. Given the imperfection of the credit market, it was the collateral rich and therefore creditworthy households who could mobilise the funds. On the other hand, the collateral poor households were left out from getting informal credit and as such were not able to purchase land unless they had money

from the service sector. Clearly the credit market imperfections were reflected in the land market as argued by Platteau (1990).

There was wide variation in the price per unit of land sold during the period. The impact of green revolution and diversification of rural economy due to government intervention have been reflected in the rising price of land during 1970s and 1980s. The average price of land rose modernly during 1970s and later period. But there was wide variation in the price of land during the period of study, especially during the early 1970s.

The regression analysis clearly revealed that the variance of land prices of land stemmed from differences in the characteristics such as site, relative location, and the time of the sale of land. About 70 per cent of the variation in the land price could be explained on that basis.

#### Notes

[I am thankful to Kaushik Basu and Jean Dreze for helpful comments and suggestions on an earlier draft of this paper. I have also benefited from discussion with my colleague R S Rao. I express my thanks to Mahipal Yadav, Sunder Singh and Binod Sharma for helping me in collecting data for this paper. I am thankful to S K Padhi for computation and typing. I am alone responsible for any error.]

- 1 A distress sale is involuntary when a household does not have a reasonable alternative option while deciding to sell a piece of land.
- 2 Even if some uncertain channel of investment is available the farm households who are mostly illiterate and not acquainted with such activity may prefer the current and stable asset holding rather than the new uncertain one [Desai 1984].
- 3 It is difficult to synchronise the time of borrowing from the formal credit sector and the time of negotiation for the purchase of land, as obtaining loan for long-term purposes including for land purchase, is time consuming due to cumbersome bureaucratic procedures [Adams and Nehman 1979, Sarap 1991a].
- 4 Raj has argued that ownership of landholding of even fairly small size provides some kind of insurance to families that are dependent on finding adequate wage employment and form the hard core of rural poverty [Raj 1990].
- 5 Such high personal valuation on land is based on two interrelated considerations. (i) He would place a personal valuation or price on the land which is high enough to give him alternative source of livelihood as rentier. The fact that typically the market value is considerably lower than this is of no consequence in his personal calculation. This is because he is primarily concerned with the question of assured livelihood. Further, the same piece of land can produce different rates of surplus or net income over necessary costs, depending on the intensity of its use. This, in turn, is largely influenced by the particular organisation of production. For instance, a small farmer with intensive use of family labour can generate an income stream which can provide him livelihood. In that case the personal valuation he would place on such a piece of land would correspond to a price which is at

- least high enough at the existing rate of interest to earn him roughly the same stream of income [Bhaduri 1983: 72].
- 6 It is to be stressed that a land mortgage may not be always as interim sale.
- 7 However it is to be stressed that the farm household may not offer a piece of land even for mortgage if he has alternative collateral which is acceptable to the lender. For instance, in a study of 166 farmers drawn from different locations of seven districts in Punjab (India) [Chatha et al 1991], only 6.63 per cent of them had resorted to mortgage during the period 1981-1990. According to this study the lower turnover of mortgage was possibly due to the fast declining value of money, increasing alternative source of credit and higher expenditure on registration deeds.
- 8 For instance, a household which migrates to an urban area may like to sell its land once and for all [Rao 1972].
- 9 The terms and conditions of mortgage are influenced by a number of factors including the purpose and the lender's strategy as to whether he is interested to earn interest income from giving loan or interested in the default of the piece of collateral [see Sarap 1990a] in the latter case, he may agree for a larger amount of money, on a piece of land, with the hope that the borrower may not be in a position to recover the piece of land. For evidence on land default to the lender [Barooah 1980, Darling 1977, Mukherjee 1985; 56]. If the intention of the lender is to precipitate default, then the difference between the price per unit of land for sale and the price per unit for mortgage may be low (Table 8) The quality of land, its location from the lender's point of view may also influence the terms of the mortgage.

Source Gazetteer, Rohtak District, 1909 and 1936; Part II Statistical Table, Government of Punjab, Lahore.

10 There were many laws relating to land transactions. For instance, Punjab Land Revenue Act 1887; Transfer of Property Act 1872; Indian Limitation Act, 1963, article 90, to mention a few. The intention of these acts were to reduce the fragmentation of land to different persons through sale of land. But the manifest function of these acts was in fact a deterrent factor for the seller of land. Given such provisions there would be legal dispute between the buyers on the one hand and blook

- retation/co-sharers on the other, in recent past (1987) some acts have been amended and the right of redemption is confined to co-sharers and not to the blood relations. But even now such acts may work as a deterrent factor for land sale.
- 11 For instance, the relatives/caste fellows of the seller may persuade him to sell the land to a relative if he is determined to sell. In that case the competition among the seller and the buyer will be minimised. The price of the land may be lower in comparison with a situation in which there is free competition.
- 12 As such the number of transactions on the land mortgaged were an underestimation because some of the households which had mortgaged land but repaid the loan and got back their ownership rights may have been left out.
- 13 During the period of our study some plots were sold by the ex-dwellers of these villages who have migrated to town/other villages. Since the land and other details of these households are not available the tabular analysis is confined to the transactions of resident households only.
- 14 Households with ownership holding up to 2.50 acres have been defined as marginal farmers. For small farmers the ownership holding was from 2.51 to 5 acres. It was from 5.01 to 10 acres for medium farmers and from 10.01 to 20 acres for large farmers; and 20 01 acres and above for very large farmers.
- 15 The amount of land purchased (310.69 acres) by these households was higher than the amount of land sold (255.62 acres). This is due to the disposing of land by the erstwhile residents who have migrated to urban areas and other villages.
- 16 This is due to lack of accumulation of funds on the parts of many households. If the capital market is imperfect, then it will be more difficult for such households who have no access to credit market. This will be discussed later in this section.
- 17 Given the choice a household will try to sell that piece of land which he prefers less. If he does not find a huyer for this plot, he may offer a better quality plot in case the demand for funds is inelastic and the amount is lump sum. Other things remaining same, a buyer will prefer a piece of land which is fertile, or near his own plot, or near the village. This will reduce the transaction cost of cultivation in case the buyer has no land before the purchase, his preference for a piece of land will be dependent on the availability of land.
- 18 Besides, there may be problems of supervision and effective control of labour in the case of large sized holdings [Sen 1981, Platteau 1990].
- 19 It is noteworthy that even to buy a small piece of land a household requires lump sum amount and has to arrange the fund within a short pen xd.
- 20 Households which are currently in service generally lease out their land in the village and earn rental income. Enforcement of personal property right in rural society is not difficult or costly because of family/caste connection. By frequently visiting the village such households enforce their rights over their land as well as supervise/monitor the tenants.
- 21 Only marginal farmers have resorted to mortgage of land in the informal credit market to purchase land.
- 22 There has been a lot of historical evidence of land transfer to moneylenders in the region of

our study in the first part of this century. See for instance Darling (1977), Chowdhry (1984), Guha (1987: 128) to mention a few. Even in the case of land mortgage the involvement of traders/moneylenders is negligible. One of the important motives of the mortgagee is to expand the size of the operational holdings for cultivation to utilise the surplus manpower/ tractor/surplus fund, etc. For instance, out of the total, 58 plots were near the village, and about 39.66 per cent plots were near the mortgages. If the land is not irrigated it may be near the buyer or near the village. Out of the 58 mortgaged plots, 5.17 per cent satisfied all the three attributes, 34 48 per cent plots were near the buyers and irrigated. All these attributes are helpful to the mortgages for better yields of crops and to reduce transportation cost of cultivation.

Global connections.
Or leadership that ensures greater participation in international markets.

New India has remained a truly multinational insurance company since inception

Today with a presence in 23 countries. New

India is serving the insurance needs of expatriate indian communities

Naturally New India's overseas premium income has been growing steadily. With nearly 60% of its foreign business coming from Japan UK and other developed countries.

Back home, the era of globalisation is bringing India closer to the world.

In this new milieu. New India's package of covers and expertise in international insurance are providing a vital edge. By offering the kind of security and support necessary to promote India's international trade.

Keeping in touch with the latest insurance techniques. Earning valuable foreign exchange

No wonder New India remains the leading general insurance company in India

#### **Knowing New India**

Global premium income No of offices

No of employees No of policy covers **1993-94** Rs 1616 crores

# **Designing Financial Services for Rural Poor**

## **Retooling Rural Financial Institutions?**

#### K Kaladhar

Requirements of financial services for poor rural households encompass consumption smoothening, human capital formation, production and investment credit and insurance, in addition to savings facilities. While the informal sector provides most of the services, the formal rural financial institutions have inappropriate tools and perspectives in delivering the services. Unless institutions retool themselves by focusing on a rural household's economy rather than limiting themselves to activity linked lending, they cannot be successful in delivery of financial services.

IN the recent past, the debate on rural financial institutions (RFI) has been focusing on analysing reasons for 'successful' performance of such institutions more from operational perspectives and away from macro-economic variables [Yaron 1992] In the 1960s, 1970s and 1980s analysis centred around problems stemming from low interest rates or subsidised credit, supply leading finance, government owned and expanded financial institutions [Adams et al 1984]. However, now, the emerging research on rural financial institutions shows some of the operational elements that have been relevant to successful performance such as organisational culture. informational asymmetry, etc. In this paper it is proposed to examine the developments that have taken place, synthesise the learning and develop an operational framework for implementation in the Indian context with respect to formal rural financial institution system.

The rural poor, especially women, commonly have restricted access to financial services expected to be given by the formal rural financial institutions. The Indian perception has been that due to lack of adequate network of such institutions, the inaccessibility has been further strengthened. As a remedial measure the national government assisted by donors have envisaged, substantially in large-scale, formal regulated programmes emphasising more credit to poor in rural areas. In the process huge bureaucracy has been built-up for the purpose of purveying credit to rural poor. The financial programmes launched by the formal institutions had other assumptions such as a low rate of interest, purpose linked credit, formal project appraisal, etc, with a view to reaching the benefits via income generating activities, to the rural poor

#### PROJECT APPROACH TO LENDING

One of the central pivots on which the credit institutions were built was the World Bank's approach to developing rural poor, viz, project approach. The project approach was layered into definite sequences with identification of the activity(ies) in the first

phase, followed by formulation, appraisal. implementation, monitoring and evaluation phases. This was called project cycle [Baum 1978]. Project approach envisaged a detailed project appraisal involving calculation of rates of return and financing the best of the projects for the purpose of generating adequate income to the rural poor. The focus under the approach was more on the purpose/ activity that was expected to 'help' the poor rather than on the poor themselves. In the process, during the 1960s and 1970s very many rural development projects in terms of sectors such as plantation, horticulture, irrigation development, animal husbandry development projects were appraised and sanctioned by the World Bank for implementation through formal rural financial institutions. In addition, functional areas such as extension, credit, etc. also received widespread importance. Among these projects, primacy was accorded to rural credit projects under which the elements of project appraisal were subjected to analytical rigour and rates of return were calculated both under economic analysis as well as financial analysis. Credit was to be purveyed under such projects to rural poor for various activities such as minor irrigation, animal husbandry, plantation and horticulture, etc. Each of the activities was analysed in detail in terms of costs and benefits and the rates of return were calculated accordingly. If the rates of return were above the given cut-off point, then the projects were accepted for the purpose of financing under the project.

Under the system, production-oriented lending had taken roots with elaborate sequentially designed procedures being observed by rural bankers. Some of the characteristics that were developed and stabilised over the years were activity/ purpose centred. Technically feasible sizes were determined (e.g., two milch animal unit, one hectare plantation of oranges) with the objective of achieving financial viability. Farm budgets were designed along with farm models containing extensive analysis on financial and economic aspects. Repayment would be fixed in suitable instalments over the economic life of activity, after accounting for grace/gestation period, out of the income generated because of the activity. Thus, rural financial institutions were to identify activities keeping in view the potential of the area, formulate and appraise farm budgets and farm models (unit costs), implement (advance loans) monitor and then evaluate. An activitywise areawise (villagewise) credit plan would be prepared for the purpose under the dispensation presently called 'Service Area Credit Plan'. The Service Area Approach emphasised the project approach at the micro-level (branch level) with branch manager as the focal point for credit based development of rural poor residing in the service area comprising on an average about 15-25 villages.

Coinciding with the project approach to lending, another approach developed focusing on the role of finance in economic development, whereunder the concept of fungibility of money was propagated which theorised that money makes it difficult to pinpoint exactly which borrowers had spent for what. For example, a borrower who has been financed for purchase of livestock, perhaps could have used, actually, the savings which he/she has and used the loans taken under the project for the purpose of financing a wedding or any such social ceremony. Another use for which loan could have been put to may have been immediate debt payment or meeting consumption needs. This was expected to happen inspite of postloan sanction and disbursement supervision with a view to ensuring 'end-use' of loans. The borrower, accordingly, would perchive the loan funds as an additionality to his total budget and it would be difficult to attribute the benefits to investment in a production activity as envisaged under the project to the loan funds alone. In other words, as long as a rural household's financial budget permitted repayment, given its priorities, the repayment would occur irrespective of the success of the investment loan. In addition, it also pinpoints the futility of focusing on income generation exclusively out of the investment and repayment as a proportion to the income generated. In other words, by concentrating and analysing the purpose or the activity alone, the repayment need not occur [Pischke and Adams 1980].

We will first examine the impact of such thinking at the macro-level, i e, at the level of World Bank which has been in the centre stage in propagating the project approach to lending. The issue of current practices in project appraisal was examined and the conclusion that was arrived at was "we have found that the extent to which (social cost benefit analysis is) used and (has) real influence is not great, even in the World Bank" [Little and Mirrlees 1991]. This observation by Little and Mirrlees, considered the fathers of the project appraisal, comes as a shocking statement and leads us to raise two broad questions [Shantayanan et al 1995]. (1) What is the proper role for project evaluation in today's world? (2) How can we make the project appraisal ensure high quality projects?

When Little and Mirrlees wrote the Manual of Industrial Project Analysis in 1969, the governments were expanding public investments rapidly and much of that investment was in industry and related sectors. During those decades there were major distortions arising from trade policy and exchange rate policy amongst the most developing economies and for the purpose of removing this distortion the focus was on techniques such as border prices and conversion factors. Another factor that had sustained project appraisal in those decades was the calculation of the rate of return for a public sector project. The same technique also was sought to be applied to rural development projects.

Today, in the latter 1990s, governments of the developing countries are reducing their role, going ahead with privatisation of public enterprises followed by gradual removal of distortion in the trade policy and exchange rate systems. In addition, the concern now is focused on whether a project ought to be in the public sector at all or not. This has led to the posing of a counterfactual: what would the world look like in the absence of a project. In other words wherever there is a private sector alternative to public provision, encouragement should be accorded to the private sector alternative.

The World Bank, thus, over the years is gradually shifting from activity specific project appraisal to that of sectoral and public expenditure analyses or what is called structural adjustment lending. For example, the agricultural expenditure review of India carried out by the World Bank in 1993 [Pradhan and Pillai-Essex 1993] examined several agricultural programmes as projects and calculated their minimum rate of return. It concluded that two programmes - a fertiliser subsidy and a crop production scheme - had a zero rate of return because there was no justification for public provision of these goods. Yet the bulk of the Indian government's expenditure was going to these two schemes. Interestingly, the study also pointed to the high rates of return in ground water irrigation and extension services recommending a reorientation of public expenditure in that direction. This approach actually goes beyond setting a good foundation for subsequent appraisal. It also improves the overall quality of the sectoral investment programmes.

Concurrent with the shift of focus of the World Bank to structural adjustment lending from project-based lending, within the project cycle there have been qualitative changes in various phases emerging with the experience into 'new' project cycle. The Bank's evaluation suggested that when development projects perform poorly it is usually for one or more of the following reasons: (i) Beneficiaries do not participate sufficiently; (ii) borrowers are not committed to project goals; (iii) risks are inadequately assessed and managed; or (iv) capacity building was separately pursued through technical assistance programmes, etc. The proposed new project cycle [Picciotto and Weaving 1994] now has (1) listening (2) piloting (3) demonstrating and (4) mainstreaming as different phases.

Under the first phase, viz, listening, the central role of the borrower and the participation of potential beneficiaries, right from the start, symbolises the learning dimension of projects as against 'identification' - a term suggests a visual selection of physical goals or focusing on specific activities such as minor irrigation, animal husbandry, etc. The second phase, piloting, is geared to exploring alternatives identified at the learning phase and objectively assessing risks through participatory methodology. The third phase is demonstrating, i.e. providing opportunities to fine tune and adapt project concepts to ensure a satisfactory development impact. The fourth phase, mainstreaming, aims at achieving the overall goal of credit-based assistance, viz, institutional learning and ensuring a lasting impact on the country's policies, practices, technologies and skills. The new cycle thus comes to fruition with largescale adoption, mainstreaming, of methods, techniques and programmes pioneered during the pilot and demonstration phases.

Another critical view on the traditional cost benefit analysis is seen from its inability in developing capabilities of rural poor and building the same into cost benefit analysis as presently practised [Clements 1995].

The existing literature on economic cost benefit analysis seeks to exclude the main factors that affect the rural poor in terms of improvements in nutrition, health, education, etc. Under the approach titled 'capabilities approach to project analysis' (CAPA) capability is looked at not on the income or public services, a person has access to, nor

on the particular choice, plans and the strategies a person makes but rather on the range of choices that are available to the individual [Sen 1993]. Undernutrition and poor health restrict this range of choices in a direct, physiological manner. Three kinds of information should be considered under CAPA for indicating benefit levels. The first is quantitative information collected by and for the project, normally on project inputs and on changes in the beneficiary population's capability standards. Second, benefit estimates may be assisted by outside studies bearing on the connection between project inputs and population capabilities. Third, there should be some scope for project staff and agency representatives to contribute to benefit estimates based on their observations and opinions.

This suggested approach, viz, CAPA has several problems for operating bankers at the field level. They neither have time nor skills for incorporating these three elements into assessing the credit demands and thereafter taking a decision in the matter. While conceptually the approach is sound, operationally it is very difficult to implement at the field level.

The above debate leads us to the conclusion that the World Bank, from a commodity/ sector-based project lending approach has gradually shifted to structural adjustment lending under which the macro-economy as a whole is taken into account for assessing the effectiveness of investment. The different phases under the traditional project cycle have also given way to the new project cycle with shifting of focus from activity to the rural poor or the participant in a development project. This debate gives rise to the question whether the shifting of focus in policy perspective can be applied at the beneficiary level or at the level of the rural poor in terms of looking at the economy of the beneficiary. This means that instead of focusing on the financing of the activity alone and determining the cost and benefits thereunder, we have to look at a rural household's economy at the family level and then determine what kind of credit packages need to be devised. This calls for having a fresh look at the way the credit is seen from the perspective of rural poor and tailoring financial services delivery accordingly.

## FINANCIAL SERVICES FROM PERSPECTIVE OF RURAL POOR

In traditional approach to rural finance, the production side of rural farm households is generally seen as providing the logic for rural credit. What is forgotten in the whole process is the poor household's demand for financial services relating to consumption smoothening, human capital formation, off-farm income generating activities, insurance and savings services [Zeller 1995; Zeller,

Von Braun, John and Puetz 1994]. In a study conducted for the World Bank, the nature of demand for financial services by rural poor in India was assessed through a client survey [Mahajan and Ramola 1995]. It was found that in terms of current usage, the priority across different types of financial services among the rural poor was consumption credit, savings, production credit and insurance. Consumption constituted two-thirds of the credit usage, the rest being for production credit. Consumption included illness, household expenses during the lean season. Informal sector met consumption requirements at a high rate of interest, with formal rural financial institutions meeting two-thirds of production credit requirements.

The usage of financial savings is low by rural financial institutions with rural poor themselves assessing a large gap between their current savings and potential savings. In all, savings accounted for 5 per cent of the income and about 10 per cent of annual credit usage. The usage of insurance services was very low.

Under production credit, many had received loans linked to government poverty alleviation programmes such as IRDP after accounting for out of pocket costs, payments to middlemen, price difference of assets received as loan in kind vs the cash price in the market, wage loss, etc.

In the delivery of financial services, the borrowers had opined in another study, that the attitude of the banking officials was indifferent to them [Rajasekhar and Vyasulu 1991]. That obtaining a loan is a complicated and lengthy process was evident from the study, in addition to the finding that the time taken to get a loan sanctioned was inversely related to the size of land holding. Added to that, the loan amounts were inadequate. It was also felt, as a widespread problem, that it was better to obtain a loan from a moneylender than to go through the ordeal of bank procedures [Gupta and Shroff 1990]

In the Indian context, provision of credit to the poor and marginal farmers was constrained by lack of access in view of collaterals, low interest rates, leading to rationing of credit to wealthy rural clientele. followed by various systems and procedures that were inappropriate for the rural poor The credit needs of the poor as seen by them [MYRADA 1992] indicate that they require small but regular and urgent loans for consumption whereas their options were restricted to IRDP or similar programmes designed and approved by the government. Small loans for consumption were readily available from money lenders who also placed the poor on the track of increasing debt and bondage which went rapidly downhill On the other hand, banks were not willing to lend small amounts nor would

they entertain loans for consumption, even though it was obvious that the largest number of loans was taken for this purpose. The formal rural financial institutions also could not give any loans quickly when needed. Another practice was adoption of standardised cost and estimates often on the grounds of feasibility; these amounts were generally larger than required by the people. For example, when farmers in one area. where the water table was high, needed approximately Rs 3,000 to sink an open well, the bank insisted on providing the standard rate of Rs 9,000. There are other examples where the requirements were higher than the standardised cost or what is known in the banking system as 'unit cost' There was, thus, no mechanism to fine tune the size of projects and estimates to the micro situation. This is relevant to the context of rural household's economy mentioned earlier. In several cases the schedule of recovery design by the bank did not conform to actual trends in returns. An interesting case of difference in recovery schedules concerned milch animals. It is well known that in the summer the milk yield falls, yet the recovery instalments required by the bank remain constant, instead of adjusting to the actual trends in milk yields. Another example of inappropriate recovery schedules was the practice of linking recovery with harvest time on agricultural loans to marginal dry land farmers - the core of the rural poor. The majority of them consume over 80 per cent of their produce and could not possibly repay loans from sales of the remainder. The schedule of recoveries could not be disturbed due to changing situations as in one example a member of group stood for village elections who had borrowed for purchase of a cow from the group; the group suspected that he would sell the cow to raise funds for the election so they seized it till the elections were over. The rural financial institutions were pre-occupied with viability. For example providing a poor woman with 10 ewes and one ram which usually failed to earn adequate returns according to schedules since it pre-supposed that the woman was doing nothing prior to this project. Managing a 10+1 unit is almost a full time job requiring her of giving up other wage opportunities which provided her daily needs in order to manage the sheep unit. Thus, the rural financial institutions ignored manageability in the process of determining viability. The above illustrations indicate the inappropriateness of the strategy and systems and procedures followed by the formal rural financial institutions.

Approach to Delivery of Financial. Services by Informal Sector

Given the paradigm of rural poor perceptions and the inadequacy of formal

rural financial systems in meeting the demand with all its structural requirements, how the informal sector, including the self-help groups, is catering to the rural poor is dealt with below. The evidence with regard to the approach or 'how' the financial services are delivered is linked directly to the methodology of credit rationing employed by the informal sector.

The determinants of credit rationing centre around informational asymmetry between lender and borrower [Stiglitz and Weiss 1981 Heading to lenders demanding collateral or charging higher rates of interest. Collateral requirements have been identified as a major determinant of the lenders' decision to ration loan demand [Binswanger et al 1989]. Informal lenders on the other hand, often use collateral substitute. Third party guarantees, trade contracts and threat of loss of future access to credit are common devices in informal contacts [Adams and Fitchett 1992, Binswanger et al 1989]. In a study conducted in Madagascar on determinants of credit rationing by both informal lenders and formal credit groups [Zeller 1995] several findings are of relevance to the Indian context. The credit rationing by informal lenders was determined by age with older individuals more likely to apply for credit, with higher age leading to decline in credit obtention. Secondly, the number of years of schooling has a positive effect on loan application since it augments, other things being equal, returns on capital and therefore credit demand. Thirdly, the poor, proxied by occurrence for wage income, significantly rely on informal credit for consumption smoothening with a duration of two months which is easily obtained with little waiting time. Fourthly, it is the head of the household who is more likely among the members to ask for a loan. The fifth determinant relates to sickness leading to the demand for credit for financing medical care. In contrast to these determinants which trigger seeking credit from informal lenders, the decision taken by the formal groups is to approve a loan request based on the health of the applicant household (which is an indicator of repayment ability) in addition to existing indebtedness in the informal sector while the outstanding debt taken from the formal sector does not impinge on the rationing process.

The pilot project on developing linkages with self-help groups currently under implementation in India also gives useful insights into the rationing process or the methodology of appraisal being followed by the self-help groups [NABARD 1995]. The groups' initial source of fund was savings supplemented later by credit and the activities financed were need based even while self-help groups adopted a flexible approach. Interest rates charged were varying and market-related; shorter repayments were

fixed, as against the procedural requirement of allowing longer repayment period by formal rural financial institutions, keeping in view all available sources of income instead of limiting to income generated out of the financed activity alone. This facilitated members taking more than one loan during a year. Flexibility in norms of lending was observed on case to case basis with less importance attached to documentation. In case of emergency/situations of distress, a second loan was also allowed while the first loan was yet to be repaid. Penal interest for delays in repayment of instalment was applied flexibly. Meetings of groups were conducted regularly which served as a formal base for exchanging information, completing documentation, etc.

In the context of the above it is useful to look into the totally new dimensions thrown up in respect of Bangladesh Grameen Bank, a formal rural financial institution, in managing credit for the rural poor and the reasons for its success [Jain 1996]. The study, startlingly, indicates that the Grameen Bank in practice does not enforce its acclaimed policy of making five-member groups jointly responsible for repayment of loans. Contrarily, the success of the Grameen Bank was posited to a combination of several organisational policies which were designed to steer the behaviour of its large number of functionaries and borrowers along a "credit responsive mode". The elements of credit responsive mode centred around various organisational levels and at each level different 'credit responsive paths' have been taken ensuring in an overall context, the success of the bank. At the local village level the banks credit policies provided a set of neoclassical (dis)incentives to align the selfseeking behaviour of borrowers along a credit responsive path. The important activity of group/centre was meant to develop a culture wherein both members and the bank functionaries followed the bank norms implicitly and as a matter of routine. The main purpose and function of the groups and centres was to foster this culture by enabling routine repetition of ideological behaviour by all the members week after week, 52 times a year which made it a 'cultural habit' for each individual to follow bank norms

In respect of branch operations as well as at the level of area office the characteristics that were observed related to routineness, reliability in service delivery, demonstrable honesty and error-tree performance in addition to repeated supervision and crosschecks. In summary, in development banking not only do the determinants of borrower members' behaviour have to be in place, but the determinants/stimulants of bank functionaries performance also have to be properly aligned. The Grameen Bank through

its staff incentive policies could broadly align its staffs' self-seeking behaviour with the bank's norms.

SUCCESSFUL RFIS FROM INDONESIA

The relative success in the provision of financial services to the rural poor, indicated by Indonesian experience (Chaves and Gonzalves-Vega 1996], is also noteworthy for the Indian context. The various Indonesian RFIs have fostered intensive inter-action of two types of agents, viz, those who have the information and those who have the resources, in the provision of financial services to the rural poor. Such inter-action has been at the foundation of the success of the Indonesian rural financial institutions. The individualised approach instead of the group approach in the context of Indonesia proves that joint liability or peer pressure would result in extra costs, and moral hazards for the group members, leading to borrowing on individual basis. This was also proved in the case of Grameen Bank example cited above.

All the steps necessary to complete the financial transaction are undertaken locally. In most cases the client does not have to leave his/her village. Further, local decision-making and character-based lending (when no collateral is required) allow for the rapid disbursement of loans. Most of the time funds are available when needed, with no particular restrictions on end use. Most importantly, loans are granted on individual basis.

To overcome information asymmetry which is the heart of the rural financial market problem, the Indonestan experiment resolved through a system of incentives (performance-based remuneration and efficiency wages as compatible incentives) that has induced a behaviour on the part of

RFI managers consistent with the financial health of the unit.

The role of credit and credit institutions in augmenting production and productivity is well recognised. This approach has resulted in an impressive growth of rural banking in India over the last four and a half decades in terms of outreach, credit disbursement and support to the poverty alleviation programmes. However, the emphasis throughout has been on achieving certain quantitative targets leading to loan defaults and virtual erosion of repayment ethics. The end result was the disturbing growth in overdues which not only hampered the recycling of scarce resources of banks but also affected the profitability and viability of the financial institutions,

Out of the 369 district central co-operative banks, only 171 were operating in profit as on March 31, 1994. The overdues at Rs 3,874 crore constituted 33 per cent of the demand. As regards primary agricultural credit societies (PACS), out of 90,783 units, only 52,211 (58 per cent) had been identified as being viable as on March 31, 1994. Overdues of PACS at Rs 3.875 crore constituted 38 per cent of their outstanding loans. The picture as regards the regional rural banks (RRBs) was no better. During 1994-95, 32 RRBs had made profit while 164 RRBs showed a loss aggregating Rs 423.21 crore. The annual loss increased from Rs 94.05 crore in 1991 to Rs 425.65 crore in 1994-95 while the accumulated losses of RRBs aggregated Rs 1,686.61 crore as on March 31, 1995 (C Rangarajan First Ravi Mathai Memorial Lecture 1996). Similar data for rural business of commercial banks is not available.

The characteristics in terms of internal practices and attitudes among rural financial institutions indicate that they are not suited, structurally, for the delivery of the financial

services to the rural poor [Mahajan et al 1995]. Few products suit rural people's special needs on the dimension of urgency, informality, seasonality, illiteracy and diversity in livelihood. No consumption loans are given while lending is security-based with the insistence on collaterals. Largely, one time loans are given with the poor seen as a social obligation and intrinsically unworthy of credit.

The financial sector reform that is currently under way encompasses the institutional rural credit delivery system. As part of the measures recapitalisation is being undertaken along with other measures such as development action plans, coupled with memoranda of understanding for the purpose of chalking out action-oriented strategies for revitalising the institutions.

However, little attention has been paid to the rigid frameworks that have permeated the rural financial institutions. This is evidenced from the perspectives of rural poor with regard to credit. One point, a central one at that, of importance in the reforms process in respect of rural financial institutions is that unless the rural poor are responded to properly the rural financial institutions will not be able to trigger required impulses and maintain themselves as vibrant and healthy institutions. Time has come to recognise limits of credit as against credit limits [Dandekar 1995]. Based on the experiences outlined above what is required is retooling of the rural financial institutions rather than tinkering at the periphery in the name of reforms.

In addition to the above the Indian rural credit system is characterised by certain rigid frameworks which are inhibiting performance compared to that of informal sector. The elements that characterise the framework and simultaneously inhibit the performance are: unit costs, repayment periods, grace period and/moratorium period, looking at the activity, and confining one-self to the income generation and unit cost from the point of view of activity alone.

If one has to learn the lessons from the practices being followed in the credit management groups or informal lenders what kind of procedural changes can be made so as to bring in the elements of Grameen Bank as already discussed coupled with the effectiveness of the informal sector? It appears that the present activity-based financial relationships need to be given a goby so as to overcome the structural rigidities in approach to rural finance. In the informal sector the lenders always look to the individual and take a holistic view of the cash flows that are being generated by the invidual. In this context, it is useful to recall what was already discussed here with regard to changes in the learning pattern of the World Bank from that of specific project activity to that of structural adjustments lending. It is also useful to recall the present rethinking that is occurring in respect of the project cycle approach from the traditional phases of identification, formulation, appraisal implementation, monitoring and evaluation, to give importance to the 'process' by focusing on (a) listening, (b) piloting, (c) demonstrating and (d) mainstreaming.

Under this process the core focus is on developing and enduring relationship between the lender and the borrower on a long-term basis rather than seeking it as a one shot lending approach. In the light of the above the rural bankers should now realign approach to rural financing whereunder the rural family or the rural household is taken as a unit for the purpose of holistic analysis of its micro-economy.

A rural household or a rural individual will be the focus for delivering financial services. Financial services would encompass different requirements as seen from the household perspective interms of investment credit, production credit, consumption smoothening, human capital formation, insurance and last but not the least appropriate savings products.

The informational asymmetry between the financial institution and the rural household can be overcome by developing long-term and enduring relationships. For the purpose the present methodology of doing banking from the branch premises need to be reoriented. The branch manager assisted by his staff shall have to visit each of the villages under his service area regularly and deliver financial services at the village itself. The visits may be such that each of the villages are visited at least once in 10 days during which time he must mobilise both savings as well as disburse credit.

In the initial stages, say first six months or one year the branch manager shall identify about 100-200 families in a village and develop documentation on each of the families with regard to the family economics, the assets and liabilities position including debts owed to informal sector. This is to be done simultaneously along with mobilising savings from the rural households.

After the bond is established between the branch manager and the family, credit requirements on an overall basis can be ascertained and revolving credit facilities can be granted keeping in view the quantum of requirements. While granting revolving credit facilities the distinction between production credit and investment credit shall be dispensed with. The activities that the borrower proposes to take up shall be assessed by the borrower or the rural household itself and amounts of loans arrived at taking into account consumption smoothening, human capital formation, etc. No unit cost for

investment credit or scale of finance in respect of production credit shall be applicable. The repayment schedule shall be drawn up with weekly instalments and each of the instalments shall be collected during the visits by the branch manager to the village.

The family credit plan under implementation under IRDP needs to be distinguished from the approach suggested above. The emphasis under the family credit plan continues to be 'lending' for two or more activities expectedly bringing the family above poverty line without looking into the compulsions of a rural household's economy. The approach in other words would be in consonance with the clientele requirements with the rural households being the central focus.

With a view to operationalising the rural household approach to financial services a beginning can be made by selecting 4-5 districts in India involving the rural and semi-urban branches of commercial banks. the branches of RRBs as well as the ground level units of the co-operative banking system. For the last 50 years we have been in the first phase of the new project cycle, viz, listening. Having done that, it is rather overdue for getting into the second phase of the new project cycle, viz. piloting It would be appropriate that at the earliest, action is initiated by the government and other connected actors and pilot stage is launched without any further delay.

#### TOWARDS A CONCLUSION

In the context of the problems being faced by the rural financial institutions, both endogenous and exogenous, and with a view to improving the delivery of financial services to the rural poor, several measures are being taken for improving the system. In addition to financial sector reforms at the operational level linkages with informal sector in the form of self-help groups has been established. The developing of linkages with self-help groups which started on a pilot basis sometime ago has now been extended all over India [RBI 96] in terms of the recommendations of the working group set up to examine the issues on the subject. The mandate to extend the linkage project has however, been seen from the point of view of including the lendings to self-help groups under 'priority sector' and building up a database on the lendings through a format. Unfortunately, one of the indicators that is missing in the format relates to data regarding savings mobilisation which is the basis for linking with self-help groups. Several proposals have been made elsewhere for expanding the linking process in terms of improving the resource base of self-help groups, operational 'takeovers' and making the self-help groups agents of formal banking system [Kaladhar 1995]. Coterminous with such efforts there is a need for change from within in respect of rural financial institutions and the changes if not in terms of attitudes, have to come by taking the rural household as the central point for delivery of financial services. By moving away from activity-based lending approach to rural household-based continuous financial relationship foundation the strengthening of rural financial institutions is expected to happen on a more qualitative footing.

### CENTRE FOR STUDIES IN SOCIAL SCIENCES, CALCUTTA

#### **CULTURAL STUDIES WORKSHOP**

The Centre for Studies in Social Sciences, Calcutta, will hold its annual All India Cultural Studies Workshop on 1-5 February 1997 in Gwalior. The theme for this year's workshop is "Culture and Democracy" in which the focus will be on contestations over identity, autonomy and equality in the fields of cultural production in India. The workshop is intended to give young researchers the opportunity of intensive discussion of their work with senior scholars. The faculty will include distinguished scholars from India and abroad. The CSSSC will bear the expenses of travel within India for all participants and will extend full hospitality to them in Gwalior.

Post-doctoral scholars or those in advanced stages of doctoral work and preferably under the age of 35 who wish to join the workshop may apply with c.v. and a description of their current research. Applications are to be sent by **November 30, 1996** to the Registrar, **Centre for Studies in Social Sciences**, Calcutta, 10 Lake Terrace, Calcutta 700029.

# **Rural Credit in VIP Districts**

## A Study in Uttar Pradesh

#### Veerashekharappa

Several studies have found that credit institutions (and therefore institutional credit) are unequally distributed across region and accessibility to timely credit depends often on political intervention. This study attempts to examine the influence of political intervention on the expansion and delivery of institutional credit in two districts of Uttar Pradesh, Raebareli and Sultanpur, represented in parliament by two former prime ministers.

THE major objective of nationalisation of banks was to bring them under the control of government and ensure lending to fulfil social objectives. Afternationalisation banks introduced innovative schemes in their operation and functioning, such as widening the bank network in rural areas, through branch expansion in the rural and semiurban areas: establishment of specialised branches for farm lending; Lead Bank Scheme and District Credit Plans (LBS and DCP in 1969); Differential Rate of Interest (DRI 1972) scheme; Village Adoption Scheme (VAS 1974) and Service Area Approach (SAA 1989). Further, RRBs were established to take institutional credit to unbanked regions of rural areas. Later the NABARD was established to take up the role of a leader in the entire rural credit system in the country. Thus, the banking sector emerged as an important agency in extending rural development through credit.1

Credit institutions, (and institutional credit too), are unequally distributed across regions [Rao 1988], accessibility and timely credit depends on political intervention, particularly for schematic loans. In fact the banking system has become a tool in the hands of the ruling party to canvass for votes [Rajasekhar and Vyasulu 1990].

Against this background, an attempt is made in this study to examine the impact of political power on the expansion and delivery of institutional credit. This exercise has been carried out in two districts of Uttar Pradesh (UP), viz, Raebarcli and Sultanpur. The prime minister represented these districts for several years. The late Indira Gandhi represented Raebareli, and Rajiv Gandhi represented Sultanpur district (Amethi Constituency). They represented the best of what the system can do. Thus, these two districts are an appropriate choice to examine the expansion of institutional credit, viz, expansion of branches, efficiency in credit delivery, etc. For this the data is culled out from secondary and primary sources.3 The methodology used in sample selection for collection of primary data was presented in the appendix.

This paper is presented in three sections, the first section discusses the economic background of the selected districts, the second section documents the development of banking sector, the third section examines the credit delivery system from the borrowers' point of view, the fourth and final section sums up the issues on the basis of observation made in the above sections.

## Physical Features of Selected Districts

Sultanpur and Raebareli districts are located in Faizabad and Lucknow division respectively, and adjoin each other. The geographical area and population of the Sultanpur district is 4436 sq km and 25.6 lakhs respectively and Raebareli district, 4609 sq km and 23.2 lakhs respectively.

Though these districts are endowed with physical and humanpower resources, the levels of productivity and overall production in the districts have been lower than the state average and much lower than the national one. For instance, the workforce in both the districts constitutes 36 per cent of the population with a small variation and most are engaged in agriculture. Within agriculture, the share of cultivators is large and of agricultural labourers small. However, more

than 80 per cent of total working population is engaged in agriculture and allied activities. The sexwise distribution of workers shows

Sources: 1 National Bank for Agriculture And Rural Development Potential Linked Plan Raebareli, 1990-91 to 1994-95, Uttar Pradesh, Lucknow, 1991.

2 National Bank for Agriculture and Rural Development, Potential Linked Plan Sultanpur, 1990-91 to 1994-95, Uttar Pradesh, Lucknow, 1991. that about 50 per cent of males and less than 10 per cent of females are in the workforce in the districts (NABARD, 'Potential Linked Plan Sultanpur 1990-91 - 1994-95', Lucknow, Utter Pradesh). This indicates that presently the opportunities to the women for organised full time and useful employment are very low.

The average annual rainfall in these districts is between 900 mm to 1000 mm with small variation across districts (This is based on 30 years data.) A majority of cultivators in both the districts are marginal and small farmers. A comparison of agricultural censuses data between 1977 and 1981 indicate that the percentage of holdings above 1 ha declined, while that of below 1 ha increased substantially.

Though adjoining, these districts differ in proportion of cropped area and irrigated area to total area and in the consumption of fertilisers. Raebareli district has a higher proportion of cropped and irrigated area then the Sultanpur district (Table 1). The consumption of fertiliser in these two districts is less than that of the state average. On an average, the consumption of N+P+k per hectare of net sown area was 98.6 kg in Sultanpur, while it was only 63.8 kg in Raebareli. Consequently, the yields of the important crops were lower in these districts as compared to the state as a whole.

There is variation in irrigation and sown area across districts but the crops grown are the same in both, viz, wheat, jowar, tur and pulses, which account for more than 50 per cent of gross cropped area.

#### II Banking Infrastructure in Selected Districts

The district as well as the state is served by a fairly good network of banking institutions. In fact, the banking network expanded during post-nationalisation period. The reason attributed are both push and pull factors. The pull factors are the large number of development activities taking place in the district and state,5 which are complementary to each other and contribute to the opening of bank branches. The push factor is the policy decision of the state according to which formal credit is made accessible to all the regions and needy persons. This, policy decision corroborated by the political pressure has forced the opening of branches in the remote and unbanked areas. Thus the pull factor is influenced by the economic advance of the region whereas the push factor is influenced by state intervention<sup>6</sup> and these two factors contribute to the expansion of bank branches. In these selected districts, between 1969 to 1994 the number of branches increased at annual rate of 9.3 per cent (Sultanpur) and 71.2 per cent (Raebareli). The all India level is 746 per cent, in UP it was 1165 per cent,<sup>7</sup> and this has reduced the population per branch. And the number of branches located in rural areas is 66 per cent in UP whereas at the all India level it is 57 per cent (Table 2).

The compound growth rates between 1974 and 1994 brings out that the districts had better growth rates than the state average. According to Table 3, bank branches grew at an annual rate of 9.3 per cent and 11.2 per cent in Sultanpur and Raebareli respectively and similar order is noticed in growth of deposits and advances. (In 1980s

the political intervention was noticed in expansion of branches and in advances.) Bu Allahabad district has bettered these district but due to a higher base the compound growth rates are shown as being low.

Table 4, shows the share of RRB. (branches, deposits and advances) in the total bank network. Sultanpur district has a better network than Raebareli. The reason attributed are the change in politica leadership in the district, the number of developmental and popular schemes take up simultaneously in the district. As a par of it the expansion of RRB's branch networl

took place in a large way. Thus, area-wise
Sultanpur district is small but the density of
bank branches per sq km is high, in fact
political pressure forced the RRB to open
more branches in unbanked areas including
remote areas, where commercial banks are

remote areas, where commercial banks are reluctant to open their branches. (This observation was made during the field work, while discussing with chairman of RBI. The number of branches opened during preelection period is high compared to other periods.) In fact, state force is nothing but a proxy for political power in the district.9 The banking infrastructure in these districts also shows that the number of regional rural banks is large. Raebareli commercial bank branches are 47, RRBs branches are 74 and co-operatives 27 and land development bank branches seven. In Sultanpur district, commercial bank branches are 36, RRBs 93, district co-operative banks 25 and land development banks 25 ('Potential Linked Plan Raebareli', NABARD, Lucknow, Uttar Pradesh). The expansion of commercial

banks in general and RRBs in particular took place during the second half of the 1980s.<sup>10</sup>

Having noticed the quantum of credit in earlier paragraphs, we now discuss the purpose of advances. The purpose-wise amount outstanding is presented across districts and state in Table 5. The figures show that during 1974 the outstanding amount concentrated against the industrial activity, by 1994 though the proportion reduced, the same activity still holds a large share of the amount, the decline being attributed to the large amount diverted for schematic lending. The compound growth rates show that Sultanpur district has a higher growth rate than the other districts. This indicates that Sultanpur district got special consideration in the expansion of branch network as well as in making advances for different purposes. During the 1970s credit is concentrated for industry, but after Rajiv Gandhi's entrance in the district the credit structure changed along with the credit flow to industry. Popular schemes also began to benefit in a large way.

# DEPOSITS GROWTH IN SELECTED BANK BRANCHES

The growth of deposits in the selected banks in Sultanpur has been impressive. The amount of total deposits grew from Rs 1013.6 lakh in 1984-85 to Rs 2222.98 lakh in 1988-89 at an annual compound growth rate of 22 per cent. Such a rapid growth was mainly due to an increase of amount kept as time deposits which grew, at around 24 per cent per annum (Table 6). The growth of deposits in Raebareli was rapid, between 1984-85 and 1988-89, the amounts of deposits increased from Rs 1281.36 to Rs 2829.48 lakh at an annual compound growth rate of

| 1988-89     | 44118        | 24205          | 54.86    | 43291   | 25559    | 59 04    |

22 per cent. In this district also, the amount kept as time deposits accounted for much of the growth. As in Sultanpur, the amount of deposits in RRBs also increased at a faster rate.

The growth of disbursements in district is 19 per cent per annum during the period 1985-86 to 1987-88 (Table 7). On the other hand, the growth of outstanding advances in the selected branches is comparatively less. The total amount of outstanding advances in Sultanpur increased from Rs 213.68 to Rs 302.78 lakh during the period 1984-85 to 1988-89. The amount of outstanding advances increased at annual growth rates of 9 and 18 per cent in Sultanpur and Raebareli respectively. In both the districts, the bulk of the lending is going to the priority sector.

There is no consistent pattern in the recovery of loans by the selected banks in the selected districts. Table 8 reveals that the percentage recovery of total demand in Sultanpur increased (with fluctuations) from 52.29 per cent in 1984-85 to 59.04 per cent in 1988-89. We should term such an increase in recovery as impressive because the total demand itself doubled during this period. Moreover, the adverse political environment did not seem to have much of an impact on the recoveries. This is a positive aspect. Yet another aspect is that the percentage recovery of overdue demand has been increasing steadily, barring the year 1987-88. In contrast, the percentage recovery of current demand had marginally declined. At the macro level, the percentage recovery of loans increased between 1985-86 and 1987-88, though the percentage recovery of loans across various types of banks fluctuated.

Regarding the performance of individual banks, there is no consistent pattern. The recovery performance of commercial banks and RRBs is similar to that of all the selected banks in the district. To put it differently, the percentage recovery of commercial banks and RRBs had improved significantly. The percentage recovery of both overdue and current demand in these banks increased and it is gladdening to note that the percentage increase in the former is relatively high. However, the percentage recovery of total demand in LDBs and PACs had marginally declined during this period. Nevertheless, the percentage recovery of demand in these banks (especially in PLDBs) is much higher as compared to commercial banks and RRBs. A sudden decline in the percentage recovery of total demand in PACs in 1988-89 is probably due to the adverse political. environment (Table 8); this was the loan waived era.

In Raebareli, the recovery percentage was fluctuating during this period. The recovery of total demand in all the selected banks increased by nearly 8 percentage points

between 1984-85 and 1985-86. However, the recovery percentage has been steadily declining since then. This decline was mainly due to a lower recovery of overdue demand (Table 8).

There is no consistent pattern in recovery of loans by various banks. The recovery percentage of total demand in RRBs has consistently increased mainly because of better recovery of overdue demand. The overall trend in percentage recovery of current demand is one of declining. In other banks, the percentage recovery of total demand marginally increased (with fluctuations) during the period 1984-85 to 1988-89. LDBs account for bulk of the total demand in the selected banks and a better recovery of loans in these banks resulted in better percentage recovery of loans in all the selected banks (Table. 8).

Table 9 reveals that the overdue increased in both the districts. The growth is relatively high in Suitanpur. As far as agewise overdue is concerned, the overdue falling in the category of 0-3 years consistently declined in Sultanpur, while those falling in the category of more than six years marginally increased. The percentage of overdue in the age group of three to six years rapidly increased.

In Raebareli, there is no consistent pattern. The percentage of overdue in the category of 0-3 years remained almost the same during this period, while there is an overall decline in the overdue falling in the age group of three to six years. The percentage of overdue in the age group of above six years increased, albeit with fluctuations (Table 9). Thus, while the increase in percentage of old and sticky overdue is significant in Raebareli, it is only marginal in the Sultanpur.

# III Borrowers and Credit Delivery System

For analysis of the credit delivery system, we collected information from 87 borrowers in Sultanpur and 97 in Raebareli on their views on the existing credit delivery system

(Table 10). This information is analysed in the ensuing paragraphs.

The sources of finance are presented in Table 11. In fact the sources show the accessibility of the borrowers to different

credit agencies, which do not have their own savings. The proportion of borrowers who met the cultivation expenses from their own savings is 25 per cent in Sultanpur, while it is only 10 per cent in Raebareli. More than 52 per cent of the borrowers in Sultanpur district borrowed from the banks and cooperatives for cultivation expenses. Around three-fourths of total borrowers in Racbareli obtained loans from banks and co-operatives for meeting cultivation expenses. The proportion of borrowers who obtained loans from money lenders, banks, co-operatives is relatively more in Sultanpur than in Raebareli. However, a majority of borrowers in both the districts depended either on their own savings or banks and co-operatives, but their dependency on money lenders is minimal.

The proportion of loans from credit agencies across districts for doftcrent purposes varies. People mainly borrowed from institutional credit agencies loans for crops followed by other agriculture and allied activities. For small business activities the number of loans in Raebareli is higher than in Sultanpur (Table 12).

To cross check the opinion of bankers on the credit delivery system, we have collected information from borrowers in both the selected districts. Most borrowers in both the districts expressed satisfaction in the credit delivery system. Nevertheless, 40 and 32 per cent of the sample borrowers in Sultanpur and Raebareli, respectively, faced one problem or the other.

With a rapid expansion of the branch network not many sample borrowers have problems regarding distant location and lack of previous experience. More importantly, a significant proportion of the borrowers in the Sultanpur district felt that bank procedures are complicated. About one-tenth of the sample households in the selected districts felt that the attitude of the banking staff towards them is indifferent. However, these problems are less here than in other parts of India, where more than 51 per cent of borrowers experienced problems due to complicated procedures and the attitude of the bank staff [Institute of Social and Economic Change 1991].

A distribution of the total loans obtained by the sample borrowers is presented in Table 14 About 70 per cent of the loans in Sultanpur are disbursed within 15 days. About 23 per cent of the loans took 15 to 30 days to get sanctioned. Only 7 per cent of the loans are delayed beyond one month to get sanctioned. In contrast, the problems of delays in the sanctioning of loans are relatively widespread in Raebareli. Only 57 per cent of the loans are disbursed within 15 days. As many as 17 per cent of the loans took more than one month time to get sanctioned. Thus, the problem of delays in

the sanctioning of loans seems to be much more acute in Raebareli district as compared to Sultanpur. In other districts loan sanction is delayed much more to this.
